Thread: [\[TuT\] Telnet+pics BEST GUIDE \[TuT\]](#)

Bonza - August 25, 2009, 3:05 am

Hey all!

I have decided to make a telnet guide.

I know there has been a few before but im so bored you wont believe, Plus i will do my best to make this Tutorial the best it can be :)

Lets begin!

What you will Need!

Telnet Client - [Here](#)

Blue's Port scanner - [Here](#)

Telnet Client

How to Download Putty Telnet Client.

Firstly click [Here](#)

Second Click putty.exe

[IMG]http://i29.[censored].com/55hyet.jpg[/IMG]

Now click Save, And save it to your desktop.

[IMG]http://i32.[censored].com/2568u4x.jpg[/IMG]

Done.. its ready to use. No need to open yet..

[IMG]http://i26.[censored].com/e1b8lf.jpg[/IMG]

Port Scanner

(!00% Credit to Blue's)

How to Download Blue's port scanner

Firstly go to this website

[Here](#)

Then click the .zip download.

[IMG]http://i27.[censored].com/w9xrno.jpg[/IMG]

Click save, then save it to your desktop.

[IMG]http://i30.[censored].com/eaf9na.jpg[/IMG]

Right click the .zip file, Then click extract here.

[IMG]http://i25.[censored].com/21kyn49.jpg[/IMG]

Now your Port scanner is ready for use!

Ping

Now that you have your Port scanner and your Telnet Client, We can get along with the rest of the tutorial.

Find the website you wish to hack via telnet.

For this tutorial i will be hacking www.google.com :)

Click start, Run, Then in the box type CMD.

Or for vista, Start, search; Run, CMD.

[IMG]http://i30.[censored].com/5lufz9.jpg[/IMG]

In the window that pops up type,

Code Ping www.google.com Or in your case, type your website/IP you are hacking.

If you get an error, or something that says " Request timed out" The user is not online.

If you get a msg saying "Reply from 756.3.52.35.23" or something. Then it worked. And the the numbers after from, is an IP.

So if it worked you should get something like this.

[IMG]http://i27.[censored].com/ighflg.jpg[/IMG]

Scanning for ports & Telnet

Open blues port scanner and put your ip you found before into the start & End box. Then hit START SCAN.

It will now search for open ports that you can connect to.

[IMG]http://i26.[censored].com/2n064oo.jpg[/IMG]

In this picture, the open ports are 80 & 443.

Now open Putty, Telnet Client. and type the IP you are hacking, and the port. Then tick the box next to Telnet Then press open.

[IMG]http://i30.[censored].com/30kyrtf.jpg[/IMG]

You have now connected to the IP!!! CONGRATS!!

Hope you learnt something!

Naggerguy - August 25, 2009, 7:22 pm

The typing in putty is absolute piece of shit. Ill type in del and it reads it as ndel wtf

orientphoenix - August 25, 2009, 10:11 pm

not bad, just tried it and it worked, pretty cool

Bonza - August 26, 2009, 1:16 am

yeah putty fails.. i dont use it. I use a paid online service.. just google for better ones.

J4M13 - August 26, 2009, 1:49 am

Good tutorial, I prefer windows telnet myself though.

Gosthacker - August 26, 2009, 2:33 am

sweet, im having trouble with telnet

Bonza - August 26, 2009, 4:04 am

awwk if you need further help let me know :]

Headbustaz - August 26, 2009, 4:56 am

thx for the tut its working great ?

The Name's Bing - August 26, 2009, 4:58 am

Im sort of new to this but willing to learn!

What can be done after connecting to the IP??

Good TuT btw! :)

Headbustaz - August 26, 2009, 5:00 am

(Aug 26, 2009 04:58 AM)bh92 Wrote: [\[CITE\]](#) Im sort of new to this but willing to learn!

What can be done after connecting to the IP??

Good TuT btw! :)yes that i want to know 2 her....great tut btw

Venk - August 26, 2009, 5:06 am

I connected to a IP Now what do u do?

jscott82bx - August 26, 2009, 5:48 am

if you could possibly connect, you should make a command list

Valour - August 26, 2009, 5:53 am

i think this is actually very cool

thxxx for this post

catlover - August 26, 2009, 6:32 am

gr8. thanks, i know only initial config of telnet. it would be gr8 if some one tell me how to run shell on ports using telnet or bufferoverflow technics. Thanks

Mongoose - August 26, 2009, 7:45 am

gr8 tut buddy thanks for this

Self-Lobotomy - August 26, 2009, 12:17 pm

Nice thanks a lot for this, I just have a question ; can you get caught doing this ? Is there a way to avoid it?

