Except for the fact that Farhan's didn't actually work.

He admitted that it was only a source code for people to download and tinker around with.

Lawdy... Well you could encrypt it >.>; And risk someone finding out its a keylogger and face 5-10 in the slammer with a jailmate named bubba. Or you could bind it with a file and then send it. >.>; Hope I helped. lol

Oh and thanks for the release. Cant wait to try it I havent used a decently good keylogger that used gmail in a while. ^-^

Xch4ng3 - July 29, 2009, 2:25 pm

Quick question, does this add to startup?

Co Bullet - July 29, 2009, 2:43 pm

Alright, last stupid question. Does the player have to physically click the .exe for it to work? I haven't used a keylogger before =X

you just write your whole email and password like thisismymail@gmail.com and then the password...

stub is needed for some modifications and settings etc etc

you dont have to delete it

Farhan879 - July 30, 2009, 3:12 am

Does this version records backspace as a weird character or like "[backspace]"

If it doesn't i'll post a source to that kind of keystroke later.

mana5olia - July 30, 2009, 4:10 am

Snorlax - August 2, 2009, 6:46 pm

This is just a complet rip source compile oh it works ill release this job.

It dosnt send logs [Like Farhans]

You've just edited it with some GUI then claimed it to be HACKFOX LOGGER.

You could at least just say you ripped the whole source and changed nothing.

People like you should be banned in my opinion.
