Looks like you just leeches the code, and used a free gui. Seriously, give credits. Also just scan again, sketchy.

Bacardi - April 25, 2011, 11:49 am

Seems clean.

this does not steal shells, looks really nice! .NET reflector FTW!!

credits need to be given to aenohack!

I went through this program with Bintext and looked at the coding, it's a PHISHER. THIS STEALS YOUR SHELLS, I even tried real shells and it didn't even check them just put them in random boxes. It steals all of your shells, and doesn't work. Remove this thread, look in my threads if you want a real shell checker its similar to this but doesn't STEAL YOUR SHELLS -.-
