Thread: [\[WINDOWS\] Wardrive, Crack WiFi Passwords, Spoof MAC address, and capture data.UPDATED](#)

KILLM3 - April 19, 2011, 1:12 pm

Here is everything you will ever need to know from start to finish about Wardriving to find a network, Capturing packets from that network, Cracking the password to the network, anonymously accessing the network with said password, and then ARP/APR poisoning the network to collect cookies, USERNAME:PASSWORD combos, etc...

To begin with, download the pack I have accumulated.

http://filesmelt.com/dl/WiFi_Pack.zip

File size: 34383 bytes

Scan date: 2011-04-19 18:26:37 (UTC)

Begin by installing the WinPcap drivers.

Reboot.

Navigate to the Passmark WirelessMon 3.1 (trees) folder and follow the instructions for the crack.

Now, go ahead and open up Wirelessmon. It's simply a scanning tool :)

Walk, skate, or drive around until you find a network worthy of your time.

When you find the network you want, right click on it and select connect. Then Copy the Mac address of that network into notepad and capitalize all of the letters. Also, Note the Channel that network is on.

Now that we have our target, close out wirelessmon and install CCleaner (ccsetup305.exe).

Open up CCleaner, Click on registry, and Scan for issues. If you have installed Commview for WiFi in the past be sure for "Fix the issues", then scan again to make sure it is gone.

Now this computer is clean of all traces of Commview that I know how to find. We are now going to install Commview For WiFi in a very specific way.

1. Disconnect from the internet. Be it Wifi or Wired, disconnect it.
2. Start the install of Commview for WiFi 6.3 until you choose what kind of license you want. Select "Standard".
3. On the "Additional Settings" Page, un-check "Launch Commview for WiFi once the installation is complete", then continue until finished.

Now go back to the notepad you have that mac address in (Remember should look like "00:1A:2B:3C:4D:5E") and copy it to your clipboard.

Now, the following must be done fairly quickly.

Open Commview For WiFi

Go to "Rules" tab and click on MAC address rules

Check Mac Address rules, and select "Both" and Paste the MAC address of the target network into the box and add it.

Click the Blue "Play" button in the upper left

Select the channel that the network it on and click capture.

Click on the "Logs" tab and check the auto saving box.

I know of no other way to better describe what to do, but if you don't understand PLEASE WATCH THIS VIDEO AS AN EXAMPLE.

.avi 48.2 MB <http://www.multiupload.com/N0W60Z0Z9R>

Now, minimize Commview. If you click on it again it may say your evaluation period is up, so keep it minimized. What you do now is wait while you collect packets. This can take a while so go eat a sandwich...

BREAK

Now that that's done, navigate to My Documents-> Commview for WiFi-> Logs and make sure there is a decent amount of logs in there. If there isn't, go eat more food. Eating is an important part of hacking ;)

After you have enough logs Copy them to a separate folder and close out commview. Then go to CCleaner and go to the Tools Tab. Uninstall Commview for Wifi. Then Scan the Registry for commview entries and remove any that are found. Now, Reinstall Commview the same way as before, but this time once you open it hit "CTRL+L", this opens the log viewer without clicking. File->Load Commview Logs-> Select ALL of your logs. Then File->Save as-> .CAP

We are now done with Commview :)

Now navigate to Aircrack-ng->Bin->Aircrack-ng GUI.exe

Under the Aircrack-ng Tab browse to your .CAP file

Now you can use Aircrack-ng as you would in any other situation. I do not feel like writing out how to use aircrack, so please use the search feature to find the many tutorials written by others. You go read another tut on aircrack, crack the password, then come back here

Now that we have the password what can we do with it other than connect? How do I stay anonymous on their network?

Install Technitium Mac changer - <http://www.technitium.com/tmac/index.html>

Follow the instructions on their site, poof! You now have a spoofed MAC address.

Next step is to connect to their network. If you don't know how to connect to a wireless network, you're an idiot.

Now install Cain (ca_setup.exe) and Wireshark (32-BIT-wireshark-win32-1.4.6.exe or 64-BIT-wireshark-win64-1.4.6.exe)

Start up Wireshark and hit CTRL+I, this will bring up your interfaces menu. The one with packets going up is the one you want to "Start".

