Thread: [\[vb2008\] Make a spam bot only spam a particular window?](#)

The-Black-Raven - August 9, 2009, 3:17 pm

i made a spam bot thats somewhat based off of this

<https://hackforums.net/showthread.php?tid=77895>

but the problem is that if i click another window it spams that window. is there a way to make it only spam a certain named window?

also: is it possible to read the box of a chat room and when someone says "hello" it posts "Hello there" or will that require some decodeing of the chat program

BETAhkr - August 9, 2009, 4:26 pm

yah, use C++ so you compile .dll's

I don't believe you can make it run in the backround with vb .net unless you know API.

AnubisX - August 9, 2009, 4:48 pm

Use get active window and make it spam if active window = txtbox (textbox = the window you want to spam)

(If i help, +rep. I notice that i am getting no rep for helping but some people have rep and do nothing...???)

sorry id +rep if i could,

but what do you mean get active window? i cant figure it out?

like ok, say i only wanted to spam the window named Karma

what command would i use to access the text box in karma?

heres a picture of the window.

Vaqxine - August 9, 2009, 5:46 pm

You could specify the window name to use, e.g.
AppActivate("Notepad")

The-Black-Raven - August 9, 2009, 6:00 pm

thanks they works great :D

is there a way i can keep it spamming that window is i open another window?

BETAhkr - August 9, 2009, 10:17 pm

You won't be able to do it in the background of your computer.

But you could make a simple chat spammer
that would put the text in 1 window and send it
using a simple sendkeys.send method.

Check this out 2 do it.

thats how mine works, what i ment by background is that i can do other things while it spams

BETAhkr - August 12, 2009, 11:56 am

Once you open a new window such as a chat box or a web site it will enter the text into anything you click on that can receive text.

Deathader - August 12, 2009, 3:17 pm

Stop being a smith and learn hwid and senddata.

:)

And vb.net can compile .dll's.

You're a joke, Obviously I don't code "Spam bots" there gay and what is spamming going to do? Nothing... So get off me...

And I wouldn't compile dll's in vb.

I would just use C++

Yes he is correct.

but I recommend being more specific when your using AppActivate

le

AppActivate("Proxy List.txt - Notepad")

just in case the user has more then 1 notepad open ?

It may be even wiser to use SetForegroundWindow, because there defiantly can be windows with the same title. In case you are having trouble getting the HWID, here is a complete function:

```
Code Sub SendKeysToApplication(ByVal appTitle As String, ByVal keys As String)
```

```
    ' Find the other application.
```

```
    Dim hWnd As Integer = FindWindow(Nothing, appTitle)
```

```
    ' Exit if not found.
```

```
    If hWnd <= 0 Then
```

```
        MessageBox.Show("Application not found", "Error", _
```

```
        MessageBoxButtons.OK, MessageBoxIcon.Error)
```

```
        Exit Sub
```

```
    End If
```

```
    ' Make it the active application.
```

```
    SetForegroundWindow(hWnd)
```

```
    ' Send the keys and wait.
```

```
    SendKeys.SendWait(keys)
```

```
End Sub
```
