Thread: SIM(Secure Instant Messenger) the most secure IM in the world

GoTTsProfeT - *June 6, 2009, 8:44 pm*
SIM(Secure Instant Messenger) is the most secure instant messenger in the world. Mathematical calculations calculate it would take over 26,879,500 years to crack SIM. So chat away, no-one but you and the person your chattting with willever see what you said.

Thanks OP, finally found ODPA's site, they have a binder that makes Albertino basically FUD.

Virustotal calls it clean

What if a super computer is put to the test? Or a few of them??? Does it still take 26.8 million years?

GoTTsProfeT - *June 7, 2009, 11:11 am*
An army of super computer would still take at least 10-20 million years. However not many places have the electricity, resources, or number of super computer to even come close to reaching this goal(and even if they did who wud care 10-20 million years from now?!)
Btw I am the owner of ODPOA and I made all software on it, so be assured, its safe. =]

ep1capple - *June 7, 2009, 11:18 am*
Who uses sim anyway? i mean there are no contacts to hack either through sim.

GoTTsProfeT - *June 7, 2009, 11:41 am*
The point of SIM is to be able securely communicate anonymously, ruling out the ability for anyone except the recipient to ever see what you said. Its great for hackers, programmers, or anyone of the sort, because everything you say is completely secure.

masonticehurst - *September 15, 2012, 10:11 am*
not working website is down right now.

silva555 - *September 15, 2012, 11:22 am*
^^ No shit. What do you expect from a thread 3years ago?