EDIT : Also, are the commands you use in telnet the same as ms-dos ? And, does the telnet client you can access by typing telnet in the command prompt do well the job?

Bonza - August 26, 2009, 3:38 pm

(Aug 26, 2009 04:56 AM)Headbustaz Wrote: [\[CITE\]](#) thx for the tut its working great ?

I will be making another TUT for that.

ylexigun - August 26, 2009, 5:16 pm

GREAT ! this tut .. all working very well ,hope you will continue this nice Tut/info .

Thanks very much !

Edit some extra..

Hmmm. Just tryed some other web sites and the port scanner stop working , give this message..Shutting down scan engine..Done!

Some one have an explanation of that ?

Bonza - August 26, 2009, 5:47 pm

Hmm.. Sorry :S That has never done that to me :S what website did you try?

ylexigun - August 26, 2009, 6:01 pm

First i try on google , thats work fine .. and i try some other sites .the port scanner stop !

I go back try on google again nothing work anymore !

Only work 1 time !

Tryed some small hotel sites and yahoo

Kewlhotrod - August 26, 2009, 6:13 pm

Nobody has answered what this is used for... That would be nice knowledge to have.

SmileyCat - August 26, 2009, 6:25 pm

start > run > telnet :)

ylexigun - August 26, 2009, 7:19 pm

(Aug 26, 2009 06:13 PM)kewlhotrod Wrote: [\[CITE\]](#) Nobody has answered what this is used for... That would be nice knowledge to have.

Install a Trojan !!

My Bullguard just see a Trojan Generic Heur .. something like that !! Related to this program files... ! sorry i forget take a screen short of the warning ..

Please someone make a good scan of this download files !

Bonza - August 26, 2009, 7:45 pm

Erm. It is not a virus. If anything it might be a hacktool. Not a virus -.-

bobblejim - August 26, 2009, 11:45 pm

uhm... how on earth is this hacking? its connecting to an ip via telnet that isnt hacking in the least lol. Besides why not just connect via telnet with windows?

adriano4444 - August 27, 2009, 12:06 am

(Aug 26, 2009 11:45 PM)bobblejim Wrote: [\[CITE\]](#) uhm... how on earth is this hacking? its connecting to an ip via telnet that isnt hacking in the least lol. Besides why not just connect via telnet with windows?

@ the "Besides why not just connect via telnet with windows?"

because putty sounds better =D

Bonza - August 27, 2009, 1:19 am

Exactly! Lol =]]]

And also some computers, Mine, Do not come with Telnet.

??\$??? - August 27, 2009, 2:35 am

thx for the tut its working great

Bonza - August 28, 2009, 5:57 pm

np dude :]

Aurelli - September 7, 2009, 6:42 pm

It's really helpful thanks !!!.. I owe u ;), *Edit" What if the blues port scanner gives me 4 boxes and i cant know my port pl0x help.

hoLe[R]a - September 8, 2009, 9:42 am

It's writen very simple. Thanks for this useful tut. :)

Eyman - September 8, 2009, 11:36 am

Would be great if u explained for those poepel about what to do after connecting to ip.

skunkNL - September 8, 2009, 11:44 am

thx for the tut its very clear

eXeSoul™ - September 8, 2009, 2:27 pm

nice tut!!!!!!!!!!!!!!

Yoinks - September 9, 2009, 4:46 pm

Connecting to an ip is easy. The hard and unexplained thing is "What can we do once we are connected?" This tut was not hack realated what so ever. Its simply using a windows tool to connect to an ip. No hacking involved?

Zero Phlame - September 9, 2009, 6:19 pm

I've always been more of a windows telnet guy myself, but one Windows 7 and Vista PuTTY is a great alternative.

Volker Putt - September 9, 2009, 11:31 pm

... I'm connected... and now?

Only type some commands and they will be execute on the other PC?

... Someone have the link from other tutorials, beginning at the established connection?
For example how to load a trojan at the remote PC without warning the user?

