commandoferrando - August 9, 2009, 12:35 pm

ok how do i do this

lets say the webpage is <http://forums.undergroundhiphop.com/login.asp?URL=index.asp>

beginning at the top:

target- what is this and what do i do with it?

type- i guess http form works the best

port- 80 what is this?

connections 0-60

timeout 0-60 what are these?

use proxy? :should I?

http form options

method: GET (whats this?) keep alive (whats this) fake cookies (whats this)

field updates clicked off...should that be on?

encode is on

to the modify sequence box:

target from: what is this?

fieldslot (username) what should this be? feild name is blank as is field value

referer: whats this

fake cookies:

cookie slot: which cookie?

cookie name?

cookie value?

HTML response:

primary response: ncorrect

secondary response: nvalid

learn from settings? whats that do?

back to the bottom window of brutus:

authentications options

use username is checked

single user is not

dont know what the browse button does

pass mode: word list

pass file: words.txt

positive identification results

target/type/username/password

what do these do and how to use them!? It always gets stuck on unable to resolve hostname:
www.forums.blahblahblah ok I got it to run but I want to crack the name dissindex and its PW

all I get is the admin and a password that does not work no it stopped working all together
