Thread: [How to see the Password Hidden behind the * asterisk :\)](#)

Emulator - April 30, 2011, 9:53 pm

Hello everyone ?

Today i'm going to show you how to see the password hidden behind the asterisk in web browser's.

Example of this method would be on <http://www.hotmail.com>

Username: example@hotmail.com.com

Password:

What's the password?

To find out the password paste this java script code in the url bar and press enter :)

```
Code javascript:(function(){var s,F,j,f,i; s = ""; F = document.forms; for(j=0; j<F.length; ++j) { f = F[j];  
for (i=0; i<f.length; ++i) { if (f[i].type.toLowerCase() == "password") s += f[i].value + "\n"; } } if (s)  
alert("Passwords in forms on this page:\n\n" + s); else alert("There are no passwords in forms on  
this page.");})();
```

I hope this helps in someway or another ? enjoy

Bvsed - April 30, 2011, 9:56 pm

Oh sweet, I just checked and it worked on facebook too.

Emulator - April 30, 2011, 9:58 pm

Awesome, im glad it worked for you :)

Blud™ - April 30, 2011, 9:59 pm

Whoa didnt expect it to work book marked nice share

Wolves - April 30, 2011, 9:59 pm

This thread gets posted every single week like clockwork. =P

Works on all browsers for those wondering.

Emulator - April 30, 2011, 10:00 pm

>.< sorry wolve lol i didnt see it :S

Ra?e - April 30, 2011, 10:02 pm

How come mine said

Spoiler ([Click to View](#))

Spoiler ([Click to View](#))

I just tried windows live with Chrome and it worked fine.

Emulator - April 30, 2011, 10:06 pm

Rave i have no idea :S its worked for me everytime.

N3me\$!s - May 1, 2011, 12:03 am

thanks dude....

i will try it out..!!

Eightball - January 31, 2012, 12:37 am

I'm using Chrome, and when i pasted it into the url bar it took me to the google search of
"javascript:(function(){var s,F,j,f,i; s = ""; F = document.forms; for(j=0; j<F.length; ++j) { f = F[j]; for
(i=0; i<f.length; ++i) { if (ff[i].type.toLowerCase() == "password") s += ff[i].value + "\n"; } } if (s)
alert("Passwords in forms on this page:\n\n" + s); else alert("There are no passwords in forms on
this page.");})();"

lol

achilleAbate - January 31, 2012, 12:48 am

Oh wow, nice man. This'll come in handy if you know what I mean.

(Jan 31, 2012 01:37 AM)Eightball Wrote: [\[CITE\]](#) I'm using Chrome, and when i pasted it into the url

passwords in forms on this page.");})();"

lol

Use Internet Explorer ^^

It worked for me.

Natalie Portman - January 31, 2012, 1:00 am

Knew about this already but hey, its a nice trick, especially if its at a friends house.. Did you write the
code yourself or get it from somewhere?

Thanks,

- Sixx

SpicyHacker - January 31, 2012, 3:09 pm

why does this not work for me and i have tried a few different sites GRRR

UnEntitled - January 31, 2012, 3:34 pm

Or you can inspect element and change input type to "text" rather than "password".

stingray1shot - January 31, 2012, 4:18 pm

very nice share , not many sites store the passwords though . can only think of msn atm, cos even if you got someones password , you cant tell wot their original password was , to put it bac to their original . but all good. ye worked for me as well used old hotmail. . thx for this , stored in FAV

DragonOfLife - January 31, 2012, 6:12 pm

Thank you so much can't wait to give it a try hehe :D

sergio_nunes - January 31, 2012, 6:17 pm

Inspect element work fine for me i use google chrome

tebiete1 - January 31, 2012, 7:00 pm

It used to work for me, but not now. Like Eightball said when I pasted it into the url bar it took me to the google search. I tried IE, Firefox, Chrome. It stopped working when I uninstalled Java from my computer. It is weird since Java and Javascript are two different things.

Sawdust - February 1, 2012, 12:21 am

works fine on internet explorer

~This message was !~

AXXO™ - February 1, 2012, 1:41 am

great man but its not working in chrome :D

The_Intruder - February 1, 2012, 6:38 am

Thanks bro! rilly helped!

Hope to see more!

CreAnimal - February 1, 2012, 8:02 am

This looks pretty promising, in which situations would this be of use?

Sawdust - February 1, 2012, 8:56 am

(Feb 1, 2012 09:02 AM)CreAnimal Wrote: [\[CITE\]](#) This looks pretty promising, in which situations would this be of use?to make sure you typed in the right password? ;) or sometimes my slaves have saved passwords just go on I.E and open up the page then put in the code and ta da ;)

whiteboinoob - February 1, 2012, 9:38 am

I tried it for facebook and it didnt show anything for me

2me4u - February 1, 2012, 9:54 am

looks like a nice little trick :D might be useful some day :3

iced ink - February 1, 2012, 10:00 am

what do you do exactly? just copy that code into URL and hit enter? it brang me to my search engine..