[IMG]<http://i.min.us/ikGmci.png>[IMG]

Now Minimize Wireshark and open Cain.

Click "Configure" at the top of the window and under the sniffer tab select the device that has an active IP address. Apply changes.

Go to the sniffer tab and click the "Sniffer" button (top left, microchip with arrow)

Then wait for a router to show up on the list. Then right click it and say "Scan Mac addresses". Scan all possibilities. All other computers on the network will show up. Next go to the APR tab at the bottom and click the blue "Plus".

Select the Router on the left hand side, and the IP of the computer you want to steal from on the right. Then click "OK".

Now activate APR (Radioactive looking symbol in top left).

You are now APR poisoning that IP so that all network is routed through your computer.

Collected Usernames and Passwords will show up in the Passwords tab of Cain.

Want their cookies instead? You're in luck! Since all network traffic is being routed through your computer, Wireshark has been capturing everything! Open up Wireshark and search for "http.cookie". It will bring up all the collected cookies. Simply use an addon for Mozilla (I prefer Add 'n' Edit Cookies) to create a cookie with the information found in Wireshark and then navigate to that site. You will be logged in without the need of a username or password.

This concludes the (brief) walkthrough of how to Wardrive using Windows, Crack WiFi Passwords

using Aircrack-ng and a bypass for Commview for WiFi's evaluation period, Spoof a MAC address for anonymity, and steal cookies and login info to top it all off.

If you are afraid that someone may be able to see your data, use Anonbrowse (Included in the package). For more info about anonbrowse go here ->

<3

Wonderful tutorial.

Thanks man!

Yeah, I haven't been as active because I've been busy with school. But it's spring break and I got bored so I set about finding a loophole in Commview to bypass the evaluation period, and found it :)

FG057 - April 19, 2011, 1:36 pm

yeah broo...its impressiv...keep the good work...:)))

Cerebro - April 19, 2011, 2:35 pm

How many packets should you collect?

KILLM3 - April 19, 2011, 3:11 pm

(Apr 19, 2011 02:35 PM)Nox. Wrote: [\[CITE\]](#) How many packets should you collect?
For WEP 1-5 Million
For WPA only as many as it takes to capture the handshake.

Middle - April 19, 2011, 4:47 pm

Finally i there is somehting to show the 'Hurr durr i wanna hack myneighbours wifi to host my runescape server, backtrack thast like linux fuck dat, is there a windows version?' people...

I haven't read it, but if it does as it says in teh title then excellent work!

Ghost? - April 20, 2011, 5:33 am

Awesome tutorial KILLM3!

Looking forward to more from you!

zer0day - April 20, 2011, 10:35 am

Nice job this will be beneficial to people that want to do it in windows, but then gain this reminds why I use Backtrack.

KILLM3 - April 20, 2011, 10:44 am

Follow the directions in the folder for the crack. It works fine.

jonny1990 - April 21, 2011, 6:33 am

Looks fantastic mate will take a look later!
any chance of getting a video tutorial mate? would be perfect if you could!, BTW in the process of

testing this method, can anyone verify it works?

So far so good, i would like a explanatoin of what's happening here if you could, i mean im keen to learn therefore some feedback would be appreciated. Does this 0 Handshake mean my dictionaries are not finding the pass?

Also if you feel that you can help me over msn gimmie a inbox of your messenger email :)

Look again, there is a video.

0 handshake means you need to capture more packets until you capture a handshake.

Terence McKenna - May 19, 2011, 2:05 am

Bookmarked, I'll check it out later, looks very legit.

frankie777 - May 19, 2011, 3:59 pm

Dude this is the best tutorial ever on wifi hacking. Thanks man, keep the good work flowing!

Inventor1 - May 19, 2011, 7:03 pm

Very nice!

I hope you aren't on my network.....:D

Inventor1

RufioStill - May 22, 2011, 7:38 pm

I'm trying this right now! CommView is collecting packets, have 210,000 so far.. i really hope this works man. As you guys can see i'm a newbie, but i've been reading this tutorial word by word plus other tutoriales.

