Tested it, but they don't offer house odds - you just bet against other people so the odds are most of the times bad and unpredictable.

Designwise it's not great but I've been using them since 2016 and never had any kind of issue.
I think they're the best crypto sports betting platform overall.

I've added 2 more sites that I've recently started using: 1xbit and fortunejack
Both of them are licensed and they look way better than the majority of sites I've been betting on.

Cloudbet has a really rude support team and verification guidelines that do not make sense.

Also, where is NitrogenSports? I feel they would be a good sportsbook and casino to be added! :)

Never had issues with cloudbet and have been using them for over 3 years.
I honestly hate nitrogen, site looks like trash, not a lot of betting options and it's really confusing for new users.
