How To Make A Deface Page

First of all, there are about 2 ways (of which I know of) where you can make a Deface Page. The first one is Notepad, where you type your html codes, and save it as HTML. The second way, one which I find very useful is using HTML - Kit, which you can get here : [HTML - Kit Download](#)
Knowing Useful HTML Codes

Well you can't create a deface page without any HTML codes. You could, but it would look VERY boring. Therefore, you need to know some HTML codes/scripts.

If you are a beginner, I recommend starting with the "Hello World" and nothing else, to know your way around. If you don't know how to do this, type in the following under <head> o

PHP Code

```
<?php
```

```
<h1> "Text" </h1> And <h2> "Text" </h2>
```

Keep in mind that we must never forget to close our code by typing </h1> or </h2>. This applies with all the codes you type in, so </html>, </script> and all the others apply.

If you followed what I said and tried out the "Hello World" part, along with saving it as .html, you should of got something like this:

The Preview Spoiler ([Click to View](#))

As you can see, this is VERY basic. I forgot </html> so forgive me.

Now, if you want to make your Deface Page a bit more interesting, you will have to put in various html codes to suit your taste. Although

you probably won't get it a few times, as you learn and discover, it will finally become more easier for you. Here is one example of a really good (in my opinion) deface page, with the script:

PHP Code

```
<?php
```

```
<html><body bgcolor='black'>
```

```

```

```

```
<script>
```

```
function cursor_text_circle(){
```

```
var msg='www.cyberhaxors.com'.split('').reverse().join('');
```

```
var font='Verdana,Arial';
```

```
var size=5; // up to seven

```

var color='#ff';
var speed=.2;
var rotation=-.1;

Usefull thanks mate :) I will try it later :D

HappyMan - April 16, 2011, 12:45 pm

Thanks, the HTML-Kit was great ;)

paulos - April 16, 2011, 1:08 pm

Thanks dude :D
- I will try the kit now :D

nice tut man thanks helped :D

pepon - April 16, 2011, 3:54 pm
Easy to read and understand, finally a good tutorial, thanks.

ohukno - April 16, 2011, 3:56 pm
Gonna try this out since I want to try my hand at defacing sites.

Cyber-Security - April 16, 2011, 5:09 pm
This is really good for starters.

Thanks for the share

Dead Images :(? ?

Pain25 - April 17, 2011, 4:57 am
thanks for this tutorial, but put new images in your tutorial

Basics. - April 17, 2011, 6:22 am
Images fixed. Thanks for the heads up.

I like this and am somewhat already familiar with HTML and PHP. Not quite sure how the music was added and done a little differently on some of my pages but the oval thing is cool :D

GOWxRYAN - September 11, 2011, 11:33 am
this tutorial helped me out so much thanks man
