How To Setup Pedetor Pain Keylogger 4.X.X (Free Version)

Hey Hackers. ?

Today i am going to show you how to setup the predator pain keylogger :)

First of all, i want to give credits to
NyC.xXBRONX.NyC

For making this awesome keylogger ?

So lets now get started.

First of all, download the builder, it cant be found here:

<https://hackforums.net/showthread.php?tid=1004717> (This is the FREE Version, and i am going to be working with this)

Ok so now you open it, and you get this:

[img]http://img830.imageshack.us/img830/6065/udklipdv.png[/img]

Now fill the info in, like i have done here:

[img]http://img40.imageshack.us/img40/5011/25695536.png[/img]

Interval means:

Time to take the log to be send (i prefer 10-30)

Password:

Your mails Password

Email:

Email adress, to recieve logs.

Smtp:

The "adress" of the mail (the root adress), just use gmail... thats the easiest.

Press next:

[img]http://img708.imageshack.us/img708/6039/80002602.png[/img]

This is the new interface:

[img]http://img535.imageshack.us/img535/5316/34964544.png[/img]

I have filled it out, now do the same (more info longer down):

[img]http://img69.imageshack.us/img69/4926/17666858.png[/img]

File Pumper means:

Extra kilo-bytes or mega-bytes, like if its adobe after effects crack, it should fill a little more than 1kb right?

Block a website:

Blocks a website ??? (i do not recommend doing this)

Icon Changer:

Use an .ico file to change icon of the outcoming keylogger, just google the .ico file you need, or make your own.

Built In Binder:

Bind your Logger to a file, so it opens the file, then people dont know the keylogger is there, they just think it is a program.

Assembly:

Basic Information, like where it is from (only mess with this if you know what it is)

Now the finishing step, click build:

[img]http://img545.imageshack.us/img545/7429/32393006.png[/img]

Continued Below (too many pics -.-)

(2 posts below, j4mmy posted before giving me the chance to post)

J4mmy - March 8, 2011, 5:43 am

Copy+paste much, eh? Atleast it seems badly so and if not, fix your pictures.

Sejskaler - March 8, 2011, 5:43 am

Boom succes:

[img]http://img269.imageshack.us/img269/195/77433558.png[/img]

Ok, now what you do is rename the keylogger to whatever you want, like i have "cheatengine.exe" (oh yeah, it is saved as "server" and is at same folder as your builder):

[img]http://img703.imageshack.us/img703/8319/71974318.png[/img]

That was it, now you just need to spread it.

Goodluck with the hacking ?

I posted this yesterday -.- but got deleted, luckily i always make a copy/paste to noteblock

J4mmy - March 8, 2011, 5:45 am

Well if it is yours, fix the pictures :)

Sejskaler - March 8, 2011, 5:46 am

(Mar 8, 2011 06:45 AM)J4mmy Wrote: [\[CITE\]](#) Well if it is yours, fix the pictures :)

How? i dunno how to fix it :S i use the direct link from imageshack

just reuploaded -.- trying to update thread

edit:
FIXED :D

Sejskaler - March 10, 2011, 7:09 am

guys its ok to reply -.- this have been up for 3 days and already on page 4 :S
Wont this thread live?? O.o

wiezerzz - March 10, 2011, 7:48 am

Let this thread be ALIVE! :D
I will test it out on 1 of my slave's (:
Does Gmail block the email addresses after awhile?

SIM-135152 - March 10, 2011, 10:30 am

Thanks man I looks good.
But are you leeching ?

trueelite - March 10, 2011, 1:10 pm

Is this F.U.D? im guessing not

Sejskaler - March 10, 2011, 1:14 pm

(Mar 10, 2011 11:30 AM)worlddanger Wrote: [\[CITE\]](#) Thanks man I looks good.

