Thread: [Skype Spammer/MSN Spammer/AIM Spammer/EMAIL BOMBER/Facebook spammer/YouTube Spammer](#)

poke1103 - April 10, 2011, 11:17 am

Me and Core are working on a new type of worm, (auto spreader) at the moment all this can do is spam on skype.

Features being implemented:

- MSN Spammer
- AIM Spammer
- EMAIL Bomber
- Facebook Spammer
- YouTube spammer
- Twitter Spammer
- SMS Spammer
- ICQ Spammer

This worm is going to be written in Java and will be using libraries such as JNA/ and JNI. And some more to get functions of the native windows environment.

If you don't trust this don't use it... Use a sandboxie program or virtualbox.

Download:

<http://uppit.com/5oh80xq28aty/skypeSpammer.jar>

Virus scan:

<http://vscan.novirusthanks.org/analysis/e1b2e7287df220962b6ff8fe7a8cd0e0/c2t5cGVzcGFtbWVyLWphcg==/>

Screenshot:

[img]<http://i647.photobucket.com/albums/uu192/poke1103/imageyouaskedfor.jpg>[/img]

NOTE!!!: Never scan hacking tools or worms with virus total, use novirusthanks.org

Robert Nesta Marley - April 10, 2011, 3:03 pm

There is no download link, and you have put a virus scan next to 'download:'

Troll much?

lythinca - July 16, 2011, 11:49 am

I downloaded this and it doesnt run correctly. It opens up, tells me to check a site for updates, and then just crashes when I click OK. (Its not saying like update before use. Its just telling me incase I want to update, check a website)

Can anyone confirm this working?

934891234031412343 - July 16, 2011, 1:41 pm

Do not download this! It's infected!

<https://hackforums.net/reputation.php?uid=226403>

Take care

lythinca - July 16, 2011, 2:47 pm

I just ran a malware bytes full scan after downloading this and running it and theres nothing on my computer from it. Malware bytes was updated with the newest database and version too.

What else should I scan with to make sure?

edit: Is there any safe skype spammers or anything skype related?

934891234031412343 - July 16, 2011, 4:56 pm

<https://hackforums.net/showthread.php?tid=686793> Follow his tutorial and post a thread there. Also check your start -> cmd -> msconfig -> startup -> There will be some .exe's you don't know. Just un-enable them and remove them from your startup.

Take care

poke1103 - July 16, 2011, 6:49 pm

LOL You guys don't know shit, open up the source code and you will see it never sends your information anywhere. If you can't do that you have no right to judge me. Also another way you can check is a program called wireshark which tells you about incoming and outgoing connections, if you notice you will see none of those connections are from my program. I'm reporting you for false reputation.

anonymous - July 17, 2011, 2:20 am

who should i trust? poke1103 with 393 posts and -10 rep or AlpaslanJackMemo with 990 posts and 9 rep???

Speak - July 17, 2011, 4:22 am

Kinda cute that is was actually made in Java.. pretty cool.

poke1103 - July 17, 2011, 12:22 pm

Unless you know how to read Java code you have no right to accuse me of anything.

lythinca - July 17, 2011, 10:14 pm

Hey, theres no foriegn or unwanted .exe's in my startup. This program hasnt given me a virus or malware.

Poke, your program doesnt work though. When I run it, it just tells me that I can go to a website to update (the website is defrunt now, and links to a runescape hacking site and not even the admins there know what the program is), and then crashes when I click "OK".

poke1103 - July 18, 2011, 4:04 pm

site and not even the admins there know what the program is), and then crashes when I click "OK".
Yea I disabled it because people weren't caring. If you give me msn I can make you one personally.
This one has an auto updater and I turned off the updater which is why It's not letting anyone run it.

ramodie72 - July 19, 2011, 3:00 am

thanks everyone for the helpfull information

The Rock - July 19, 2011, 9:07 am

its infected thnx for tht shuda know wit hur rep

halogamerdude1 - July 19, 2011, 2:03 pm

THIS WORKS FINE I DONT KNOW WHAT U GUYS ARE TALKING ABOUT!!! GOD (sorry for caps just annoyed at false accusations)

poke1103 - July 20, 2011, 12:03 am

These people don't even know how to program so yeah, they have no right to bug me :P

miklo15 - July 20, 2011, 7:29 am

Poke1103 failure. It's a fail attempt to put a virus on people's computer's.

Jeff. - July 20, 2011, 10:29 am

This is really one big fail. I saw the picture and was like 'wow okee Java something new' but now no man I sandboxed this and I don't trust anything of this program. There are better solutions for the functions you provide :]

poke1103 - July 21, 2011, 7:22 pm

Lol wow you guys don't even know how to program yet your blaming me for nothing... I didn't even do shit and your blaming me L. Go learn Java and then get back to me k? Go and decompile it and see for yourself there is nothing in it that's bad.

Taylor Swift is Love - July 22, 2011, 12:57 am

Poke, umad.jpg?

But yeah, anyone that downloads this is a complete dumbass.

Take care!

I stopped this program, awhile back lol

tyman231 - August 3, 2011, 7:42 pm

says I need to update. ???

CocaCola™ - September 5, 2011, 11:25 pm

who would want this anyways?, its a skype spammer that doesnt do anything else except spam.
i would be better doing it manually.

HackerKraken - September 6, 2011, 1:03 pm

Thanks man,good program.Downloading now...
