I've never used Dark DDoSer, but personally I would choose DDoSer.

It might be that you need to botkill before you get botkilled.

Try it and compile the bot.. Also, that version that is cracked also freezes alot.

I loved DDoser, but after a month i got an error saying "failed to contact server". I havnt been able to use it for 2 months and they won't respond to my messages. They have terrible support.

DaRK DDoSeR does not require shells, its a client-based bot not a shell-booter.

The NSA - November 4, 2012, 11:31 am

i prefer dark dosser. i recommend it

.Ant - November 4, 2012, 11:32 am

HostBooter is the best DDoSing client. If i had to chose between Dark DDoSer and DDoSer, I would choose DDoSer since I heard it is runner up to HostBooter. I have heard terrible things about Dark DDoSer so i would not recommend it to anyone.

Sucker for pain - *March 1, 2013, 8:08 pm*
