Hey man

Your Demo Mail Script won't work for me .

It says :- Message failed to be sent to blabla@.com

Bro its just a demo of its view :D

You've to upload it on your SMTP host to make it work.

Waiting for your response :)

Be sure hosting is SMTP supported!

MarkLeevE - July 26, 2011, 12:26 am

does it log the sent messages?

Yes :)

It logs all IPs + Email Ids in an .html file.

I made one of these with a logger :)
Nice job!

There's one logger in my Source as well :P

It logs all Ips,Emails and Time :)

Haha this is the same is my first php project I made years ago. You need to find a host, though, that will not only allow SMTP but also spoofing mail.
