Thread: [\[RELEASE\]\[SRC\] NotepadX v3.6 - Crazily functional RTF editor](#)

Ingenuity - April 9, 2011, 4:29 pm

Okay, so I've been working on this for a long while, and I've got the next version out. Hopefully it should be more stable than all of my previous versions - I've fixed a lot of errors.

It's basically a .NET 3.5 RichText editing program, but with some nice features added.

New features include:

- .doc, docx, html, etc viewer
- Numbered lists (as well as bulleted ones)
- Justification of text (previously not supported)
- Word wrapping
- Increased functionality of word count, etc...
- Program now prompts to save, etc when closing
- Added lots of key shortcuts (ctrl + 1, 2, 3, etc goes to corresponding tabs, ctrl + pgdn switches to next, ctrl + pageup switches to previous, other buttons have been assigned shortcuts)...
- CTRL + Click on links to open them (default browser)
- Using WAY more functional richtext editing control (derived from the RichTextBox, but with support for far more stuff)...
- Improved the find & replace dialog loads (now single dialog but tabbed).

All features:

- Ability to right click a word & get synonyms & definitions offline.
- Ability to right click a word & get larger list of synonyms & better definitions & web results online
- "Change text case" button. Options include "Sentence Case" and "Capitalize first letter of each word".
- Ability to convert the document & save it as an Image
- GoTo specified line
- Tabbed editing
- Spell check as you type
- Support for all fonts, sizes, and formats which you would expect in a richtext file, as well as the ability to preview fonts (like in the MS Word font selection combobox)
- Subscript & superscript
- Indentation & Bulleted lists
- Recent documents
- Find & Replace (regex enabled) & GoTo Line
- Insert over 2000 symbols
- Insert images from file & from clip art (clip art pulls results off Bing using Bing's API (no webbrowsers))
- Word art (pulls results off the web, unfortunately haven't worked out how to do it without webbrowsers)
- Load website source to textbox
- Markup for VB & C#
- Zoom functionality
- Loads of other stuff that I can't think of ATM.

Main fixes:

- Hopefully far less crashes (lots of Try...Catches...)
- When you select a block of text, the formatting is no longer sometimes changed/cleared.
- WordArt now works properly without you having to click "It's not working"...
- When you right click the document, and spell check is turned on, the default contextmenu no longer over-rides the spell check one.
- Program no longer pops up messageboxes when you press cancel on a SaveFileDialog or OpenFileDialog
- Word count is now more accurate
- Program will no longer throw errors when changing character case etc with no text selected
- Recent file list will no longer show duplicate files
- Fuckloads of other stuff I haven't been bothered to type out...

Upcoming features (in v3.7):

- Syntax highlighting as you type
- Line numbering
- Other stuff I haven't yet thought of
- Better stability and less bugs (hopefully).

Screens:

Some cool features:

[img]<http://img84.imageshack.us/img84/305/notepadx3.png>[/img]

Other features as well as offline spellcheck & synonyms:

[img]<http://img153.imageshack.us/img153/6534/notepadx2.png>[/img]

For more sceens & info see this topic (and for even older versions check out the links in that topic):

Virus Scan: <http://virusscan.jotti.org/en/scanresult/bf884e687c9f0b9926d938f3af80eb9b1c236222> -

Rather strange that it's getting 2 detections... I'm pretty sure that it's because I've put it through SmartAssembly. If anyone can suggest any other reason(s) why I might be getting these detections, I'd be most grateful - none of my other NotepadX releases have been detected as viruses, and I'm keen to fix both of these detections ASAP...

Rest assured that it is not a virus - look at my previous posts if you want evidence of that. For those who are paranoid, if you don't trust me, don't download. It's your choice. Just don't troll my thread. Atleast it's a generic detection...

Source: <http://www.mediafire.com/?3ebhi8234074kf3>

Don't make fun of it!!! And if you use it give credit & dont C&P

PLEASE TELL ME WHAT YOU THINK!!!

besimbicer - April 9, 2011, 4:35 pm

where is source link adding my archive

+1 rap

Ingenuity - April 9, 2011, 4:39 pm

Source will be coming with next version (hopefully). The source is really ugly atm, so I'm not sharing it yet.

ident - April 9, 2011, 4:42 pm

Out of curiosity why do you keep putting source in your titles and not providing it?

Ingenuity - April 9, 2011, 4:43 pm

Oh shit. Sorry. I'll update links to include source seeing as I did put it in the title.

ident - April 9, 2011, 4:45 pm

I much prefer the theme to this one. Good job.

Redeemz - April 9, 2011, 4:48 pm

Awesome job man, best out of them all so far GUI rocks and i would like to say thanks for this share you are a pro ?

miles - April 9, 2011, 4:48 pm

Best of the custom Notepads by far.

I applaud you.

