~ - Hiding Files with CMD - ~

Hey, guys. Today I'll be writing a tutorial on Hiding files with CMD. First, I'll explain what this does, and how hidden this will be.

Once you've "Hid" your file, it will be impossible to access, unless you know the File name, or perhaps basic knowledge with CMD.

Alright, let's get started.

I suppose everyone knows how to open CMD? Probably if you're reading this.

So now, Open CMD.

Find the Directory of the File (Or folder) you would like to hide. Once you've done that, type this into CMD "CD DIRECTORY*.

Ex:

CD C:\Acer\Hacks

Hit enter to Execute the command.

Now, once you've done that, type "attrib *FILE OR FOLDERNAME +s +h". That will make the File completely invisible.

Ex:

attrib Binkyp +s +h

Now the File, or folder should be invisible. If you're having trouble with this, just re-post and I'll make sure to add some images. Now to reverse it, so you can make your file Visible again. Repeat the process, but instead of "+s +h" do "-s -h".

That's all there is to it. Great for school if you have any Folders you'd like to keep secret, along with what it contains.

we don't need two threads about this

[img]<http://img31.imageshack.us/img31/420/screenshot2nm.png>[/img]

but got work for your first thread?

zer0pwn - May 5, 2011, 12:41 pm

Yeah, I had posted it in Beginner hacking.. And then realized I probably should've posted it here, so

I haven't removed that other thread yet... Lol, thanks. xD

thanh_hoai00 - May 6, 2011, 6:34 am

nice tut

thank you very much !!!

Dbof - May 6, 2011, 6:42 am

This is so simple to bypass. Just change folder options and unhide system files.

You could use SecretConverter to hide the contents of a folder:

zer0pwn - May 6, 2011, 7:31 am

Sorry, but nope. I didn't use the foolish "Hide-File" option. Nice try ;)

RussianFederation - May 6, 2011, 10:21 am

Good tutorial. Thanks OP.

zer0pwn - May 6, 2011, 11:55 am

No problem ;) Glad you liked it.

badjoras - May 6, 2011, 1:32 pm

Very nice, didn't know this. Thanks for posting :)

(May 6, 2011 07:31 AM)Binkyp Wrote: [\[CITE\]](#) Sorry, but nope. I didn't use the foolish "Hide-File" option. Nice try ;) You know that

PHP Code

```
<?php
```

```
attrib file.txt +s +h
```

just makes it hidden and system file? This means you can see it if you activate hidden files and system files in folder options..???

Indulg3 - May 6, 2011, 2:19 pm

BinkyP? From ROBLOX? ;) Hey man, how you doing? (You probably don't know me, but w/e :D)

skulworthy - May 6, 2011, 2:24 pm

Nice one, but can u send this 2 me by private message and include instructions of the cmd stuff please

:)

(May 6, 2011 07:31 AM)Binkyp Wrote: [\[CITE\]](#) Sorry, but nope. I didn't use the foolish "Hide-File" option. Nice try ;) Yes you did, indirectly, you changed the attributes to hidden instead of right clicking it, and so on. The other user was correct, but this is still a great and easy way when you need to hide multiple files.
