Thread: [One of the best PC Repair tools \(Contains over 100 tools\) \[FREE\]](#)

Spinningtop5 - April 17, 2011, 11:12 am

Hey, I just wanted to share this piece of software that i use alot to repair infected computers (I'm the tech guy at school, and im a student not an employee) And its great it gets the job done, It can detect Conficker or as i like to call it "Confucker" its a nasty worm that spreads via. USB, and or an internet connection, we cleaned the whole school with this tool (mostly) from a Conficker infection, So again i hope you guys find some use out of it :)

Here's a wiki on Conficker <http://en.wikipedia.org/wiki/Conficker>

Its called stinger its a free scanner from McAfee

LINK: <http://www.mcafee.com/us/downloads/free-tools/stinger.aspx>

EDIT: another tool thats ALOT BETTER Is Hiren's and i LOVE it its like a first aid for your computer, it has built in Dos programs that you can run during boot up, and has almost every pc tool on it.

Here's the link :D <http://www.hiren.info/pages/bootcd>

ima leave the stinger link on here because some one might find it usefull

Thanks for reading

Much agree with you mate.

I remember using this around 5 years ago, and from what I can remember, It wasn't too bad of a tool.