Panic? - May 22, 2011, 9:06 pm

WOW

thanks awesome tutorial!!

RufioStill - May 22, 2011, 9:26 pm

paniac have you tried this tutorial yet? i am about to aircrack-ng with 1million packets.

I was so close.... i swear but i failed i think i need more packets.. i was so close

can someone tell me how close i was?? i think i need more iVS? lol

You need more IV's. It also helps if there is active people on the network at the time. I usually start capturing packets at 9PM Friday night and have enough by Sunday morning to crack the pass. (People use internet more on weekends.)

PedroDJ - June 13, 2011, 10:05 am

Cool tutorial: thank you!

GHOST TESLA - July 4, 2011, 3:39 pm

Like a noob, I am stuck on this part.

After you select select ALL your logs, how do you Save as .CAP? All I am able to do once I open the Log Viewer is open the logs, before or after I open the logs, theres no way for me to save them as .CAP.

KILLM3 - July 4, 2011, 4:09 pm

There is a video tutorial...

I made it a download only video because if I would've bothered to upload idiotic users would have said they can't see the text and stuff because they're too stupid to hit the HD button.

Kadabraa - July 5, 2011, 12:26 pm

Sick TUT, covers everything you need, and easy to understand

GHOST TESLA - July 5, 2011, 1:36 pm

Do you need backtrack or linux to use aircrack? All the tuts involve this.

shadowic20 - July 5, 2011, 2:01 pm

I just have a real simple question. Why bother reinstalling commview?

Great Tut Btw :D really easy to understand :)

KILLM3 - July 5, 2011, 8:34 pm

(Jul 5, 2011 01:36 PM)Tdotwire8 Wrote: [\[CITE\]](#) Do you need backtrack or linux to use aircrack? All the tuts involve this.

Aircrack-ng come in binaries for Mac, Windows, and Linux.

It's Airmon-ng you're thinking of, cause Windows doesn't support Monitor mode. Commview replaces airmon, so no. You don't need backtrack or linux. Just windows.

(Jul 5, 2011 02:01 PM)shadowic20 Wrote: [\[CITE\]](#) I just have a real simple question. Why bother reinstalling commview?

Great Tut Btw :D really easy to understand :)

The trial runs out after 30 days, if you want to continue using it after that period, follow my instructions.

GHOST TESLA - July 5, 2011, 9:21 pm

It's obvious that you're new at this, and that's okay :) WEP can be cracked using multiple methods and is old and easy to crack. WPA is much harder. A password list must be supplied so that it can bruteforce the handshake.

GHOST TESLA - July 5, 2011, 10:27 pm

You can eliminate that by adding personal passwords to the list using CUPP -

http://www.social-engineer.org/framework/Computer_Based_Social_Engineering_Tools:_Common_User_Passwords_Profiler_%28CUPP%29

GHOST TESLA - July 5, 2011, 10:38 pm

You should be able to as long as the log in information is passed through the access point. Many corporations are learning to put wired computers on one router, and then branch the WAP off of it, so that any attacks would need to be performed from a direct wired connection. But yes, you can do it, but if you're looking to steal login information, id suggest using Ettercap. Cain comes with predefined settings for identifying login information, while ettercap just captures everything.

electric - July 6, 2011, 6:40 pm

Very nice tut bro !!! Good work !!

Hypnotic - July 7, 2011, 1:24 am

Great tut thanks alot man.

Rounder - July 7, 2011, 8:47 am

when i go to aircrak he sad that failed and next try with 20 000 IVs. what should i do ? i had about 2.5 milion packets in logs ..

heres the pic <http://img268.imageshack.us/img268/5374/problemsaair.jpg>

KILLM3 - July 7, 2011, 9:36 am

(Jul 7, 2011 08:47 AM)Rounder Wrote: [\[CITE\]](#) when i go to aircrak he sad that failed and next try with 20 000 IVs. what should i do ? i had about 2.5 milion packets in logs ..