I aint leeching? :S i made this tut myself -.-

(Mar 10, 2011 02:10 PM>trueelite Wrote: [\[CITE\]](#) Is this F.U.D? im guessing not
did i write it was? if so i was talking about the private version and am sorry :S

Dunno if they do anymore, but they have done i know ;)

poonser - March 10, 2011, 1:35 pm

is the email & password hidden in the file when built?

Sejskaler - March 10, 2011, 1:55 pm

(Mar 10, 2011 02:35 PM)poonser Wrote: [\[CITE\]](#) is the email & password hidden in the file when built?
I aint exactly sure of What u mean, But No matter What you Can be whaled (thats always a chance
when keylogging)

Riivers - March 10, 2011, 2:48 pm

It's a good Tut but I think Predator is self explanatory. It doesn't have that many functions (free
version) or buttons or something someone who doesn't know what to do couldn't understand.

Sejskaler - March 10, 2011, 3:11 pm

know what to do couldn't understand.

Well... The day i made it, i felt like making a tut... This was so uncommon, havent seen it here so
why not? And some people May not understand. Still we should respect Them and let Them learn,
without complaining....

Well Im going to bed now, Gonna reply other posts that May come, tommorow so have a little

patience ;)

Goodnight everyone :D

lucianace - March 14, 2011, 6:06 pm

can someone PM me with the method how to decrypt the passwords that are coming from the PREDATOR because i keep try and i dont manage to do that.TY

Sejskaler - March 15, 2011, 1:01 pm

just go to crypto.com and decrypt :) ?

Dakaray123 - April 6, 2011, 5:08 am

hi, I opened your keylogger on my computer but entered an email wrong so i get error every few seconds when it tries to send me log. It continues after i deleted server and bind app. Any idea how to stop it ? :D

And one more thing... I'm new to all keylogging thing. I need some more info.

When im done with server i have application icon and server icon on my desktop. what now? i send just application icon to some1 or i need to bind them together or something ? I just sent application and he opened it. No logs on my gmail...

chucksworld - June 1, 2011, 11:32 pm

Very helpful. I'll consider this for next keylogger

infas - June 1, 2011, 11:46 pm

gonna test it, looks nice

Stenography - June 2, 2011, 12:01 am

thank you, great tutorial ..

But the screenshots edit in paint are horrible, you should edit them on sangit.

austin 32123 - July 6, 2011, 1:07 pm

Thanks, great quality post my friend.

Bago47 - September 21, 2011, 4:23 am

Thanks but now it's more like D rather than FUD

legit187 - October 23, 2011, 10:24 am

I've failed miserably, it does send the logs but only from clicks / websites i've used but not a single keystroke in the logs? :(

Oh and it's flaming me this :

""Pidgin stealer was enabled. If you are viewing this message no passwords are being displayed because of the following reason: (1) User has not enabled Saved Password checkbox on Pidgin therefore no passwords are saved in registry for Predator Pain to decrypt. (2) Victim does not have Pidgin installed on his pc. (3) User has downloaded the newest version of Pidgin and has a new encryption the reason this program needs to be updated constantly. Solution: Keylogger will pick up typed passes be sure to check your keylogger logs""

Could someone explain this, i really don't get it, do i have to download something or anything, tried

to search but didn't find anything :/
-THANKS ALREADY :)

cfrs - *October 23, 2011, 11:36 am*

yo thanks so much for this dude. Can't wait to install eet

doerak - *November 28, 2011, 11:09 am*

mmh done now wait to a message with pass from victims :P

Mysterious Mask - *November 28, 2011, 11:12 am*

Thank you, but why this obsession to always do a tutorial on each keylogger that exists? It's always the same!

frank4893 - *June 18, 2016, 2:06 am*

please guys i need help on my predator pain keylogger, after clicking it to test it myself at the first day it was reporting logs to me but after that day i didn't see any logs coming till now, please what do i do?

thrashxl - *June 19, 2016, 6:10 am*

trying to "get" some info, might try this.
