{Auto Talker/Spammer - Virtual Insanity}

Sit back & relax, let your computer do the hard work

Too lazy to create your own?

Never been able to find a virus-free bomber?

Welcome to my thread! I know there are a few autotalkers here on HF already and I don't want to go into discussion which one's better, it's all about personal preferences. Here are some features:

Feature Rundown:[?] 4 Different strings to set

[?] Random string generator (also invidually)

[?] Ability to enable a counter (also invidually)

[?] Autostop function (also invidually)

[?] Custom time intervals for each line

[?] Delay function

[?] Always on Top funtion

Notes: [~] Please post all the errors you receive

[~] 2 Different GUI's to choose from

[~] I am not responsible for anything you do with this

[~] Designed in Visual Basic 2008

[~] Tell me what you think. It took me a few hours to create this and it only takes a second for you to share your opinion

Virus scans:

NVT was down again, had to use VirusTotal and I don't know how to copy it correctly so I just

copied the rate result. Feel free to scan the files again on VirusTotal, I don't care.

Hey sorry again for the late response, firewalled. Sure, let's hope these links work. Feel free to scan them yourself if you don't trust me. I don't know why but if you scan them on NVT is shows up as infected. Zoner detects something but hell I don't know why, you can have the source if you want to see for yourself.

What exactly does it do?

Edit: It types into the selected textbox. You cannot use pc while it is running.

Thanks for the scans. No you can't do anything while running as it sends the keys to the active window. Haven't thought about adding that feature, sorry.

NeonGreon - March 20, 2011, 5:12 pm

The file is clean... No viruses
