No, it won't. VB6 and VB.NET are two different things.

You can download my source packs for VB.NET tho.

Braco Asshole - *October 12, 2010, 3:26 pm*
Thank you for this collection. Is this the same with VB.2008?

Milopeach - *October 13, 2010, 1:09 am*
Thankyou for this Flaming worm, I might have a look into the RAT's and Crypter's, Also wouldn't RAT's be easier for Port Forwarding or things like that because of the .NET Framework 2.0/Socket stability it has?

(Oct 12, 2010 03:26 PM)Vengeful Wrote: [CITE] Thank you for this collection. Is this the same with VB.2008?
No, it is not. VB6 is different than VB8.

Port forwarding has nothing to do with the RAT/source code.

You must be HF L33T or Ub3r to REP.

We recommend you take the time to read the HF Help Documents section. The answer to your questions should be contained in there.
