Thread: [\[MOD\] iStealer 5.0 \[MOD\] + Tutorial!](#)

Venk - August 21, 2009, 1:15 am

Download:

[deleted]

Tutorial:

Step 1:

Register at <http://www.blackapplehost.com/register.jsp>

Step 2:

Go to UserCP.

Click "Create/delete MySQL database"

Name the database what you want, it will include your username.

In this example my username will be "example".

I have named my database "example_db" J'

Press "Create Database"

Now for the user, I have named mine "example_user"

Password can be anything, mine will be "passw0rd"

Press "Create User"

For Assign Priviledges, make sure the user and database are selected on the list.

When all boxes are ticked, press "Assign Priviledges"

Step 4:

Open \iStealer5.1\PHP Logger\index.php and edit the configuration information. Open \ iStealer5.1 \ PHP Logger \ index.php

All of the information is commented at the side, it's clear what it is. T

Step 5:

At BAH, go to "File manager" in the User CP and upload index.php & style.css

After this, your iStealer is set up,

Code:

<http://username.blackapplehost.com/index.php>

Log in there to view your logs.

Step 6:

Open iStealer 5.0.1 and fill in all of the necessary information.

The "Url" will be <http://username.blackapplehost.com/index.php>

This is from my mates website, Worked fine for me.

Thanks,
Adam

REP+ if liked

Hmm.. You'd think it would of been detected by more A/Vs..

kutmustakurt - August 21, 2009, 1:42 am

DO NOT Download

The file is not iSTEALER

@ Venk

DO NOT try to infect members on HF.

Don't you think I would recognize a file crypted by me.

http://anubis.iseclab.org/?action=result&task_id=140708613b1e9d054c96d60d4d8b93bd5&format=html

numan007 - August 21, 2009, 2:11 am

was a good sharing but it is already posted

OWNED by the admin ?.

I don't get it. Why don't they give up already? Infecting us, it's useless because we scan everything.

BAD PEOPLE ?.
