note: the rar has a password, so you can't extract it without the password but if you are a good cracker then you could probably crack it.

hint for the password: i am not a face but my name is face.
i am not a book but my family name is a book.who am i?

Going to figure out how to work this now >.<

all you have to do is fill out the username and password (using gmail account)

then you set the time interval(time interval is how long it send logs to your gmail) that you want then you can optionally add the fake error message and the site blocker. after that click the build button and your keylogger is done.

jonatz12 - March 13, 2011, 8:32 am

Libertas - March 13, 2011, 8:35 am

mac@hack - March 13, 2011, 8:39 am

Cometical - March 13, 2011, 8:41 am

smtp.gmail.com & 465 - What is that?

And when I try to run mine it comes up with:

"Runtime error "52":

Bad file name or number"

hackerbug - March 13, 2011, 8:49 am

don't change anything with the smtp.gmail.com and the 465 number if you don't know whats that for. just leave it as it is.

before you build your keylogger make sure to press the Test button above the build button to make sure that you have inputed the correct username and password of your gmail account.
