

Forum:[Hack Forums](#)

Thread: [\[Project\]Let's make an open HF project - The project](#)

BaussHacker - April 14, 2011, 2:49 am

Vote in the poll for what project you wish it should be.

I will close it later today and start the developement thread and project signup.

Thank you.

?

The language will be C#, it had more votes than VB.

imi-tat0r - April 14, 2011, 3:02 am

I would vote for a Chat or an OS but an OS is too advanced for C# or VB.NET

Ingenuity - April 14, 2011, 3:03 am

Well if it's in C# and C# only, then I guess I'm out of it :(

Pity because I'm actually quite good with webrowsers (if you look at Optiron etc...)

texeon - April 14, 2011, 3:03 am

With the browser, I reckon it should come with inbuilt hacking dictionaries, wikipackia or something, range of tutorials, inbuilt chat. You get my drift, like a library but browses.

Ethereal - April 14, 2011, 3:14 am

IDE is kind of obsolete - SharpDevelop.

I'd be up for writing an awesome HTTP Botnet - I'm learning ASP .NET + SQL relational DB support. But that would either be solo, or with an experienced C++ programmer for the server.

?BlueAce™ - April 14, 2011, 3:18 am

(Apr 14, 2011 03:03 AM)texeon Wrote: [\[CITE\]](#) With the browser, I reckon it should come with inbuilt hacking dictionaries, wikipackia or something, range of tutorials, inbuilt chat. You get my drift, like a library but browses.

thats a good idea.. ?

i voted for compiler..

reGi - April 14, 2011, 4:13 am

I voted for Anti-Keylogger :P Would benefit people alot ;)

Rg1706 - April 14, 2011, 4:15 am

Icant Vote But Im Voting for chat system like msn skype etc...

pr0t0typ3 - April 14, 2011, 4:17 am

(Apr 14, 2011 04:13 AM)reGi Wrote: [\[CITE\]](#) I voted for Anti-Keylogger :P Would benefit people alot ;) Get Keyscrambler ...

What about a real project that needs a lot of work.

We could create a new Programming Language like Python.

The user does write scripts and they are associated with a interpreter which does 'execute' the command and do calculations or webrequests or what ever.

j4x0r - April 14, 2011, 4:22 am

I vote for a filesharing app. One with quick uploads, no downloading wait times, unlimited free downloading and built in virustotal virus scan would be amazing (but optional for uploads so if your trying to upload a keylogger to spread and you want it to stay FUD)

Quiet. - April 14, 2011, 4:25 am

Make either a browser or an operating system. The operating system I'd love to see what a lot of our members combined skills can come up with.

Ingenuity - April 14, 2011, 4:28 am

That's a good point - if an OS was created, we'd need to write apps for it, such as webbrowsers, etc.

nqzdepofltr - April 14, 2011, 4:59 am

The best would be a botnet

Ingenuity - April 14, 2011, 5:00 am

Nooo! If we all make a massive project, then it should be a non-malicious one!! (IMO)

MaxPain - April 14, 2011, 5:10 am

I Vote For Filesharing app and i can also really help as i have make my own ... :P

dynkke - April 14, 2011, 5:29 am

Definitely anti keylogger ? Cant vote in poll until I get 100 posts ?

texeon - April 14, 2011, 5:30 am

(Apr 14, 2011 04:22 AM)j4x0r Wrote: [\[CITE\]](#) I vote for a filesharing app. One with quick uploads, no downloading wait times, unlimited free downloading and built in virustotal virus scan would be amazing (but optional for uploads so if your trying to upload a keylogger to spread and you want it to stay FUD)

Well for the first three reasons, i'd say bitcomet completes that, but the virustotal scanner would be good, so you don't have to set up your AV to support your bitclient and get told it didn't work.

Now if the fileshare client could rip the premium download of like #, or have preloaded Uname/passes that jack in on the hostname being in the url for premium, that would be good.

Emilnerd - April 14, 2011, 5:45 am

filesharing app :), would love it :D

xCocaine - April 14, 2011, 5:50 am

a file sharing app would be really nice, with upload and download system, list and sections etc.

1a2a3a - April 14, 2011, 5:52 am

Hello!

I think the best is the chat...I think you should be make a really god chat system....

Rdogg112 - April 14, 2011, 6:21 am

If we make an OS we could use COSMOS(C# Open Source Managed Operating System),
<http://www.gocosmos.org/>

but then all the apps and GUI would have to be made in C#.

Twist3d - April 14, 2011, 6:25 am

We should definitely make a Hackforums Operating System.

Built in VPN's, IP hiders, Gnacktrack (maybe :P), etc.

Full-fledged hacking operating system ftw? ;)

HSPSoftware - April 14, 2011, 7:15 am

I hate the 100 post limit a little -.'

Anyway, I will be ready then you are finished voting :)

siimon00 - April 14, 2011, 2:29 pm

(Apr 14, 2011 04:22 AM)j4x0r Wrote: [\[CITE\]](#) I vote for a filesharing app. One with quick uploads, no downloading wait times, unlimited free downloading and built in virustotal virus scan would be amazing (but optional for uploads so if your trying to upload a keylogger to spread and you want it to stay FUD)

Guess it's going to be the file sharing project :D

I'm kinda excited ?

how about you other guys? ?

-Siimon ?

Mapex - April 14, 2011, 2:46 pm

Where did my post go?

Anyways as I stated before, a small scripting language with lots of shortcuts such as Perl (regex operator =~ etc).

It would run through a virtual machine on top of .NET.

I guess that is a compiler so that's where my vote is going.

Also, this idea would be combining the Class Library idea because our language would need a set of libraries that gives people a reason to use it other than just a standard .NET language.