Packets don't really matter. What's the use of capturing a packet if its empty? You need to capture packets while people are active on the network.

Rounder - July 7, 2011, 10:22 am

o now i understand. and now i have another question about :D wifi that i try to hack has wpa2 protec.... i gues that will be hard to hack into this so can i do this from 2 pc and then i can just copy logs into 1 folder?, by the way great tut :D

ps : if I understand you well i need to run com.. when i think that people are online ?

iVision - July 8, 2011, 10:31 am

Great tutorial gonna try it out on my neighbors network. I really hope it works because there signal strength is higher then my own :P

KILLM3 - July 8, 2011, 10:46 am

Yes, in commview while capturing packets, click view->statistics, then click on view MAC matrix or something like that. You can see who's connected :)

Kevko - July 8, 2011, 1:44 pm

I have a problem with the zip archive...

i cant extract its content because WinRar says the archive is broken...

Greetz

Kevko

denooch - July 8, 2011, 4:51 pm

love this guide. i test the cain+wireshark on my own network. and on myself..

my anti-virus/network protection software came up with some packet sniff warning and said blocking all traffic from x.x.x.x

if i try this on target will they have the same alarm go off?

KILLM3 - July 8, 2011, 9:22 pm

As far as I know, there is no way an AV can detect an APR poisoning attack. What it likely was is: Cain is detected as a "hacktool" by antivirus scanners. This does not mean it is infected, this is simply a warning from AV companies that the exe is meant for malicious attacks that can get you in legal trouble if caught. You're firewall caught the attack and disabled it because it was a originating from your computer.

In short, no. Your target will not see that warning. You wouldn't have seen it either if you had followed the directions in the popup when you start Cain, it clearly states that "Cain has detected a firewall. Some features may be disabled".

iVision - July 9, 2011, 1:10 am

How this works?

I tried it yesterday I had 1 - 2 million packets. When I exported it into .cap, the logs where gone and

my .cap is never exported. So I've got nothing..

And I tried it now again but then I got 5packets per second and yesterday 300-500packets per second?

KILLM3 - July 9, 2011, 3:48 am

They should be located in USER/My Documents/Commview/LOGSThats weird because I tried it again on another network and they again disappeared ? or is that because I export in the same map as where the logs are saving?

And do you have answer on my other problem? (packets)

denooch - July 9, 2011, 9:29 am

In short, no. Your target will not see that warning. You wouldn't have seen it either if you had followed the directions in the popup when you start Cain, it clearly states that "Cain has detected a firewall. Some features may be disabled".

[/quote]

thanks for the reply. after a day of capturing and looking for possible L/P all i found out is that this chump only watches wwe matches from the 90's on uTube

R2Spec - July 9, 2011, 9:32 pm

Great Tutorial !!!

When capturing packets with CommView the packets are automaticly saved in the .ncf extension. Its possible to change the extension by clicking the "save as" button. I tried changing the extension in .cap (.cap is available in the list).

In airodump - ng GUI i select the .cap file that was saved earlier by packet capturing with CommView and pressed the Launch button. A cmd box opened, airodump searched the .cap file in the filesystem and gave an error message that the file is not in the right format (Only .pcap or . iv is accepted).

Is it possible to convert the . cap file in a .pcap file ?

Or what am i doing wrong ?

KILLM3 - July 9, 2011, 9:49 pm

Like a noob, I am stuck on this part.

After you select select ALL your logs, how do you Save as .CAP? All I am able to do once I open the Log Viewer is open the logs, before or after I open the logs, theres no way for me to save them as .CAP.

File-> Export-> Wireshark TCP dump

Was located on page 3

Eminent - July 9, 2011, 11:38 pm

OH DAMN! This thread is freaking amazing. I'm bookmarking this ;)

thesilverwolf - July 10, 2011, 4:21 pm

Great tutorial! It all works like a charm, tested it out with two computers and I was able to snag packets and cookies from one and put them in the other. It seems that promiscuous mode doesn't work with all wifi cards, so you may have to turn it off (I had too) but it all still works fine. Add n' Edit cookies doesn't work In FF 4.0+, so I got Cookie Manager (<https://addons.mozilla.org/en-US/firefox/addon/cookie-manager/>). It also helps to put your FF in private browsing mode so that you start with a clean slate for cookies.

