Fatality - April 11, 2011, 6:35 pm

Yahoo and Hotmail Email Account Creators

I have been using these two programs for a long time now. They have helped me create around 50 email accounts in around 5 min. The only thing you have to do is type in the captcha for each new email. The programs generates fake information and inputs it into the account. You can choose your own email usernames and passwords or just make them random.

All of the emails and passwords are stored in txt files located in the folder with the program.

This is very useful for referring yourself on monetizing sites, creating youtube accounts, creating facebook accounts and any other thing that needs emails! Its really helpful! ?

Thank you for expressing interest in these email creators. The link is below and there is no password. Please tell me if you have any problems with it so I can fix it for other people.

Download:

I hope you find a good use to this!!

He didn't code them, they're old software which have been posted before.

Sad to see him actually making you post here to get it, when all you need to do is search.

This software is horrible to be honest.
