No vouch copies are available, only the $15 lifetime offer.

You can now purchase onetime build keys for $5!

The lifetime build copies are still available for $15 if you claim one :)

Yes it's still FUD :)

I just made an update as well!

Added 1 Month keys for $15.
Added "Auto-Inject" options that will decide the correct architecture and paths for you based on the arch of the machine and the executable.
Updated the web builder UI.
Fixed a couple bugs :).

Depends on your settings, but the 32-bit stub is ~15kb and the 64-bit stub is ~20kb.

It could be smaller, but I'm using MinGW to compile and it seems to have a bug with calling Code __chkstk_ms() even when Code -ffreestanding is used.. There is a couple workarounds, I could probably get the stub size down to about 4kb if enough people wanted it, but 15kb isn't really all that bad so I haven't bothered :).

Thanks man, appreciate you!!

Soon I will add lifetime platinum key allows access to a USG panel so you can make FUD builds forever by tweaking settings :).

The platinum key will also allow you to host your files directly on my server, so you don't have to worry about maintaining a host for your file(s) you wish to download.

I want a lifetime key for $15.00 if your still selling them sent you a pm thanks :)

avalanchekalu - *November 24, 2018, 4:09 am*
plis shot me a pm so we can talk

Lextian - *November 24, 2018, 4:46 am*
My question is can you add a fake error message to the stub? am very much interested plus can you provide runtime/scan time for both 32/64?

PS the scan time link on your thread shows as Invalid Request.
