Thread: [Hacking Usb HELP\(Stealing passwords with usb\)](#)

Quadrix - March 29, 2011, 1:17 pm

Is there an tutorial to steal password with a usb when u plug into another computer WITH DOWNLOAD LINK NO VIRUS i seen many saying download but with no download link Tutorial link please Thank u

jgwentworth - March 29, 2011, 4:01 pm

iStealer that autruns on a USB insert. You are going to have to search and find a trustworthy iStealer link, however.

romeo54321 - March 29, 2011, 5:34 pm

If find dat then tell me!!

MasterHacker - March 29, 2011, 6:54 pm

I know it romeo,

just click on the link below:

<http://hackguide4u.blogspot.com/2011/03/how-to-steal-passwords-with-usb-in-just.html>

Works perfect.. And it only take 2 min to setup. thanks

chotzo - March 30, 2011, 3:36 am

It works great :=) Thx !

blem - March 30, 2011, 3:37 am

ye it does work but it get picked up on antivirus when you try and run it. well AVG anyway.

MasterHacker - March 30, 2011, 9:16 am

No Problem guys. Just help me by your great encouraging comments and I will try to find a more lot of tutorials.

Kom - March 30, 2011, 9:42 am

If I understand this correctly you want a stealer to run the moment a usb is plugged in correct?

There are a few things like that out there, you can make a USB Switch blade and make it auto run

the stealer of your choice.

Google switch blade usb, or even the search here should give quite a few tutorial on how to do it. There are also quite a few stealers / keyloggers here depending on what you want to auto run.

Would make it easier than having all the files in the last tutorial on your usb and just having 1, also there is a way to make it run silent without it popping up asking to be run.

MasterHacker - *March 30, 2011, 10:00 am*

Hello Kom,

The tutorial is not by me, so I cannot explain much about the method to you, but if you see the method it is completely detect-proof. You can contact the author of the blog <http://hackguide4u.blogspot.com> (Where the tutorial is posted) for more info.

Thanks,
MasterHacker

Kom - *March 30, 2011, 10:06 am*

Actually some of the stealers you are using in this method are detected by antiviruses I beleive.

Also it asks you to run something, there are way to do it were nothing is prompted and it auto runs. On top of that, I'm sure people would find it quite fishy to see all these password stealers on your usb if they are going to use it (The reason it may be plugged in) along with the text files of all their passwords. Making using one of the stealers here a better option as its only 1 file, you can name your server what you want. Call it. Steals the passwords/infected them as well. And sends updates to your email.
