10,000+ Shells can we see some proof? I mean yeah it probably does hit but that doesn't mean you have 10k let alone you can't use all the power from the 10k even if you had 10k shells...On another note the hatelist is cool idea but its kinda a rip to cause many people have dynamic ips, all they'd really have to do is reset their router...Anyways the interface looks pretty sweet.

there was a discussion before that devil needed to prove his shells and he proved it and of course it wouldnt use them all at once , he has never claimed that.

i have liberty reserve in place so that people cant dispute. there are people who will dispute and im making sure that they payment system never gets locked because of this. also liberty reserve stems how many people have it.

BFF HA Y AN BOI - May 1, 2011, 6:25 am

Ok fair enough. Can you answer me the question about the hatelist deal? I mean isn't it kinda bogus that when people put that one IP down on the hatelist, what happens if they have a dynamic IP or are you hitting a different way? I mean why should people pay \$1.00 a hit? Because half of the people now days have dynamic IP's, all they'd have to do is reset their router.

Another question, can your booter take down major sites or just small ones?

devil2005 - May 1, 2011, 12:10 pm

Answer to question one: It isnt bogus because there is no way of coding for peoples dynamic ip addresses and if i had an edit button on the users then whats to stop them from entering in differnt peoples ip addresses jsut to change the user. it is only \$1 and im sure that it is far less than if i made it a monthly payment system and then allow people to edit the values in the hatelist.

Answer to question 2: Even though it will take websites down it isnt designed for that purpose, as it will boot for 70 seconds each hater every 2 hours for one month. the reason why hatelist was made was because when trying to hold someone or a website offline it kills the shells so it is more designed for "haters" not "websites you hate". major websites usually have more than one server and ddos protection so it can get alittle bit complicated when defining a major websites but to simply it , it will take servers down. but for 70 seconds im not sure people will really notice it. maybe i could code another script just for that but it wouldnt use shells and it wouldnt be anytime soon as i have just released this.

Well thanks for the answers and I admire your work. Any chance you'll be selling the source anytime soon? And/or if you did, what would the estimation be or would you accept High bids?

Ahh the shell checker, is pretty good I must say but I can I already have your shell checker script, pulled it through an ethical program in Backtrack. Haven't gave it out, so don't worry. If you decide on selling that interface tho, for the shell booter. I'm offering you \$250.00 for its unique design via Alertpay or Liberty Reserve. It wouldn't be a booter I would sell, for personal use and personal project.

devil2005 - May 2, 2011, 7:06 am

i could accept \$250 LR for it

I can't edit my post above:

I have try, never my ip victim got d/c, i have do some tests, this service do not make any d/c or lags.
So i dont know what is the problem, i have try differents ips and ISP, same result.

I dont tell its bad but for be sure i have try another booter and this time the ip got lagged, so why 10 000 shells can't maked any d/c or lags on home ip ?

Very odd

thank you both of you, my graphics card has been out for 2 weeks , expect some updates.

devil2005 - July 16, 2011, 2:04 pm

i added a little cronjob every week the shells will be rotated. i have a huge database so it could take about 30 minutes to finish, dont worry, you can still use the booter jurying this time.

ABBDON - July 17, 2011, 12:03 pm

Sooo I'm just a little bit mad.. or I am wrong thats possible afcourse but If I'm right... You logged all the allive shells from the shell checker what has been up the last months?.. I was scared for a thread like this.. when you released your shell checker, I already had the feelings that you was going to logg the alive shells what other booter owners scanned all that time.. And I knew you was going to release a powerfull booter once.. and yeah.. here it is.. with 10K alive shells xD hahahahaha

I dont like this...

Just saying^^^

(i can be wrong..)

devil2005 - July 17, 2011, 12:35 pm

the shells were donated. many shell booters went down like angryworms shell booter and phenoms they donated their shells to me. thats why i have so many. the shell checker doesnt log any shells because the only shells that would be checked on it would be public or the ones that have been leaked anyway. which i am not interested in.

ABBDON - July 17, 2011, 12:40 pm

Alright i trust you on ur word.. i was just interesting about this, anyway you had that shell checker source right? may I see that please.. Or was it only for ub3r members?

Greyersting - July 17, 2011, 12:43 pm

SITES DOWN FOR ME!!!!

Is it down for anyone else?

ABBDON - July 17, 2011, 12:44 pm

yeah its down for me either

devil2005 - July 18, 2011, 5:39 am

It is probably being DDOS'd or many people are using it as the shell checker is extremely popular and the shell checker source was given away aswell showing that it doesn't save shells.

why is it \$1 per person cant it be 1\$ for life time ^^

devil2005 - September 13, 2011, 2:26 pm

\$1 per person is for hate list not for the booter.

#Winning - September 13, 2011, 5:27 pm

is it possible to chose when these people get booted?

devil2005 - September 14, 2011, 4:45 am

with the devilsript booter you choose when they get booted. with hatelist they person gets booted every 2 hours for 1 month.

devilsript is \$25 for lifetime

hatelist is \$1 per person for 1 month of getting booted every 2 hours.
