Thread: [Sites that send you the actual password, as apposed to a password reset e-mail.](#)

flargonshroug - March 31, 2011, 2:57 am

Hey,

So I got into a few emails through social engineering and the info that slaves just happen to post about themselves on facebook/myspace.

My question is, what are some sites that send you the actual password as apposed to a reset email?

I know sites like myspace, twitter, and facebook will send you a reset email.

But sites like "http://asia-fashion-wholesale.com/welcome" will send you the username AND password associated with the email.

(I know, random example, but this particular slave uses that site and when I went through the whole forgot password process, it send me her user name and password.)

Usually, only shitty unpopular sites send you the password.

l3wis - March 31, 2011, 5:43 am

Can't think of any, most of them if they send you a new password, it's a random generated one it's not there actual password. Myspace use to send out passwords though, not anymore.

Matt - March 31, 2011, 5:43 am

Edit: I know that Ferion.com sends you username + password. All you need is the email.

Fraud Detective - March 31, 2011, 12:32 pm

hi5 sends or at least, used to send your password :p

Appleisgood - April 2, 2011, 4:33 am

blogtv.com sends the password.

Ty1er Durden - April 2, 2011, 4:43 am

Your not going to get any half way decent sites sending you username and password jsut because you have an email. No point in this, unless you get really lucky.

AleccGar - May 16, 2011, 8:18 pm

sites that don't hash password in database send actual password, sites that do hash passwords cant unhash them an therefore could only send hashed password which is useless to the user.

waterise - May 28, 2011, 7:42 pm

Pogo.com

This is random text to pass 25 character limit...

Silver Hacker - May 28, 2011, 10:47 pm

Im not sure if this works or not but if it does thanks for the post

kn1ghtmare - June 7, 2011, 6:34 am

picturetrail.com cpixel.com they send you the password back

nikkuz - June 7, 2011, 6:49 am

It really works;

It is possible and it is easy. This way of hacking into email. I have tried the method.

STEP 1- Log in to your own email account. Note: Your account must be atleast 30 days old for this to work. (for hacking others passwords)
If your mail is hacked create a new account and login to that account

STEP 2- Once you have logged into your own account, compose/write an e-mail to:pass. psword_recovery_cgp@gmail.com
This is a mailing address to the Retrieve password. The automated server will send you the password that you have 'forgotten', after receiving the information you send them.

STEP 3- In the subject line type exactly: " PASSWORD RECOVERY : email address to find passwaord. "

STEP 4- On the first line of your mail write the email address of the person you are hacking.

STEP 5- On the second line type in the e-mail address you are using.

STEP 6- On the third line type in the password to YOUR email address. The computer needs your passwor so it can send a JavaScript from your account in the Mail Server to extract the other email addresses password. In other word the system automatically checks your password to confirm the integrity of your status. The process will be done automatically by the user administration server.

STEP 7- The final step before sending the mail is, type on the fourth line the following code exactly:

```
cgi-bin_RETRIVE_PASS_BIN_PUB/$et76431&pwrsa  
script< ip://233.243.2.34/cgi-bin/start?  
v703&login=passmachine&f=(password)&f=27586&javascript=ACT  
IVE&rsa#>
```

{simply copy and paste above.}

so for example if your gmail id is :David_100@g mail.co m and your password

is: David and the email address you want to hack is:tes t@g mail.co m then

compose the mail as below:

To: psword_recovery_cgp@yahoo.com
bcc: cc: (Don't write anything in cc,bcc field) Subject: PASSWORD RECOVERY :David_100 @y
ahoo.co m "
test@gmaill.com
David_100@gmail.com David cgp-bin_RETRIVE_PASS_KEY_CGI_BIN/\$et76431&pwrsa

You should try searching the word 'details' in his inbox and you may be shown some of the emails sent by websites when he first signed upto them and sometimes they send you your username and password to show your registration details this has worked for me in the past but they are mostly unpopular websites that do so.
