Markanthony3210 - August 2, 2009, 8:14 pm

Thanks bro, I'll test this out and give you a feedback.

LoveToHax - August 2, 2009, 8:16 pm

This looks promising :D

And BTW...

People... Why don't you use UpplT

No wait and no download speed limit.

IceOnFire - August 2, 2009, 9:27 pm

You should take the download link off, then just send to people who request that have at least 100+ posts so it keeps it from become FUD...

BTW, nice job on the keylogger.

iDGAF - August 2, 2009, 9:30 pm

Nice one man!

\\\\\\\\

x8rUn0x - August 2, 2009, 9:33 pm

Xch4ng3 - August 2, 2009, 9:38 pm

What do we put in the Revived Logs field? BTW nice "Check Account" feature. I like it =D
EDIT: NVM figured it out.

Markanthony3210 - August 2, 2009, 9:55 pm

When I click build, where does it save the .exe file?

gurusharan1247 - August 2, 2009, 10:03 pm

the link is not working

Mr. Ocean - August 2, 2009, 10:39 pm

This seems nice, and yes you should make it 100+ posts to keep it FUD. I have no problem with the 100+ posts, because ive already dled... im very selfish lol

SIM-73089 - August 2, 2009, 11:16 pm

thanks it works fine

PrecisionLex - August 2, 2009, 11:29 pm

Please, PM me !

harsh - August 3, 2009, 1:41 am

well cool

can i have a copy???

sandymartinez1234 - August 3, 2009, 2:24 am

Test e-mail works fine, but after that no logs.

The weird part is, I know it is sending because if I put in a bad e-mail address under "received logs" it spams my sending address with failed delivery messages.

Markanthony3210 - August 3, 2009, 2:43 am

OMG For some reason i can Not find the .exe file any where.....

And i searched my whole computer and still nothing. Someone help PLEASE.

Keylogger is save in hidden folder in program files\Microsoft.. you need to enable show hidden files for you to see the keylogger..???

Try to build server again by putting in the "received logs" the gmail youve been using and try it first to your PC! ???

I have PM'd you Washburn. I'm excited for a chance of trying your keylogger. Read allposts in your
topic, and thanks for your nice job even i haven't tried yet:)
I've talked about keylogging software creation with an amazing programmer at work today. He said

he can do one for me in 2 days. And if not public, it will stay full FUD in VB.NET. the main point is here i think. When the release go on public and links are posted at every hack forums, then we have to look for another FUD keylogger. That's a loop between the relation of coders and newbies, lamers:(

registrationizer - September 2, 2009, 10:11 pm

Sorry for noob question, please don't flame :(

Im confused about the email stuff. Does this only track email logs?

If this tracks everything then does it show on the screen when it sends the log or does it secretly do it?