Eminent - July 10, 2011, 11:49 pm

There are multiple tutorials on how to make addons compatible with any version, check em out ;)

Jimmie - July 11, 2011, 10:36 am

So you don't "feel like" linking us to a good tutorial. I am stuck on aircrack-ng step. Any help with that?

Esimia - July 11, 2011, 10:59 am

Hey the only issue im having is my Capture button on Commview is grey and unclickable. any help? ive done every step up until pressing the capture button.

any help would be great. im actually just trying to find the admin password for my router.

Thanks Esimia

Rounder - July 11, 2011, 11:43 am

in many sites people are saing that WEP can be broke in 10 minutes and with this metod it is much more then 10 minutes is there any faster bruteforce then aircrack that can work with cap logs?

faiz1120 - July 11, 2011, 1:07 pm

very nice and well put. i would try but addiction stick to backtrack and fern wifi cracker. might give it a swirl

aferadomjr - July 12, 2011, 11:13 am

Stick to Backtrack... But nice post, Windows got a chance.

KILLM3 - July 13, 2011, 12:54 pm

(Jul 11, 2011 10:36 AM)Firephoenix Wrote: [\[CITE\]](#) So you don't "feel like" linking us to a good tutorial. I am stuck on aircrack-ng step. Any help with that?

Download the package.

Aircrack-ng/Aircrack-ng/Bin/Aircrack-ng GUI.exe

You should be able to figure it out from there. It's a GUI.

(Jul 11, 2011 10:59 AM)Esimia Wrote: [\[CITE\]](#) Hey the only issue im having is my Capture button on Commview is grey and unclickable. any help? ive done every step up until pressing the capture button.

Thanks EsimiaGrey and unclickable means you're wireless card doesn't support monitor mode. Sorry, this will not work for you.

(Jul 11, 2011 11:43 AM)Rounder Wrote: [\[CITE\]](#) in many sites people are saing that WEP can be broke in 10 minutes and with this metod it is much more then 10 minutes is there any faster bruteforce then aircrack that can work with cap logs?

It can be broken a lot faster, but it requires linux. This thread is for Windows, look elsewhere for help with backtrack.

(Jul 12, 2011 11:13 AM)aferadomjr Wrote: [\[CITE\]](#) Stick to Backtrack... But nice post, Windows got a chance.

I have already said this: Backtrack is very superior to this method, I use backtrack. But this tutorial is for windows.

HarkerFark - July 15, 2011, 6:07 pm

Thanks alot for this - I will try this out on my own network

habano17 - August 18, 2011, 2:52 pm

Simply search for how to use aircrack to crack wep or wpa (depending on what you're cracking). You only need to brute force wpa. Wep is done by reversing a large number of IVs

javajungle - February 12, 2012, 5:43 pm

@KillM3 The link to download is broken, I used google's cached page and the links that page were broken as well D:

Can you update the download link...

filipivanovic - March 19, 2012, 1:46 pm

Yes, download link don't work for me...

SIM-1179501 - March 19, 2012, 6:45 pm

this looks cool, now I can join the wifi at my school. :)

johnking2009 - March 19, 2012, 7:17 pm

thank you for the great work but can you update a new link because the old one is not working any more

thank you ...

PumaCraft - March 20, 2012, 12:36 am

What's the biggest network you would recommend doing this too? I have recently received an older windows computer(vista) and am kinda new to this stuff, I used this twice today on home networks, and I did fine. So, biggest network estimate, and if it was, for instance, about 2500 people connected could i collect all their cookies onto an external hard-drive? Also, could I be traced back to my computer?

Poserver.exe - March 20, 2012, 4:25 pm

SOLID! tutorial man

the link is not working tho

KILLM3 - March 20, 2012, 5:47 pm

I will be updating the link tomorrow.

That is all.

SpyFi - March 21, 2012, 9:14 pm

Best Windows Hacking Tut I have seen as far as WIFI goes! Keep em coming!

theprofesh - March 21, 2012, 9:33 pm

Multiupload doesn't work anymore....

