Thread: [Batch Help](#)

anonym0.ous - March 21, 2011, 5:04 pm

Hello people of the world, I'm trying to contribute to the forum as much as I can so I've decided to start this thread with help people in batch. Now I've worked with batch for about six or seven years now and would like to help anyone who needs it here. Here's what you do:

- 1) Post a reply of the problem you need help with.
- 2) I will reply with a solution of my own and/or a link that may help.
- 3) If you find this helpful then please bookmark (Ctrl+D for Linux and Windows and Cmd+D for mac users) and rate how many stars you believe this thread deserves.
- 4) If you wish for your problem to be resolved privately then simply post on this thread saying so, please DO NOT pm me I will pm YOU, I do not wish to have my inbox filled anytime soon.

Thanks, ~anonym0.ous~

Raf Simons - March 21, 2011, 5:10 pm

Why have you worked with Batch for 6-7 years? Batch is an extremely basic language and in a couple months you can learn just about everything about Batch.

anonym0.ous - March 21, 2011, 5:13 pm

My grandpa gave me exp with batch and told me it's useless, so w.e I try to do with c++ or c# or any other language I use I try to do with batch to prove him wrong =P

Vendicative21 - March 22, 2011, 1:34 am

That's a good service for people and n00bs ^^

anonym0.ous - March 22, 2011, 4:39 am

Yes, that is what I am going for =)

Zyx - March 22, 2011, 4:53 am

Well then. I want YOU (OP of this worthless thread) to prove me wrong and make a keylogger in Batch!

Good luck with that. Because it's possible in both C++ and C#, and even in VB.Net.

Kthxbai.

anonym0.ous - March 22, 2011, 4:56 am

Kthxbai.

Hmmm, this is some challenge...am I able to use vbs?

Zyx - March 22, 2011, 4:59 am

Lol no. You said you did everything in Batch. Only Batch.

You've read Batch for 6 years or whatever, so you should be pro at it. Now show me that keylogger code, or simply tell me that Batch fails :)

anonym0.ous - March 22, 2011, 8:31 am

(Mar 22, 2011 04:59 AM)Zyx Wrote: [\[CITE\]](#) Lol no. You said you did everything in Batch. Only Batch.

You've read Batch for 6 years or whatever, so you should be pro at it. Now show me that keylogger code, or simply tell me that Batch fails :) Hmmm, if I am aloud to use any batch syntax of my choice then this may be possible. It is extremely easy to make a phishing keylogger, but I assume that is not what you are talking about. If I fail this challenge then I will admit that batch fails and give you credit =)

Zyx - March 22, 2011, 8:44 am

A simple keylogger that is invisible and sends every keystroke to a textfile. It's possible in C++, prove me that it would be possible in Batch :)

Im looking forward to see you fail this task.

Bionical - March 22, 2011, 10:31 am

ok first of all, i think its a good thread with a good service..BUT its useless if this thread is NOT stickied. after a couple of weeks this thread will just disappear unless someone is keeping this alive....so you (OP) should get that stickied on first site..just mentioning?

--

Now to my problem:

(WIN vista & 7)

For example, a batch file wants to make some registry changes or something else which needs ADMIN RIGHTS!

so normally if a user opens the batch by double-clicking -> access denied

How can you skip that WITHOUT THE USER IS DOING OR CLICKING SOMETHING?

Deactivating UAC ? Make the batch start with admin rights? THE GOAL: just to have more access so you are able e.g. to make reg changes.

--

EDIT 1: (i already have an idea how one can do that and you could help me. But first i want to know if u have an idea how you can do this)

EDIT 2: forget the keylogger project....mine has more priority ;-). I do really need help^^

Could you perhaps elaborate a little? I did not quite get it... OP might have problems getting this too..

Or well, i kind of get it.. Why not just make yourself admin?

Bionical - March 22, 2011, 1:15 pm

Quote:Or well, i kind of get it.. Why not just make yourself admin?

well actually in WIN vista and 7 you are already an admin. The only problem is when I want to start a batch file with admin rights:

1. normally you have to right-click on file and choose "start with admin..."
2. UAC prompt comes up (window) asking me "yes or "no"

however, I can solve those two problems with only ONE registry change BUT there is also only again one window(by regedit) asking me "yes or "no".

Only one click on "yes" and my batch would have admin rights forever..but I want to make it without clicking^^ (which user/victim would click yes for fun?)

@ OP

so im waiting for your ideas/thoughts

@ Zyx

or did u mean something like "net user administrator.."or whatever to make yourself admin on the other PC ?

Blackice - March 22, 2011, 3:25 pm

As admin rights are needed for making the registry change, if you/slave are running a batch as admin, make the reg change via the batch.

You need to do something like deceive the user to give admin rights to a routine task, but with a batch file hooked onto it.

Stuff like this should be kept private until you have used it.

jinkop - March 22, 2011, 3:45 pm

Oh man. I'm looking forward to see the results of this tournament. We all know Batch is going to fail

badly. To make a hidden Batch keylogger that runs in the background is impossible. 6 years my @s\$. When do we get the results? 2 weeks, 4 weeks?

anonym0.ous - March 22, 2011, 3:49 pm

Well, I been thinking for a few hours and can't seem to come up with a method using JUST batch, few methods using batch and vbs...so i guess you win Zyx, batch and I both fail. Congratz =)

Zyx - March 22, 2011, 4:25 pm

Thank you. Now just admit that those "6" years as you say you put down on Batch, that they were useless.

Then go learn a real language :)

(Mar 22, 2011 03:45 PM)jinkop Wrote: [\[CITE\]](#) Oh man. I'm looking forward to see the results of this tournament. We all know Batch is going to fail badly. To make a hidden Batch keylogger that runs in the background is impossible. 6 years my @s\$. When do we get the results? 2 weeks, 4 weeks?

We'll never see any real results. We'll never see a batch keylogger.

OP admitted that he failed :)

anonym0.ous - March 22, 2011, 4:35 pm

Whoa now, I know HTML, Javascript, php, c#, VB08/2010 and some c++. Don't make it sound like batch is ALL I know because its not. But, maybe someone else will use your words of advise. ALSO if you find this thread "worthless" then please surf elsewhere and stop wasting yours and my time. Thanks anyways =)

Voidz - March 22, 2011, 4:38 pm

Damn, 6-7 year's is a long time. Batch is also pretty much a useless language, but good job. I'm sure some companies use Batch, so if your a programmer, that's good.

Zyx - March 22, 2011, 4:38 pm

I've known batch for like 3 years, but i just read it for about a month, then i went over to something else. I think it was Perl..

Anyways, sorry for misunderstanding that.

anonym0.ous - March 22, 2011, 4:42 pm

It is quite ok. To me batch is just one of those skills that you carry with you where you can just sit down and think "hmmm...wander if this can be done in batch" and I have found batch to be fairly useful as far as 'ease of access' goes.

Zyx - March 22, 2011, 4:48 pm

Offtopic but... Did you perhaps take that sig from an other member?

anonym0.ous - March 22, 2011, 4:52 pm

(Mar 22, 2011 04:48 PM)Zyx Wrote: [\[CITE\]](#) Offtopic but... Did you perhaps take that sig from an other member?

I was authorized by Ace of Sp?des to use this sig for I am apart of the group "WHO".

Bionical - March 23, 2011, 4:08 am

hey anonym0.ous

what about my problem?

cient of idea how to do that?

(if not i have one but im not sure if its working....)

anonym0.ous - March 23, 2011, 5:33 am
