Thread: [\[TuT\] Show Hidden Passwords! Simple Java-Script Code!](#)

Un-Named - April 9, 2011, 9:40 am

Friend leave their facebook open or gmail stuck at the login page with the black dots on it?

Delete the url, and put this in it. Code javascript:(function(){var s,F,j,f,i; s = ""; F = document.forms; for(j=0; j<F.length; ++j) { f = F[j]; for (i=0; i<f.length; ++i) { if (f[i].type.toLowerCase() == "password") s += f[i].value + "\n"; } } if (s) alert("Passwords in forms on this page:\n\n" + s); else alert("There are no passwords in forms on this page.");})();and then press enter!

Your password should show up followed by a box followed by or before the password, ignore it, that's not a problem.

I tried this out with google chrome.

Nice post, Skrillex, but this gets posted every week it seems.

I myself have seen this posted four times. =P

And this does have it's limitations, only works on the logon screen I believe, last time I tried it, didn't work on change password page if it was saved, but I'll look to see.

Fulsum - April 9, 2011, 9:43 am

It's working on firefox too ?

Samira - April 9, 2011, 9:43 am

Oh, cool.

password in forms in this page:

=D
