The resonnd why its 3/42 is couse its in a .rar file, if u look at what it detected then u see :)

How to use:

Download the .rar file from mediafire, then extract the folder to youre desktop. then move the folder to programfiles, or a location u would like the software to be. then create a shortcut from the Wybuild.exe inside, place it on youre dekstop/other place, then youre good to go :D!

Enjoy ;D

Thank you for this!

Never know when this can come in handy :)

skatomagia - April 21, 2011, 5:15 am

can you please tell us how to use this in vb.net ?? not c

please this looks great :)

MultiMedio - April 22, 2011, 1:10 am

Its the same conect, u just make a updater, then add a dll :)