ThaTwizzla - March 22, 2012, 1:30 am

yeeep, giant sadface.

i havent tried hacking anything since Windows Millennium Edition was AMAZING.

i... i dunno what the fu*k it is, but if tried 3 different flavors of linux? unix? whatever. i hate em.

ubuntu, backtrack 4, then 5-R2 or someshit

guess all the lookin iv done, i just cant find a GOOD tutorial, for someone who has never laid a single keystroke in the OS...

let alone some command prompts.

dont take me for an old fool. i can root the shit outta anything android.

and people tell me in some smart ass way, if you can takedown android, you can own linux.

Anybody feel like helping a DevilDog out?

maybe point me in the right direction?

this wounded veteran housing iv landed myself in, however nice it may be, is cut off electronically almost.

the FASTEST internet available, is a BLAZING 1.5m.... (FML-makes me wanna cut my other foot off)

Either way, SemperFI

and please spare me any smartass remarks.

people come here to LEARN, and people like US, need unity.

oh yeah i forgot to add: MY side of the street, 1.5

other side, FiberOptic..

some BS right there.

SemperFI

KILLM3 - March 22, 2012, 4:40 pm

There is an aircrack folder that contains a GUI, and also contains a readme. Between those two it is very clear how to crack a .cap file.

duffmanohyeahr - March 24, 2012, 10:42 am

allright i will try, thx :3

You can check the "channel" column in Wirelessmon for the target channel

nickolteen - May 11, 2012, 2:15 pm

This is where i first started and gained an interest but no WEP AP's anywhere for me so far but commview showed the deep layers wpa/wpa2. I have since moved on and bought an awus036h adaptor (nice bit of kit at a nice price :) through hours of reading all kinds of stuff from all over the place. I have been compiling all my efforts into some folders with notes which i hope to share at some point (when i organise them lol). Manged to get myself to a point where i can import word lists from my windows hd to my partition that has bt5 R1 running in Oracle VM VirtualBox.

I still have lots to go with retaining all the command lines in my brain (haha, having to write a tutorial for myself in note pad for all this stuff). Currently humping 430 k/s from 1 core until i noticed that i could set the box to use more :S.

Next step will be looking into making a true linux os and cuda usage once i get my head around all this and start to feel at home with it.

I just want to say thanks to the OP and all others here that have shared the wisdom as i would not be at this stage without you fellas/felletes.

Regards from a fellow fella, nick :)

www_webhead - May 11, 2012, 9:16 pm

[img]<http://cdn.memegenerator.net/instances/400x/20607458.jpg>[/img]

I don't go on Russian forums and say "Give me hacks in video because I don't speak Russian Language". They would laugh, say some things in Russian, and ignore me.
Why do you expect anything else here?

If you're truly in need of a video, search for "Commview crack wifi" on youtube.

Felix Stormrider - May 19, 2012, 4:52 pm

Is there any update on the download link? I don't mean to be a bother, just hoping to get this to work.

jamescook95 - May 21, 2012, 12:04 pm

Good job mate. Amazing tut. Looking forward to seeing more from you .

it looks interesting but where is the link?

thx

nickolteen - June 22, 2012, 10:39 am

hi again. just to confirm that the link is wanting a survey to complete b4 unlocking the download which is unfortunate as i had this downloaded b4 but now i had to get new external hd as old external hd kerflopped on me so i lost this stuff.

would be great to get this back. :)

KILLM3 - June 22, 2012, 10:52 am

(Jun 22, 2012 10:39 AM)nickolteen Wrote: ([CITE](#)) hi again. just to confirm that the link is wanting a survey to complete b4 unlocking the download which is unfortunate as i had this downloaded b4 but now i had to get new external hd as old external hd kerflopped on me so i lost this stuff.

would be great to get this back. :)

damnitt...

I keep forgetting to update the link.

Sorry about that haha. Ill update it tonight.

beastmode16 - June 24, 2012, 6:47 pm

seems interesting tut again from you KILLM3 !!! I always wanna give a try from your tut man.. nice job!

amiroslo - June 25, 2012, 1:39 pm

I need a link with no survey!

