How to make images look like miniatures!

EXAMPLES:

Spoiler [\(Click to View\)](#)

Lets get started!

STEP ONE:

Find an image that would work well, one's that are usually a higher angle work better because that's how miniatures look. Use the two I chose as a reference.

STEP TWO:

Select "Quick Mask Mode" (The square with the circle in it!)

STEP THREE:

Select the "Reflected" gradient from the menu and make the image look like so:

Then exit quick mask mode by clicking the circle in the square again.

*Note the colors for the gradient should be black and white.

STEP FOUR:

Go to Filter>Blur>Lens Blur.

STEP FIVE:

Make your Lens Blur settings like these, but feel free to play around with them if you want:

STEP SIX:

Bask in the glory of your wonderful creation and pat yourself on the back for a job well done.

BONUS STEPS!!!

Play with the colors and curves in the Image>Adjustment menu.

Looks just like it was produced on a tilt and shift lens :)

Try this website out, it gives the same effects but without the hassle of doing it yourself.
