Thread: [\[C\] UDP Unicorn v2.0 - \(UDP Flooder\)](#)

Sparkyy - April 9, 2011, 5:52 pm

A while back I released UDP Unicorn version 1.0, and all was well.

But there were cries for more, something greater, and they have been answered.

UDP Unicorn 2.0:

[IMG]<http://sourceforge.net/dbimage.php?id=301761.jpg>[/IMG]

Download: <http://udpunicorn.sourceforge.net>

(Full source included)

Features:

Code -Multithreaded UDP flooder

-Port Scanner

-Active Connection Monitor

-Network Information - Public IP Address

-DNS

-ICMP send and receive (Ping)

-Target random ports and use random packet sizes

-User friendly GUI

-Pre-installed list of common protocols to attack

-Ability to play music

-Make your dreams come true

More details on new features:

Code -The active connection monitor uses `GetExtendedTcpTable()` and `GetExtendedUdpTable()` and prints the results to a listview.

-The port scanner is a TCP "connect" scan in which timeouts are set to 2 seconds for each attempt.

-The network information dialog retrieves the local host name, private and public IP address(uses HTTP GET request), and MAC address

-Added ability to minimize to system tray and set window as topmost

-Created a config.ini file parser to save and retrieve common settings each time it is run

-Surprise when the music button is pressed

-A number of other improvements, read readme.txt and the source

Always remember, if you're going to conduct a DoS attack (some refer to as "suicide bombing") you must be host or have a stronger connection than your victim. If not, it is still possible with some skill and patience, hint: short, controlled bursts.

thanks for the share will check the source in a bit

Unreal - April 9, 2011, 6:06 pm

thanks for this share appreciate it :D

((void (*)())NULL)() - April 9, 2011, 9:20 pm

Very nice. I'm very new to HF, so I wouldn't know this, but there's not many Win32 GUI programmers out there. Very nice GUI anyways, it must of been pretty hard to make.

I don't believe that there are. Thanks, you can use ResEdit to create dialog GUIs. I usually do it all by hand though.