Ingenuity - April 9, 2011, 5:29 pm

Well that was a rather pointless post orion...

has anyone found any major bugs?

Endeavour - April 9, 2011, 8:00 pm

Holy poo. Amazing.

This is a top-notch program. I will definitely be taking a look at this. Thank you so much for being awesome <3.

Kotei - April 9, 2011, 9:32 pm

Thanks for this, this will probably take place of notepad for me.

Doctor07 - April 9, 2011, 10:08 pm

This looks very nice buddy :D

Good job ?

?BlueAce™ - April 9, 2011, 11:12 pm

downloading the source.. hopefully i will learn frm it..

thnx for sharing ?

!Cyb33rc0de! - April 9, 2011, 11:14 pm

nice work bro ^^

you can add effects like notepad++ have :)

keep it up

Volgare - April 10, 2011, 1:25 am

Wow this looks awesome amazing coder

Ingenuity - April 10, 2011, 1:28 am

Yeah well when peple take a look at some of the source code, they'll start realizing just how shite some of it is :P

Thanks for all the positive feedback guys. Anyone found any bugs yet?

Kotei - April 10, 2011, 1:30 am

(Apr 10, 2011 01:28 AM)Jack Eagles1 Wrote: [\[CITE\]](#) Yeah well when peple take a look at some of the source code, they'll start realizing just how shite some of it is :P

Thanks for all the positive feedback guys. Anyone found any bugs yet?

I haven't tested this specific version, but in the previous version the text would flicker as you typed.

Ingenuity - April 10, 2011, 1:41 am

Due to the fact that I'm using a way better textbox control in this version (RTBBase.vb), there is no more flickering (while typing). Some flickering may still exist in the SpellCheck, as the red underline has to be drawn to the textbox each time it is updated, I don't see any easy ways around the flickering effect then...

ubbelol - April 10, 2011, 1:46 am

Looks pretty good.. Better than the rest of the notepads on HF and defo better than Window's notepad.

Blink - April 10, 2011, 2:48 am

That's just amazing :D Pro much ...

Ingenuity - April 10, 2011, 5:43 am

I was just wondering if anyone's found any bugs yet...

Mr.Feelgood - April 10, 2011, 5:47 am

Looks epic bro:P great work!

[H]ell - April 10, 2011, 7:07 am

Great release dude :)

To bad I am looking for a code IDE.

Think you can release a better version of np++ ?

Notepad ++ is really great, but doesn't have a sidebar for your projects, like this:

[img]<http://i.min.us/ikGSSk.png>[/img]

That is the only reason I use my mac for coding php, textmate.

-Derp - April 10, 2011, 7:10 am

This is amazing. Good work. I really hope you release the source soon, I've been looking for the code for something like this for ages.

Once again, amazing work.

Cokezilla - April 10, 2011, 8:20 am

Wow this looks top quality bro. Love the theme and features, but one thing you could maybe add would be syntax highlighting and plugin functionality? Better than all those skid notepads that take 10 mins to complete. Nice work.

Ingenuity - April 10, 2011, 8:21 am

The source is there if you have a look.

In answer to [H]ell's question, that's an interesting idea - I might add support for importing projects etc... but I don't think it'll get better than NP++, and also I've no idea (at the moment) how to add collapsible areas of text (for each Sub or Class or whatever)...

Edit: Syntax highlighting is there in this version, but it's shite. I'm in the process of writing waaay better code for syntax highlighting, meaning that you can edit the code without massive lag. I may add plugin support at some time...

Jinxyy - April 10, 2011, 8:21 am

Wow, really nice. I'll learn a lot from this; repp.

TLF-KoBE - April 10, 2011, 10:24 am

This looks pretty good. Nice work.

crush_ - April 11, 2011, 8:16 am

Thank you.

It's hard work.

iBox - April 15, 2011, 11:55 am

Nice Text Editor .

Not a lot of coding involved but nice ideas and gui

Claire Farron - April 15, 2011, 11:59 am

Thankyou for releasing, wanted source :D

MOD3M - April 15, 2011, 1:42 pm

Very Nice, Definitely the best Notepad I have seen on these forums. This will be replacing my Windows 7 Default notepad for sure. Will take a look at the source, and hopefully learn something from it.

Ingenuity - April 15, 2011, 2:12 pm

I'll be releasing a final version in a few weeks. The source for the current version is UGLY AS FUCK

MalwareMop - April 15, 2011, 6:35 pm

Looks like you spent some time. Nice job keep it up.

Zer[o] - April 15, 2011, 8:17 pm

I love all the options you have included it is an awesome project

soft2050 - April 16, 2011, 9:04 am

There's a main bug

And that's the main and I think that you should fix it asap.

Well, if you want this to take the place of notepad++ or notepad

When we open any file by "Open With" by right clicking on any file then it doesn't load the value.

