Thread: Base64 decoding

K_I_R_A - *August 28, 2020, 12:13 pm*
Hello guys,

I was solving some cryptography problems and i found that one
R[corrupted]BR3tCNDUzXzYxWDdZXzRSfQ==
I can't decode it, Any help ?

appreciated

This is not a text. Maybe zip or other binary data inside.

gurlhackerclub - *August 28, 2020, 6:55 pm*
I'm gonna give you a hint. This is from a CTF.

Base64 the first part of what you know.
Base64 this.
FLAG{

Now, what do you get?

Thanks bro, i got it.
it's like a simulation of an error occurred during the encoding process.
"FLAG{" after decoding will be "RkxBR3s="
if i compared the result with the full decoded text i noticed that "[corrupted]" text will equal "kx"
so i replaced it to get "RkxBR3tCNDUzXzYxWDdZXzRSfQ=="
and after decoding it, i got the flag.