Anyone got it?

Thanks

winstonvan - June 25, 2012, 1:56 pm

The link is temporarily disabled. Another one? :D

nickolteen - June 30, 2012, 5:18 pm

Hi again. Thank you killm3. Noticed the link is still not changed but i thought i should pull my finger out my backside and find all the files from your list that i could remember.

I hope you don't mind me posting a new download link with the apps i could get.

I also added elcomsoft security auditor with crack (find this way faster than Aircrack-ng GUI.exe), tor, u torrent, and virtual box.

All other apps are as you had given me but might be new revisions and commview comes with a crack too :)

I wont post the link yet as i would rather wait for you to say your ok with me posting it here.

File size is 182MB rar

Once again this has been a good tut for me. had many success with it :)

KILLM3 - July 1, 2012, 5:02 pm

Finally got around to updating the download link. Enjoy.

dick8843 - July 2, 2012, 12:03 pm

thanks this is just awesome for windows !

locknet - July 3, 2012, 2:02 am

Thanks a lot KILLM3<3 I'm gonna give it test

ano-cirdow - July 5, 2012, 4:22 am

This a great program, because all cracked Wifi are in Backtrack !

This being on windows :D

bonkersone - July 5, 2012, 9:02 am

What do you guys say? better then backtrack?

definitively easier to use.

nickolteen - July 5, 2012, 1:27 pm

(Jul 1, 2012 05:02 PM)KILLM3 Wrote: [\[CITE\]](#) Finally got around to updating the download link. Enjoy. Thanks killm3, even though i found most of the software i still take a download as there is still some stuff i could not get.

Thanks again ?

(Jul 5, 2012 09:02 AM)bonkersone Wrote: [\[CITE\]](#) What do you guys say? better then backtrack?

definitively easier to use.

its good to start on and it has its pros and cons, no messing around in backtrack as a gui is nice

and simples but learning backtrack is very worth it.

i like to run backtrack in oracle as i can switch between bt and windows. makes learning easier.

this thread is where i started and i have jumped leaps and bounds from this thread.

?

Apex_Predator - July 6, 2012, 4:59 am

well i have a problem

non of the crack codes doesn't work

you have any other code?:/

ano-cirdow - July 6, 2012, 6:12 am

(Jul 6, 2012 04:59 AM)Apex_Predator Wrote: [\[CITE\]](#) well i have a problem

Can you explain your problem because it's to short what do you say

Lord_Solrac2 - July 6, 2012, 9:17 am

Good Tutorial :3 Does it work for changing IP Adresses in Login-embedded connections?

airjosh97 - July 17, 2012, 2:36 pm

This looks pretty amazing, going to have a go of it tomorrow, cheers!

FuegoTegu - July 18, 2012, 9:31 pm

So I'm at the point where I need to crack the password through Aircrack-ng. I'm completely unfamiliar with this, and could not find a clear tutorial on what I do next. I've tried simply clicking launch, but that didn't work. Any suggestions on getting further in this tutorial? Please and thank you!

pr0ven - July 23, 2012, 6:26 pm

can you help please, im just going to the rules > mac but its not there, there is nothing to do with mac addresses. theres mac and ip aliases but nothing that i can check about rules.

can someone help? pm me if you can as i check that more than i would this thread. i dont want to go to another thread when i have come this far, and this is the best that i have seen so far. so i might as well get help.

up to now this has been a really good, working tutorial that is clear and virus free. thanks

Hunte® - July 24, 2012, 3:27 pm

I have been getting some problems towards the end. WireShark is working its shit so I open Cain. I choose the active IP in the Configuration. Once I got up to the APR part I don't get the blue "Plus." Its gray. It only turns blue on APR-Cert, and APR-DNS. Any ideas?

Thanks for the Tut so far.

dracus_loki - July 25, 2012, 12:18 am

im gonna try it right now hoe it works ,, but just for precaution im asking im gonna try to crack in a very huge commercial wifi network ,, is there anything else i should know of

Hunte® - July 25, 2012, 8:49 am

Use a proxy? I am just really starting but from what I was told, whenever you are hacking use a proxy.

r00txX - July 26, 2012, 2:00 pm

Hello, I would like to check this out..