Greetings

bhkfsg - September 10, 2009, 12:02 am

Thank.. I am having problem with telnet on my window

d.mercelli - September 10, 2009, 2:18 am

thanks for the tutorial but what can you do when you are connected with telnet?

ignas177 - September 10, 2009, 10:06 am

Yes, what the fuck can we do after connect?

aquabats - September 10, 2009, 8:22 pm

Tip for vista users,

Shortcut for run is "Start Key + R"

no need to search for it

bobblejim - September 15, 2009, 6:40 am

(Sep 9, 2009 06:19 PM)Zero Phlame Wrote: [\[CITE\]](#) I've always been more of a windows telnet guy myself, but one Windows 7 and Vista PuTTY is a great alternative.

Not sure about windows 7 however vista does have telnet, Its just not enabled by default. google enabling telnet for vista. It wouldnt surprise me if its the same for windows 7 as well however..

on a side note... i sound like a real dick sometimes :\ {note to self: Try to be alot more polite when posting replies}

Gambling Freak - September 15, 2009, 9:56 am

Nice it works, But is there anything I can do once that telenet window is open and im in their IP? :)

TheBlackMarket - September 15, 2009, 10:37 am

Good tutorial dude! thanks.

ignas177 - September 15, 2009, 12:43 pm

so anyone can say what can we do with it?

Bonza - September 15, 2009, 4:17 pm

Thanks for comments guyz, Ignas, i will make a tutorial later for that.

aquabats - September 17, 2009, 12:03 am

yeah a Tutorial on what to do once you are connected to their IP would be great

+repped you by the way

CinderGhoul - September 17, 2009, 5:36 am

its askin for a login and pass -.-

Bonza - September 22, 2009, 8:33 am

Cheers for rep.

@Naix Does it say what password?

Kopimi - September 28, 2009, 3:52 pm

Putty just crashes when I Connect.

hazard74 - September 28, 2009, 5:47 pm

Wow nice TUT nice...

i learn someting from u

Thx A Lots.

Bonza - October 22, 2009, 5:38 am

(Sep 28, 2009 05:47 PM)hazard74 Wrote: [\[CITE\]](#) Wow nice TUT nice...
i learn someting from u
Thx A Lots.
Your very welcome :)!

Joser - October 24, 2009, 3:54 pm

Could i get ip's from xbox live using cane and abel and do this?

Sylt - November 1, 2009, 4:39 am

I've a problem. After i open the telnet connection i putty. It stays up for a seconds, the same picture you have in your tut. Black background with the little green thing in top corner. Then suddenly i get the "windows error" sound and it crashes.

What's wrong?

Valour - November 1, 2009, 6:20 am

telnet or even putty just gets hanged when i try to connect some ip to an open port of it
so is there any way i can do it ??

borowest - November 2, 2009, 3:01 am

i think to avoid being caught you have to delete the telnet logs

Arês™ - November 2, 2009, 3:23 am

nice TuT but these is not usefully if we don't know what to do next when we are connected

Mimiring - November 2, 2009, 5:38 am

Nice Tut Everything works for me great

SWS - November 4, 2009, 10:12 pm

;I failed for me, I use windows telnet.

TheInvader - November 5, 2009, 8:30 am

Thanks for this tutorial works fine.

Bonza - November 20, 2009, 4:28 pm

Np guys!!!
-2 short-

ov3rkill - November 20, 2009, 5:34 pm

nice, thats alot dude

Bonza - November 20, 2009, 6:41 pm

Your very welcome :)

romor24 - November 20, 2009, 8:20 pm

For everyone that keeps saying crap about not knowing what to do after, please shut up ;)
Hes said 2 or 3 times already that he'll make a tut for it D:<

Very nice tut by the way :D

Bonza - November 28, 2009, 1:57 am

Finally... lol, thanks :)

shweetu - December 7, 2009, 12:39 am

hey tell me how to crack ftp site passwords and login with telnet!! and this putty thing is shit!!

Bonza - December 20, 2009, 7:19 pm

Wow you guys are jerks, i used putty as a suggestion... Google for a better one.

El Patron - December 21, 2009, 2:25 am

blueportscanner link is dead...

Bonza - December 21, 2009, 3:51 am

Google it :DD

-2short-

YCyclone11899 - December 26, 2009, 4:22 pm

Hey man, very interested... any updates on what to do next? I'm not trying to load a virus or anything on someone's computer, but would really like to have access to their files/hard drives. At the most... potentially install a keylogger, but not right now. Any word on how to do this once connected?

Thank you for the tutorial, it has been a huge help so far!