Bullet Proof Jr - April 14, 2011, 2:54 pm

OS for the fucking win.

Fuck windows.

Fuck Linux.

and Fuck mac.

Mapex - April 14, 2011, 2:58 pm

(Apr 14, 2011 02:54 PM)Bullet Proof Jr Wrote: [\[CITE\]](#) OS for the fucking win.

Fuck windows.

Fuck Linux.

and Fuck mac.

Except if we made a dandy language I and others would use it, nobody would use our OS.

error32 - April 14, 2011, 3:00 pm

Would this all be open source with logs because although I'm not good enough to help contribute to this project I'd be very interested in learning from the source code.

Mapex - April 14, 2011, 3:02 pm

(Apr 14, 2011 03:00 PM)error32 Wrote: [\[CITE\]](#) Would this all be open source with logs because although I'm not good enough to help contribute to this project I'd be very interested in learning from the source code.

Yeah it would be open source, I'm sure it'd be on Google code, Sourceforge, or something similar.

DarkSeven46 - April 14, 2011, 3:03 pm

A unique compiler multi, like for most languages (.net, c++ delphi etc).

xCharlieBrownx - April 14, 2011, 3:05 pm

I would love to be a part of this. I know a lot about C#. HF Filesharing, botnet, or chat would be great. Something like that for just members of the community is a great idea.

Mapex - April 14, 2011, 3:07 pm

(Apr 14, 2011 03:03 PM)DarkSeven46 Wrote: [\[CITE\]](#) A unique compiler multi, like for most languages (.net, c++ delphi etc).

What do you mean? We can't just write our own .NET, C++ or Delphi compiler.

#1. How could you write your own .NET compiler while using Microsoft's?

#2. We would have to spend hours reading the language's standard.

#3. We'd have to have ultimate assembly knowledge.

#4. Delphi is proprietary, and you'd get your ass sued.

Mermaid - April 14, 2011, 3:07 pm

I'd say the chat, AV, and filesharer should all be made.

siimon00 - April 14, 2011, 3:07 pm

(Apr 14, 2011 03:03 PM)DarkSeven46 Wrote: [\[CITE\]](#) A unique compiler multi, like for most languages (.net, c++ delphi etc).

Look, sorry but all suggestions have been made.

-Siimon ?

Mapex - April 14, 2011, 3:10 pm

The thing is, the chat would require a powerful master server, which would cost money, therefore the project would no longer be open because one person would be buying it.

The filesharing app would also require a master server unless you designed it so people ran their own server and it was a stripped down copy of FTP.

The OS and the Compiler both don't require any money, are definitely brag-worthy and you can show off to Universities and employers, unlike a botnet.

TraptCode - April 14, 2011, 3:22 pm

(Apr 14, 2011 03:07 PM)Mapex Wrote: [\[CITE\]](#) What do you mean? We can't just write our own .NET, C++ or Delphi compiler.

#2. We would have to spend hours reading the language's standard.

#3. We'd have to have ultimate assembly knowledge.

#4. Delphi is proprietary, and you'd get your ass sued.

#1. Codedom

#2. Not necessarily. There are tons of examples per language.

#3. Again, not necessarily. Assembly is simple once you get the basis of it
#4. Licenses, enough said.

Ghazt Warrior - April 14, 2011, 3:22 pm

We should make a HF Web Browser.

siimon00 - April 14, 2011, 3:24 pm

(Apr 14, 2011 03:22 PM)Ghazt Warrior Wrote: [\[CITE\]](#) We should make a HF Web Browser.

Already been done (:

-Sorry d;

-Siimon ?

Mapex - April 14, 2011, 3:25 pm

#3. Again, not necessarily. Assembly is simple once you get the basis of it

#4. Licenses, enough said.

#1. That wouldn't be making your own .NET compiler, that's USING the .NET compiler.

#2. You're telling me there are examples on how to make a C++ compiler from scratch? Show me.

#3. To be able to compile your language into Assembly, you'd need to be really proficient and know EXACTLY how the code would be written in Assembly.

#4. Show me where Embarcadero sells licenses that say you can write your own version of Delphi. Now you can write your own Pascal implementation, but not Delphi, Delphi is a product, not a language.

Adding to #1. Do you honestly think Mono uses CodeDom?

TraptCode - April 14, 2011, 3:25 pm

(Apr 14, 2011 03:10 PM)Mapex Wrote: [\[CITE\]](#) The thing is, the chat would require a powerful master server, which would cost money, therefore the project would no longer be open because one person would be buying it.

The OS and the Compiler both don't require any money, are definitely brag-worthy and you can show off to Universities and employers, unlike a botnet.

Stop trying to be smart. Being open source would mean anyone can compile the server exe and run it on their own server. There is not going to be any master server. Same with the file transfer/sharing system. It will probably just be P2P.

Ingenuity - April 14, 2011, 3:28 pm

(Apr 14, 2011 03:24 PM)siimon00 Wrote: [\[CITE\]](#) Already been done (:

-Sorry d;

-Siimon ?

Sure it's already been done, but the problem is that they've all been crap (comparatively).

Acidious - April 14, 2011, 8:15 pm

If its VB.NET i could help only if it is a chat service.. :\

TheDubWubCub - April 14, 2011, 8:18 pm

CHAT SYSTEM!!! so we all can talk together :D haha

BaussHacker - April 14, 2011, 10:25 pm

I will let the poll run some more time :)

LuckyLoc - April 15, 2011, 1:47 am

I would also like to help on this project since i have knowledge in C# development.
Good idea by the way.

Greetings L.L.

BaussHacker - April 15, 2011, 2:15 am

I will close it now and create a developement thread.
