I know you can make an AIM screen name with under scores and dashed but it seems as if the tutorials no longer work. I have tried various screen names and they do not work.

I am using this when I am signing up: javascript:document.forms[0].submit();

Pretty sure it was patched by AIM around a week ago now. Can't be 100% sure, but if I remember correctly, there were a few rage threads on other forums that I visit frequently.

It's because the injection you are using is wrong... I tried to edit the tut when I saw that it auto changed it... But it was too old to let me edit, so I even posted it in the tut on page 2 I believe...

You don't want jdocument.forms[0].submit();

You want it to look like this... Code javascript:document.forms[0].submit();

Also, if you still can't get it to work, PM me your e-mail and I will send you an invite for project phoenix. It's AOL but you can make those screen names without an exploit

v3n3n0 - June 12, 2011, 11:15 pm

Hi can you show me how to make screen names with "." on AOL please..

I tried the javascript:document.forms[0].submit(); and it does`nt work....thanx
