Thread: [Upcoming][free for testers] SiculusLogger - a brand new keylogger

Siculus - *August 14, 2018, 8:44 am*

UPDATE: This program has been released: https://hackforums.net/showthread.php?tid=5880223

Too Long Didn't Read:I'm working on a new, configurable C#/.NET keylogger

Written from scratch, this its FUD (unpacked, unobfuscated)

Proper Unicode support (eg.: support for non-latin keyboard layouts)

Multithreaded and low resource usage

Window title filter

Looking for people to toy around with it, once I write an auth system (1-2 weeks). These people will get it for free for the lifetime of the project, and they will have to report any issues they find. Post bellow if you want me to consider you for testing

Hey guys.

So, for the past few months, I've been working on a new C#/.NET keylogger. My goal is to build a simple, yet not simplistic keylogger, that gets the job done.
It's written from ground up, and it uses no third party code. As a result, the raw (unpacked, unobfuscated) server / stub / worker is currently fully undetected.

Features:FTP delivery + configuration test

Log backup & upload interval configuration

Log and stub config encryption using a custom key

Window title filter (eg.: only log keys directed to windows whose titles start with 'Note', windows that contain 'Power', etc.)

Single instance (mutex)

Autostart

Installation to custom location + melt

Programmed uninstallation

Built in FTP client for downloading and decrypting the logs

Proper Unicode support (on-the-fly support for multiple input methods; It basically has great support for chinese, arabic, and other non-latin scripts)

Multi-threaded (every single key press is recorded, even when the upload process takes place)

Small stub size (currently ~50KiB, before compression / obfuscation)

Low ram usage and no memory leaks (uses low level keyboard hooks unlike those crapy GetAsyncKeyState keyloggers)

Written from scratch, unlike many key loggers sold on this forum, that are basically reskins of older implementations.

Enough talking, here are some screenshots:

Spoiler (Click to View)

The tool has dependencies on the following .NET Framework versions:4.7.2 - the builder

4.0 - the server / stub / worker

It's pretty much feature frozen at this point, and all of the specified features are fully implemented already, but the tool is still under heavy testing.
Before I'll be able to start selling or offer it for free to beta testers, I'll have to write an autentication system, and that will take me at least a week to architect and implement.

Anyways. I will need some people (up to 10) to help me with testing. These people will get free access to the tool, for at least one month. If you are interested, please post below. I will get back to

you once the auth system is implemented (1-2 weeks).

For anybody else: what do you think would be a fair price to ask for the lifetime version once I start selling? What features do you think are missing (aside from password "recovery", anti-antivirus, anti-virtualization, and other features that would render it illegal) ?

Thanks for reading.

SIM-2866927 - *August 14, 2018, 8:49 am*
Looks cool by now :D good luck with project

LuckyOnes - *August 14, 2018, 6:05 pm*
Looks awesome! Would you be willing to let me test??

Happy Hacking, LuckyOnes

Based on your post history, I'd have to say no. I know this forum is hacking centered, but I don't want my testers / customers to use it maliciously.

Anyways, I'll still need some testers once I fully implement the auth system. These people will have to report back any issues that they encounter while the tool, so the task is really not a big deal.

DeoShaggas - *August 18, 2018, 3:01 am*
Would be super interested in testing this!

Breen1123 - *August 18, 2018, 5:07 am*
Looks nice, good luck with it man. You seem like someone who gets shit done.

jxnxxxzxz - *August 19, 2018, 9:45 am*
It seems a powerful tool, when this complete will be paid or free?

BigTomb - *August 19, 2018, 10:46 am*
i would be very interested in helping test it out :)

Bastrile - *August 21, 2018, 2:20 am*
looks great product, I will be very happy to test and have targets ready to go.
:)

AnonyFly - *August 24, 2018, 6:33 pm*
Still need more testers? I'd be willing to help, hmu

Siculus - *August 25, 2018, 5:35 am*

Yes, I'm still looking for testers. The auth system is pretty much implemented at this point, I just have to integrate it with the application. After that's done, I'll start contacting some of those that have

shown interest (3-4 days from now)

I'm willing to help test, please pm me when aviliable!

big14betvh - *August 25, 2018, 9:34 am*
New to hacking so I would love to test it

arabmoney_0 - *August 25, 2018, 10:41 am*
this will look great, can i get a copy for test and review?

Demoralise - *August 27, 2018, 6:20 am*
I would love to test out this product dude. I'm pretty well known around the forum.

The biggest feature missing is SMTP delivery of logs.

simpleme201 - *August 27, 2018, 9:56 am*
am here to help also just let me know when you need my service

Siculus - *August 28, 2018, 9:59 am*
The authentication system is implemented, but still need some time to configure the web server and to tie all the pieces together. By tomorrow it will most likely be done, and ready for testers.

Still looking for people. Please post here if you'd like to test the program in the next few days. Don't bother posting if your account isn't older than 1 month, or if your post history suggest malicious software use. Thanks

(Aug 19, 2018 09:45 AM)jxnxxxzxz Wrote: [CITE] It seems a powerful tool, when this complete will be paid or free?
Sorry for the delay, but yes, when I'll finally release it, it will be a paid tool.
I'm actually planning on selling it dirt cheap for the first few days (something like $8 for a lifetime license)

VaginatorX - *August 28, 2018, 11:22 am*
I would like to test and debug it. PM me here. Hopefully you do won't abandon the project as it looks it gets much interest ^^

Jambo1907 - *August 29, 2018, 6:37 am*
I would like to help test this. Hopefully this won't be stopped soon

Siculus - *August 30, 2018, 11:57 am*
The program is ready for testers, but only two of the members that posted in the thread were found eligible. I've contacted these users, and I'm waiting to see if they are still interested. Still looking for other people though. I repeat. I need people to test the application, these people will get to keep their license for the lifetime of the project, but they have to report the bugs they identify. You can apply if your account is at least 1 month old, and your post history doesn't suggest malicious use of tools like this one.

SuckMyPP69 - *August 31, 2018, 1:13 pm*
I'd love to help and I'd say that 20-40 bucks would be a good price

Siculus - *August 31, 2018, 1:37 pm*

Too late to the party. The program is now on sale.
