Thread: [1 Infection 1 Possible infection](#)

rawreddie - March 27, 2011, 10:43 am

First one I know is a problem...

Google search directories doesn't go where it is supposed to go like normal.

Second possible infection...

My startup takes about 20-30 seconds to boot up, it used to be 5-10 seconds.

As well, programs are loading up a lot slower now.

[DxDiag Download](#)

Not cured, but how I'm reducing it.

Spoiler ([Click to View](#)) Current suppression that is working for me...

Using bing

The second possible infection, I just turned off the windows logo startup for 3 seconds faster...

As well, programs are loading up a lot slower now.

Maybe you have an update available , check that one first.

Google might been update'd.

Just run a few times your virus scan and if you have opent a file that you dont trust run a virus scan from totalvirus!

b570r - March 27, 2011, 1:54 pm

Use an advance task manager and look through the running processes. This might help -->

rawreddie - March 28, 2011, 8:29 am

Just checked all the comments, I "NEVER" update. The current updates to Windows Vista Home Edition slows it down a lot, mostly the reason why it slowed down.

I'll try the advanced task manager.

Run msconfig Startup and desable all that you don't need because alot of programs add they self to startup so it takes alot to startup and defrage your hard Disk

Hope I Help