DEN1AL - April 16, 2011, 12:10 pm

Looks great, good job!

//Duttie

Infinitus - April 17, 2011, 8:50 am

Wow, This looks professional :P haha, maybe you could develop it into the next Notepad++

The Unknown - April 21, 2011, 11:34 am

nice software you got there, thanks for sharing it

wyterzzz - April 21, 2011, 3:48 pm

thank you for posting the source code for free :]

avenger19 - April 21, 2011, 4:02 pm

nice nice ... man I tried to make a notepad before and it was pretty decent but nothing like this lol
I also made a text-to-speech notepad ... maybe something to look into adding if you want ... PM me if you wanna know the details.

dang man im looking at it now ... where did you get all the bars and office shit at? That would be great to implement in any program lol pleas tell me?? (:

kingsizednads - April 21, 2011, 5:32 pm

Nice project, you can use this inside of word lol

HF#1 - April 21, 2011, 7:06 pm

My good mate has told me great things about this program, downloading it now.

My good mate has told me great things about this program, downloading it now.

quintz - April 23, 2011, 9:26 pm

H-O-L-Y-S-H-I-T

This is A-M-A-Z-I-N-G

The GUI is great, no bugs; I prefer this > Microsoft Word.

Keep up the good work :)!

PhineasPhreak - May 3, 2011, 10:28 am

I'm going to watch this thread and you for a bit because this looks promising.

But the whole reason people open notepad is for quick and easy notes. Could you guarantee it being lightweight on memory usage?

Nice job pal.

edit: It takes a while to load, strip down some unneeded features perhaps? Or better still have a delay on load, so load up the dictionary slightly later than at boot.

Another suggestion would be, to have the fonts load first as just text then bring up their pictures. Better on people who know what font they want.

Also maybe have the default save as .txt ?

Zoom power is not much, increase the zoom distance between each more maybe?

Sorry I was so critical...

?

Alex™ - May 3, 2011, 3:52 pm

This looks pretty epic, i will be downloading source and messing around with it a bit, thanks for a very nice share!

Ingenuity - May 6, 2011, 3:15 pm

Sorry to this rather old topic, but just to say that I'm still developing, and that I'll be releasing a new version with loads of new features, such as:

Scintilla.NET based text editing control (the same as Notepad++, really amazing control)

As suggested by [H]ELL, I'm going to include some sort of project explorer. Bear in mind that this will be the first version of this feature, so it might not be tip top.

Nicer UI, with far more styling options
More control of the Tabcontrol & how it looks
Hopefully faster loading time

Thanks for all the support & ideas guys, I really appreciate it!

FreshHRS - May 22, 2011, 3:11 am

That looks good man!! Really good, owns windows works one :P

BlackCap - May 22, 2011, 10:50 am

Why do i buyed Microsoft Word, WHY!? ?

Awesome work dude!

Just one thing that's annoy me. When you move a tab, if you move your cursor outside the tab container, the tabpage stops moving untill you move it back in..

?Demon - May 22, 2011, 11:11 am

I see you gave up on both of us doing it Jack, good luck anyway. xD

hackBoTneT - May 31, 2011, 9:49 am

How you people think?? You are just awesome..

Vazity - May 31, 2011, 11:55 am

This is awesome! Keep up the good work mate.

Ingenuity - May 31, 2011, 11:58 am

Just for the record, I would have released a newer version of this, but the problem is that the f*cking spellcheck has stoped working for some retarded reason, and I'm having difficulty fixing it. There should be a new and far more advanced version coming out within about two weeks.

Ingenuity - May 31, 2011, 3:59 pm

No, it gets auto-highlighted.

iLee - June 1, 2011, 6:38 am

For the Select Upper or Lower Case, it shows two information boxes? :S

deli2025 - June 1, 2011, 1:13 pm

I much prefer the theme to this one. Good job.

Ghoster - June 8, 2011, 2:56 pm

Holy shit. Nice coding work dude. I wouldn't be able to even get near this o.O

Cherish Life - June 8, 2011, 5:00 pm

Nice work!

Ganna up this topic for you, deserves the publicity. :)

Ingenuity - June 8, 2011, 5:03 pm

Well it's getting really old now, and it has been pointed out that there are quite a few bugs. If I can ever fix the fucking spellcheck, I'll release a new version.

????? - June 15, 2011, 12:45 pm

Nice to know that you made something like this open source. You deserve shit tons of more rep. Keep up the good work buddy!

Ingenuity - June 15, 2011, 12:56 pm

Well there is a new version available... but the source is only for people who PM & Post on the thread. Just look for version v3.7, it's way better.

AntOneSan - June 25, 2011, 9:26 pm

No coloration of code?

[message]

Phriendly - June 25, 2011, 9:41 pm

Really cool! Bookmarked for later