Bonza - December 26, 2009, 9:55 pm

There are many ways, some a cannot be bothered explaining, but I am sure that Google can provide a simple answer.

And for your needs I suggest using a RAT, if you wish to access there HDD files.

VORTEXPGM - December 26, 2009, 11:39 pm

Nice tut ;D and thanks

VipVince - December 27, 2009, 3:21 am

Lol a decent half written tutorial,i didnt think you would stop with 'now you have connected to the port' lol,now you have all the eager user's filling the thread with 'now what'.

AwwwYeah - December 27, 2009, 3:41 am

what can i do now if im using otehrs ip oO?a big tut,but not what it does anywayss lol...

niels8500 - December 29, 2009, 1:17 am

Blue's PortScanner have a dead link.

unknownkiller - December 29, 2009, 3:45 am

So what can i do after i'm connected? SEnd rats?

Bonza - December 31, 2009, 3:51 pm

If you knew how. Just think of an IP as a mobile number, you can connect to another computer using there IP, as can they.

Cosmic Brownie - January 17, 2010, 8:34 pm

Im sry dude but this tut is bullshit. You have time to post replies saying "your welcome" but weres the actual hacking part in this tutorial Last time i checked this was a Hackers Forum, I suggest Learning yourself what to do with an ip b4 going and posting half assed tuts.

bsides that goodjob i guess (:

whatisthis - January 17, 2010, 10:22 pm

good post brother thanks.

Halfbakedoreo - January 19, 2010, 6:52 am

Yes this is very much mostly bullshit seeing the only thing you can really do is just get headers after you are connected. Nice tut but now you have others intrigued to know whats next when there is really nothing and you yourself know that.

Bonza - January 20, 2010, 4:22 pm

@Halfbakedoreo

If you took time to read some of the other comments, you would have noticed I am working on PT2. So to flame me like that is rather stupid...

@Everyone else...

I have just returned home from my holiday and I will start working on the Telnet Guide Part 2. Thank you.

velimirius - February 3, 2010, 7:16 am

helpful tut.cheers man!

DarkNess93 - February 4, 2010, 7:21 am

Very good Nice Work D

Quintic - February 4, 2010, 7:24 am

Thx for the tut keep the work up ?

Kro0lTe4 - February 7, 2010, 10:39 am

Thank you! Looking Forward to Part 2 =D

Bonza - March 13, 2010, 5:11 am

thanks all! :D loving the comments.

lorens13 - March 13, 2010, 6:18 am

This is nice but,I can't download the blues port scanner,anyway thanks for sharing^^

blackstars09 - March 14, 2010, 12:15 pm

I prefer the cmd but good job

Troxin - March 14, 2010, 12:18 pm

This is a good tutorial, clean! :D

TheCodex - March 16, 2010, 11:14 pm

Just go to control panel -> programs/uninstall programs -> Turn on windows features at the left and locate Telnet and Telnet server check both of those boxes and wait like 30 min to an hr then Poof you have telnet.

patsy2 - March 17, 2010, 1:33 am

The site for the port scanner is down ?. You got any other sites?

OnlyMeDontPanic - March 17, 2010, 2:33 am

Nice Tutorial, nothing new to me tho, cant wait for part two thanx for the post.

Bonza - April 1, 2010, 7:43 pm

Your very welcome, Should be out soon, I hope.

Family trouble atm.

pie - April 1, 2010, 10:34 pm

No offense to anyone but when it comes to port scanners if you haven't heard of NMap you fail... It's THE network scanning tool. <http://nmap.org/>
Find some books on it, mess around with it, use it!

VipVince - April 2, 2010, 2:18 am

Yeah Nmap should be used when real hacking is concerned, as far as telnet goes, old and imo no longer useful, as better tools have been created that work with more power.

HughGRection - April 3, 2010, 12:15 pm

(Aug 27, 2009 01:19 AM)Bonza Wrote: [\[CITE\]](#) Exactly! Lol =]]]
And also some computers, Mine, Do not come with Telnet.
From the looks of it you have Vista. To turn on telnet you go to programs and Features, Click "Turn Windows FEatures on or Off then you wait for it to load and check telnet Client and Telnet Server(I think it says Server)and click Ok. It takes a while for it to turn on. Hope this helps.

hack 4 you - April 16, 2010, 2:39 am

Nice, ive been figuring it out for mac, not thay diffrent.

