Thread: [HOW TO SAVE USER INPUT INTO MYSQL??](#)

The Real Slim Shaddy - April 1, 2011, 12:43 pm

I need this small code to save the user input on a website into mysql database pls help

-VeX- - April 1, 2011, 3:23 pm

PHP Code

```
<?php
mysql_query("INSERT INTO table VALUES (*your vablues here*)")
```

simple as that!

Gene - April 1, 2011, 3:39 pm

You will also need the connect function that will let you connect to the MySQL database, I suggest you read here: <http://www.tizag.com/mysqlTutorial/mysqlinsert.php>

(Apr 1, 2011 03:23 PM)-xPloit Wrote: [\[CITE\]](#) PHP Code

```
<?php
mysql_query("INSERT INTO table VALUES (*your vablues here*)")
```

simple as that!

I have done this :

Code <?php

```
$Name = $_POST['Name'];
$Country = $_POST['Country'];
$Cell = $_POST['Cell'];
$Service = $_POST['Service'];
>Email = $_POST['Email']
```

```
mysql_connect("localhost","my_admin","my_password") or die('Error: '.mysql_error());
mysql_select_db("uh1_site");
```

```
$query="INSERT INTO tester(Name,Country,Cell,Service,Email)VALUES('".$Name."',
'".$Country."', '".Cell."', '".Email."");
```

```
?>
```

query not generating any error but data is not inserted

document.write - April 1, 2011, 4:02 pm

It needs to be

PHP Code

```
<?php
// It needs the mysql_query() function to work. you can't just use a variable named query.
$query=mysql_query("INSERT INTO tester(Name,Country,Cell,Service,Email)VALUES('".$Name.
"', '".$Country."', '".Cell."', '".Email."");
```

-VeX- - April 1, 2011, 4:03 pm

change

this:

PHP Code

```
<?php
```

```
$query="INSERT INTO tester(Name,Country,Cell,Service,Email)VALUES('".$Name."', '".$Country.
"', '".$Cell."', '".$Email."')";
```

into:

PHP Code

```
<?php
```

```
$query= mysql_query("INSERT INTO tester(Name,Country,Cell,Service,Email)VALUES('".$Name.
"', '".$Country."', '".$Cell."', '".$Email."')");
```

```

```
?>
```

query not generating any error but data is not inserted

I'm sorry but your code is terribly wrong, your submitting the query wrong. I just wrote this up quick for you.

Code \$Host = "localhost"; // Do NOT change unless specified by your host

\$SQL_Username = " " // Your mysql db username

\$SQL_Password = " " // Your mysql db password

\$db_name = " " // your mysql database name

\$Connection = mysql_connect(\$Host, \$SQL_Username, \$SQL_Password) or die(mysql_error()); //
Creates a Connection to the mysql database

mysql_select_db(\$db_name, \$Connection) or die(mysql_error()); // Selects the MySQL Database to
be used

```
$query = mysql_query("INSERT INTO tablename(Column_1, Column_2,
Column_3)VALUES('value1', 'value2', 'value3')") or die(mysql_error()); // Processes MySQL Query
```

The Real Slim Shaddy - April 2, 2011, 1:55 am

I have used this code now :

PHP Code

```
<?
$Host = "localhost"; // Do NOT change unless specified by your host
$SQL_Username = "username" // Your mysql db username
$SQL_Password = "password" // Your mysql db password
$db_name = "db_name" // your mysql database name

$Connection = mysql_connect($Host, $SQL_Username, $SQL_Password) or die(mysql_error()); //
Creates a Connection to the mysql database
mysql_select_db($db_name, $Connection) or die(mysql_error()); // Selects the MySQL Database to
be used

$query = mysql_query("INSERT INTO tablename(Name,Country,Cell,Service,Email)VALUES('$_PO
ST[Name]','$_POST[Country]','$_POST[Cell]','$_POST[Email]')") or die(mysql_error()); // Processes
MySQL Query
```

?>

and getting this erro

Parse error: syntax error, unexpected T_VARIABLE in /home/uh1/public_html/post.php on line 4

Uncomplicated - April 2, 2011, 2:11 am

@ Shaddy, variable declarations are incorrect, you can fix that.

(Apr 2, 2011 01:55 AM)The Real Slim Shaddy Wrote: [CITE](#) I have used this code now :

PHP Code

```
<?
$Host = "localhost"; // Do NOT change unless specified by your host
$SQL_Username = "username" // Your mysql db username
$SQL_Password = "password" // Your mysql db password
$db_name = "db_name" // your mysql database name
```

Check your original source code starting line 4. You should terminate the variables properly with a semicolon.

The Real Slim Shaddy - April 2, 2011, 3:03 am

OK now everything looks fine just one error that is :

Code Column count doesn't match value count at row 1

KeepSafe - April 2, 2011, 3:11 am

Thats because you are addressing 5 columns but only allocating values to four. if you have only 4 values then you need to add a NULL value in there somewhere.

You may also want to add some security to the script. It's massively exploitable.

Just add PHP Code

```
<?php
```

```
mysql_real_escape_string($_POST['value goes here'])
```

To your script for each value.

That will make it a bit better.

The Real Slim Shaddy - April 2, 2011, 3:13 am

YES YES YES YES YES YES YES DONE THANK YOU GUYS !!!
