Thread: New Bitrat (Bitrat is a thief) discussion

Rechnermai - *March 9, 2026, 9:53 am*

I'm asking the people who are using the new version of Bitrat (Bitrat_is_a_thief)
What's your review?
Do you face any suspisious activities on your pc?

As the rat almost complete in features, but suspisious and I see many members say that they are hacked, Is it worth if you use it in Vmware or empty pc?

I am not aware of that rat but if it's free, then don't expect a hawk to give you chicks

On your experience, What RAT can give chicks now?

possessed-client - *March 9, 2026, 11:23 am*

Yeh, where can I buy a RAT with a chick magnet? If I pay, can someone add a chick magnet to Pulsar or smth?

Honestly never used any public one before and i don't want to miss-lead you but just be aware and never run this kind of software's on your own machine rdp is useful in this case

Shapeless - *March 9, 2026, 11:49 am*

I build super stealth advanced memory execution rats with years of resilience for private use. However i will display you the software types i build and a code signature is a necessity to enjoy my private codes without anyone interupting. Please contact me

Prices are high fyi

casperr - *March 9, 2026, 1:11 pm*

Just use VPS for things like this .

Transporter007 - *March 9, 2026, 3:34 pm*
