Thread: [\[Src\]All my sourcecodes - Old & New](#)

BaussHacker - May 16, 2011, 11:35 am

This is all my sourcecodes that I had on my laptop. Old & News.
Some might be useless, others might be useful.

I did not edit anything in them before the release.

Size: 35MB

I have not provided any scans, either you trust me or not.
If you want a scan, then you can do it by your self.

Thanks.

Please do not flame me, some of them are very old or empty.

?

Zombie++ - May 16, 2011, 11:39 am

Im gonna check those thx for release! <3

Why would we ask for a virus scan, these are source codes.

Nonetheless, thanks.

Peoples still asks for them sometimes. ?

The-One - May 16, 2011, 11:49 am

Whats the CO's server it's patch?

BaussHacker - May 16, 2011, 11:49 am

It's PServer sourcecodes.

The-One - May 16, 2011, 11:52 am

(May 16, 2011 11:49 AM)BaussHacker Wrote: [\[CITE\]](#) It's PServer sourcecodes.
Yes, which has a patch? Which one?

EDIT: It works on a patch, I want to know what patch.

5135, 5165 ermm. I don't remember really. If you know ProjectX, then I were owner of that server.

15downloads, 7 replies O.o

Nonetheless, thanks.

Because if malware was binded to some of the source files or folders, it could still infect your system. Even though most don't know how this works, just remember there is always someone a step ahead of the rest of us with that.

Also remember that regardless of scans, a file could be easily FUD, as seen all over this forum.
The above is for educational purposes.

I trust OP.

I will be downloading this later, as it will be an interesting read.

Not if you check the source and compile your own copy.

WESTi - July 23, 2011, 3:12 am

cheers man I like looking around sources to pickup new things.

Will download it later :D

So you can get the contents without opening a file?

Remember that malware can be binded to any file type if the cracker knows enough about the file management in windows. Keep in mind that a file doesn't have to have execution rights to have malware binded to it, a good example of this is when it is binded to an image.(possibly binded to an icon if you include on in a source pack)

Keep in mind this is simply a theoretical discussion, and that OP is 100% trustworthy.

RiperFish - July 23, 2011, 7:12 am

Thank's for this great share man.

BaussHacker - July 23, 2011, 7:56 am

Well you cannot infect code files .cs or the project files .csproj, that way you can just open them in notepad and you can view the codes. You can check if it's infected. You can only have executable files being able to infect, even binded files are executable. I could be wrong, but that's how I understand it, notice I don't look much into malware stuff.

KarmasRage - July 28, 2011, 10:39 am

Fixed my problem. Thanks for posting these sources, I've already learned a lot from them.

BaussHacker - July 28, 2011, 10:44 am

(Jul 28, 2011 10:39 AM)KarmasRage Wrote: [\[CITE\]](#) I have a little problem with your WinSecure program that I need a little bit of help with. I looked at your code to understand how the program worked and saw the password to login and wrote it down so I could test it on one of my office computers and I ran the .exe and everything started up fine, but when I try login with the password that was in the compiled code, it tells me that it's the wrong password and now I'm locked out of my office computer. I just wonder if I didn't write the password right, can you please list the password here as it's supposed to be? It would be really appreciated.

Are you sure you ran the right executable? I don't know if there was win registration, if not, then rebooting should fix it. You can always run it in safe mode.

SIM-701256 - July 28, 2011, 10:45 am

Gonna download and check the sources out :)

Thank you for shareing

kgyl - October 8, 2012, 11:49 am

You are the best!!!! Very very very big thanks!!:D

Local Celeb - October 8, 2012, 12:08 pm

Thanks for the Share! I'm going to take a look at a few of these :3

In particular, Jelly compiler :P

mesy13 - October 12, 2012, 9:57 am

thanks for the job and partage i look that now !!

gungunfebrianza - *October 12, 2012, 10:03 am*

bookmarked, i will download your project sir :) thank you before..
