Thread: [\[RELEASE\] Casper's PUBLIC Ddoser 1.0](#)

oMalware - April 15, 2011, 5:42 am

Casper's Ddoser 1.0

OK. I'll start by saying that this was not freaking easy lol
Other than that, Ill give credit to tippyshot for helping me
out with a lot of stuff, as well as a couple other guys in the
Delphi Section.

- +Strong UDP, and SSYN Flood
- +Four Different Frequency Settings
- +Bot Peak count
- +Online Bot count
- +VERY stable Bots

[img]http://img197.imageshack.us/img197/1599/captureqtd.png[/img]

Also, I will say, This is a free release since it is my FIRST
Ddos Client ive ever made. It is posted for you to Judge and
Give feedback; However, I will need to make a BIN for you in order
for your DNS to be tied to your client.

PM me in the Following format for the BIN

AFTER YOU POST ON HERE!

DNS: (your dns)

Port: (Port you want client to listen for)

[Video: <http://www.youtube.com/watch?v=xRBX7N87qQs>]

Also, some FLAWS

The reason this wasnt released earlier,
is because I CANNOT figure out how to
make a download and execute code on Delphi
that could be tied to the bots. I tried a few different ways,
but i am eager to see what you guys think.

well. the reason why there's no GUI, is so that people don't download, and NOT post or ask me for it.... in other words.... LEECH and not say thanks or anything... so what i did. i have to make your bot for you (aka the BIN) ... so if anyone actually needs to use it. instead of just lookin at the program doing nothing. lol. they have to contact me for the bin. theres different frequencies you can hit with. personally from experience, it really depends what
you're trying to hit, SSYN flood on high will destroy any home connection for sure, so will the UDP,
for websites, ive found the SSYN to be the strongest on HIGH, obviously lol

OK. I'll start by saying that this was not freaking easy lol
Other than that, Ill give credit to tippyshot for helping me out with a lot of stuff, as well as a couple other guys in the Delphi Section.

- +Strong UDP, and SSYN Flood
- +Four Different Frequency Settings
- +Bot Peak count
- +Online Bot count
- +VERY stable Bots

[img]http://img197.imageshack.us/img197/1599/captureqtd.png[/img]

Also, I will say, This is a free release since it is my FIRST Ddos Client ive ever made. It is posted for you to Judge and Give feedback; However, I will need to make a BIN for you in order for your DNS to be tied to your client.

PM me in the Following format for the BIN

DNS: (your dns)

Port: (Port you want client to listen for)

[Video: <http://www.youtube.com/watch?v=xRBX7N87qQs>]

Also, some FLAWS

The reason this wasnt released earlier,
is because I CANNOT figure out how to
make a download and execute code on Delphi
that could be tied to the bots. I tried a few different ways,
but i am eager to see what you guys think.

look man, its not that complicated. IF you PMed me
and gave me a DNS and A port, I gave you a BIN, which is
your BOT...

if you read the thread, it told you that

with your BOT or BIN, you have to spread that BY YOURSELF,
and get yourself a botnet, and the bots will show up... and you can ddos,
what exactly do you not get or doesnt work for you?

its a client, its not a shell booter.

This is kinda funny so I the casper client and hit listen and all my DdoserX victims show up. I dont know if thats a feature or not but its cool ?

Krawk - June 26, 2011, 9:18 pm

Nice programbro but how exactly can I get this?

Phriendly - June 26, 2011, 9:52 pm

have 100 posts and know how to portforward

Black Devil - June 28, 2011, 2:17 pm

hope this work :) this looks very awesome been looking for something like this all the time.

dead_ages - June 28, 2011, 4:30 pm

I will try it but how i find my DNS and port in new here =)

cutetiger - June 28, 2011, 5:41 pm

Vouch for Casper. But any one tell me that whats a benefit of DDOSR? please give me some information.

Mr.MOTO - June 28, 2011, 6:48 pm

very nice but some please answer my super noob question...

how do i get someones ip?

and what other things do i have to add to this to attack some one? :P

Cain & Abel, my friend. :) You can download it at oxid.it. To setup its pretty simple, you can just youtube it ?

Raw. - June 28, 2011, 9:52 pm

thanks for sharing bro.

..

matters0928 - June 28, 2011, 9:56 pm

Good ddoser i think you should change the pic of casper to something else

jactherabbit - June 28, 2011, 10:16 pm

BIN would be nice man, ill pm you thx :)

7key - June 28, 2011, 10:20 pm

I posted here, pm'd you and still didn't get the bin :(

unihide4 - June 29, 2011, 2:02 am

Looks like a good program.

Keep up the good work.

Regards, unihide4

kevin_n - June 29, 2011, 3:26 am

Vouch for Casper, he is legit and always been legit.

oMalware - June 29, 2011, 7:13 am

All I can say ... is you guys need to read the thread before you PM me please

wormwonder - June 29, 2011, 7:27 am

I PMed you when can you make the bin file for me?

heretohack - July 9, 2011, 8:32 am

There goes my chances of getting a ddoser :(

Stryker™ - July 9, 2011, 7:02 pm

great program bro :) keep up the good work,i added the program to my thread if thats okay

splitendsz - July 12, 2011, 11:44 pm

it downs a site for a seconds only.. i tried it and follow steps.. i thought it would make the certain site down for an hour and so on...

Phoenix329 - July 12, 2011, 11:55 pm

Nice ddoser , its awesome :D

BrothaMike - July 13, 2011, 12:31 am

is it a false virus bro?

:|

edit: why is there a syshost.exe in it?

that just means you dont have any bots lol. i can hold a site as long as i want lol. u can null route most websites with enough bots.

your problem isnt time related. it just means you need to learn how to spread.

zombiehacker - September 22, 2011, 12:34 pm

Could i get this ddoser please,

thanks alot:)

CRT - September 22, 2011, 3:09 pm

Looks like a pretty good DDoSeR, I recon if you added some more features and what not you could get some bucks for it.

RabbitMonkey - November 9, 2011, 5:51 am

Any chance I can get a copy? Know you said you won't do it for members with < 100 posts, but although I'm new to this forum, I'm not new to programming nor hacking. I've got several pretty much experts in comms, so if I do get stuck I can ask them.

I'll PM you the details anyway, also added your MSN which you posted recently. If you need more info let me know, and if you don't mind letting me take a look, please do so. I'm working on building my own doser, once it's done I'll try release something similar for free, but already spent several hours on it, and getting bored :P

Thanks in advance.

OK. I'll start by saying that this was not freaking easy lol
Other than that, Ill give credit to tippyshot for helping me
out with a lot of stuff, as well as a couple other guys in the
Delphi Section.

- +Strong UDP, and SSYN Flood
- +Four Different Frequency Settings
- +Bot Peak count
- +Online Bot count
- +VERY stable Bots

[img]http://img197.imageshack.us/img197/1599/captureqtd.png[/img]

Also, I will say, This is a free release since it is my FIRST Ddos Client ive ever made. It is posted for you to Judge and Give feedback; However, I will need to make a BIN for you in order for your DNS to be tied to your client.

PM me in the Following format for the BIN

AFTER YOU POST ON HERE!

DNS: (your dns)

Port: (Port you want client to listen for)

[Video: <http://www.youtube.com/watch?v=xRBX7N87qQs>]

Also, some FLAWS

The reason this wasnt released earlier, is because I CANNOT figure out how to make a download and execute code on Delphi that could be tied to the bots. I tried a few different ways, but i am eager to see what you guys think.