If I get this, Thanks in advance.

jaxnif - July 28, 2012, 10:58 am

Im getting my logs and shit. But i can't find a good aircrack tutorial for the life of me. Would you happen to know of one off the top of your head. Thanks for this tut btw, very helpful.

L?c???? - July 29, 2012, 10:44 am

Dude you know how helpful this was to me i love you forever :O <3 +1 repp

jaxnif - July 29, 2012, 5:44 pm

Is it weird if i get no logs from an internet access point when capturing packets for a whole day?

Technopope - July 29, 2012, 5:57 pm

Great TUT Dude.. :D

I am sure I will give you +3 after i become an l33t..

?DownUp? - July 29, 2012, 6:33 pm

thanks broo, loved it! A great one, very useful!

ch3micalburn3d - August 9, 2012, 3:02 pm

very nice tutorial mate , thank you for sharing this

UnHlde - August 10, 2012, 6:43 pm

Awesome tutorial.

have been waiting for this.

RandTheRand - August 19, 2012, 10:43 am

Can you please re-up wifi pack? The download link is broken for me

thebulgarian - August 19, 2012, 11:51 pm

(Aug 19, 2012 10:43 AM)RandTheRand Wrote: [\[CITE\]](#) Can you please re-up wifi pack? The download link is broken for me
the link is working for me?

fosgate3 - August 21, 2012, 7:03 am

Well done. Your awesomeness will be passed down in tales and legends.

Kalvaxas - August 28, 2012, 11:36 am

When you're in CommView, there is no "MAC Address" tab under rules??

KILLM3 - August 28, 2012, 12:48 pm

(Aug 28, 2012 11:36 AM)Rosario Wrote: [\[CITE\]](#) When you're in CommView, there is no "MAC Address" tab under rules??

I believe it's on the left side panel under the rules tab.

Egyptian Royalty - August 28, 2012, 8:01 pm

Woof thanks for this mate, now I can steal wifi all day

thankyoufreaksvids - August 28, 2012, 8:39 pm

Thank you very very much. ive been in dire need for this. if you wanna make some \$\$ hit me up.
peace

Kalvaxas - August 29, 2012, 5:49 pm

I found it. Now, I'm stuck on where after you enter the MAC address, you have to hit the blue play button in the top left corner.. It's Grey, and it is unclickable.

[img]http://i.minus.com/iboLWeUeUzoCJ7.PNG[/img]

Any ideas on what to do, or am I doing it wrong, or??

maaz-saeed - September 1, 2012, 6:41 am

my commview is not working.. every time i 'cclean' it and reinstall, it tells me that 'evaluation period has expired' msg ... help me :\n i have tried removing it from Regedit.exe , but still

Kalvaxas - September 1, 2012, 7:28 am

(Sep 1, 2012 06:41 AM)maaz-saeed Wrote: [CITE](#) my commview is not working.. every time i 'cclean' it and reinstall, it tells me that 'evaluation period has expired' msg ... help me :\n i have tried removing it from Regedit.exe , but still

Manually uninstall it from "Uninstall a program", then after it has uninstalled, restart your PC, and go back into where the commview files were located, and delete them. Then, use CClean. If there was no file path, then that's good, but you still have to use CClean.

Also, make sure you are using the registry cleaner part of CCleaner. You might have to clean your registry quite a few times depending on how bad your registry was to begin with.

Nonfatkibbles - September 1, 2012, 11:59 pm

Good stuff
thanks for the info!!

PaulSorry - September 2, 2012, 11:04 am

I believe there is a problem with the download link. Every time I try to click "WiFi_Pack.zip" it just takes me back to the same page. If I try to "save as" the link, I get a damaged archive. If you could help me with this it would be highly appreciated.

Thank you in advance, Paul.

Icefortress - September 2, 2012, 12:47 pm

Thanks for the tutorial can't wait to try it out.