??tacl??m - April 21, 2010, 10:54 am

TELNET is crap, sends passwords and w/e in plain text. Use something crypted like ssh/telnet (PuTTY). Learn as much as you can about what your using. If not, that's going up sh.ts creek without a paddle.

tipledown - April 21, 2010, 11:08 am

i recommend windows telnet client :D

SIM-121380 - April 21, 2010, 12:44 pm

It don't work for me on a LAN computer :(

chinagash - April 29, 2010, 10:42 am

Is it working for vulnerable websites too ?
[Btw : Nice tut * :)

Dr. Hobo - April 29, 2010, 10:52 am

Nice and clean tutorial :D

Valour - April 29, 2010, 11:09 am

i think now a days its better to use other types of attacks than telnet even if telnet might be the best thing to directly connect
btw good work
i thought of saying that you have repeated the tut but still as you said that you were bored so you wrote i considered

C09FF - April 29, 2010, 11:22 pm

Blue's Port scanner link not working please re-upload, thanks

SUNNY BABA! - June 5, 2010, 6:14 am

nice tut man thats great thanx??<>

EventHorizon - June 9, 2010, 12:33 pm

when i telnet thru command-line (not putty) and type "o www.google.com 80", i get the message saying

"connecting to www.google.com..."

and nothing will happen until i hit a new key at which point, the page's HTML code will dump and the command line will tell me:

Connection to host lost.

Press any key to continue...

does this mean i'm not connecting to the site? how do i fix dis?

axmetmcl - June 9, 2010, 1:31 pm

u cant do nothing with this tut. :

Kondry - June 9, 2010, 1:32 pm

Nice guide man.

I was having a few problems .

hahaha.lol - June 9, 2010, 2:12 pm

Nice TuT for getting educated with telnet..

you should also update it with [what to do after you are connected]

THANKS FOR SHARING!

crazy_shane - June 9, 2010, 2:57 pm

All i can say is fuck you leave people all thinking.. now what do i do this just takes the piss man don't post a tut if not gonna finish it

KryG - June 9, 2010, 5:56 pm

hmmm thats pretty coule.

great tut :]

SivaKuMar - June 9, 2010, 11:38 pm

after entering ip and port in telnet(putty) the window is closed automatically

please help me

ibotter - June 10, 2010, 2:00 am

looks cool lol, thanks

..too short

AneXA - August 31, 2010, 4:08 am

Thanks very much for this tutorial but i think everybody is waiting for the 2nd part so when is it coming ?

MetalBlade15 - August 31, 2010, 5:22 am

dude servers are too new nowadays for you to do anything in telnet.. but gud tut anyways

jackass666 - August 31, 2010, 9:06 am

thanx for this great tut it helped

pyro10122 - September 16, 2010, 8:20 pm

how do you know when you connect and yea what can you when you do connect and great tut btw i lerned alot

noid - September 17, 2010, 12:36 am

sweet, im having trouble with telnet

noid - September 17, 2010, 10:54 pm

yeah putty fails.. i dont use it. I use a paid online service.. just google for better ones.

Mastermind- - January 24, 2011, 1:37 pm

Could you very please reupload the pictures? :)

Thanks in advance!

SIM-570417 - January 25, 2011, 11:37 am

You call this hacking and you use a telnet client and say bullshits

this is not the best way

this is the noobs way to do things short

Quote:im so bored you wont belive

you are bored cos maybe you dont know how to make it with cmd or how to activate it in win 7

Next time use google or search button

r0nix - January 25, 2011, 1:12 pm

windows 7 just has it disabled, go to programs and features and enable it.

Demogorgon - January 25, 2011, 1:51 pm

(Jan 25, 2011 12:37 PM)patrioti Wrote: [CITE](#) you are bored cos maybe you dont know how to make it with cmd or how to activate it in win 7

Next time use google or search button

Windows 7 – Enable Telnet

1. Start
2. Control Panel
3. Programs And Features
4. Turn Windows features on or off
5. Check Telnet Client
6. Hit OK

After that you can start Telnet via Command Prompt. ?

Altrin - January 25, 2011, 1:51 pm

thanks for the detalied tutorial

n0th1ng - February 3, 2011, 11:49 am

Please update fotos. :) short to short....

Rexxar - February 4, 2011, 12:59 am

Nice tut., after sm try i got connection to a server but can u tell sm wrking commands aferward we got connected...

Btw Did it leave our trace at target(hacked) server like ip??