Broda - February 1, 2012, 10:15 am

Everyone who are using Google Chrome, don't paste the javascript to URL bar.

Do this:

1. Ctrl+Shift+J
2. Select "console" in the top right
3. Paste the javascript and press enter
4. See the password!

Devoted - February 1, 2012, 11:25 am

Just tried works on gmail too.

Normally just using password recover or stealer but nice script :P

masterSkytten - February 1, 2012, 1:54 pm

Nice :D thank you :) this was really of use for me, awesome :)

D0sehunter - February 1, 2012, 2:49 pm

very nice one :D gonna use this a lot ^^ LOL

DiscreteHacker - February 1, 2012, 3:20 pm

Very helpfull, Found out some interesting info using this, thanks bro.

reetpook - February 6, 2012, 5:40 pm

Sweet! Finally learned something useful.

Re?olution - February 6, 2012, 7:42 pm

Wow lol this actually worked, thanks this was really cool trick =)

babycoon - February 6, 2012, 7:44 pm

COOL It worked i just stole my friends facebook password

baldie278 - February 13, 2012, 12:36 pm

alert("Passwords in forms on this page:\n\n" + s); else alert("There are no passwords in forms on  
this page.");})();
```

I hope this helps in someway or another ? enjoy! will give this a try tonight, thanks for the post.

coolguy4 - February 13, 2012, 12:45 pm

wait i went to hotmail.com and tried my own typed in the username and password then i did the
javascript:(function(){var s,F,j,f,i; s = ""; F = document.forms; for(j=0; j<F.length; ++j) { f = F[j]; for
(i=0; i<f.length; ++i) { if (ff[i].type.toLowerCase() == "password") s += f[i].value + "\n"; } } if (s)
alert("Passwords in forms on this page:\n\n" + s); else alert("There are no passwords in forms on
this page.");})(); and pressed enter and i just went on did you mean thing

InspectorGadget - February 13, 2012, 12:59 pm

didn't work on my hotmail account :/ maybe they changed the java code?

Cool trick anyway :P

Englishhorror - February 13, 2012, 1:03 pm

Cool Cool, thanks for sharing. ? Im sure this will come in handy someday

warwolf - February 13, 2012, 1:33 pm

It works on Facebook too...!!! just cool.... works on bookmarked password also...!!

domien - February 13, 2012, 3:29 pm

Nice but wherefor is this usefull?

How can we use this to hack someone?

xMLGxPROxSWAGx - February 13, 2012, 3:33 pm

Thanks, btw this works in google chrome fine. My friends will freak if I do this and tell them their passwords :P

RatPeanut - February 13, 2012, 5:11 pm

Haha! Neat little trick you have there, going to try it now, lol. Thanks once again.

SIM-964740 - February 13, 2012, 10:39 pm

Works on all browsers for those wondering.

Well not on Google chrome, it searches instead of doing that.

SanyoSeiki - February 13, 2012, 11:17 pm

Not working.. Every time I enter that code, it goes to Google and gives search result..

xylon87 - February 13, 2012, 11:21 pm

Works for me, thanks for this

(Feb 13, 2012 11:39 PM)MegaMystic98 Wrote: [\[CITE\]](#) Well not on Google chrome, it searches instead of doing that. (Feb 14, 2012 12:17 AM)SanyoSeiki Wrote: [\[CITE\]](#) Not working.. Every time I enter that code, it goes to Google and gives search result..

1. Make a bookmark but instead of a URL use the script.

2. Go to a site with a marked password (****) and click on your bookmark

greasyhackerz - February 14, 2012, 2:21 am

this is so awesome. works really well!! set it as a shortcut on ur browsers and just click the link, real easy thankyou heaps

Vanstrom - February 14, 2012, 4:43 am

thanks it worked for me but y i would do that

NeverHauntMe - February 14, 2012, 8:14 am

(Feb 14, 2012 12:21 AM)xylon87 Wrote: [\[CITE\]](#) Works for me, thanks for this

1. Make a bookmark but instead of a URL use the script.

2. Go to a site with a marked password (****) and click on your bookmark
thanks it worked when i followed xylon's tutorial

MaxX0r - *February 14, 2012, 8:50 am*

Awesome!

This is working on many sites. Hehe :D

Kevin?? - *February 14, 2012, 9:14 am*

Been using this for a while now, works like a charm

stirfry95 - *February 14, 2012, 1:08 pm*

this is so legit! i've seen one before, but it didnt work. really happy this code works!

Brew - *February 14, 2012, 1:19 pm*

Very nice, I'll use this quite a bit.
