Thread: [\[Tut\]How to set up a shell booter\[Tut\]](#)

Gone-KaPPaH - May 21, 2011, 11:00 pm

So ive been asked to make a tut on how to set up a shell booter so here i go

Step 1Download a source

<http://www.mediafire.com/?cn8naufvqcqyqcx>

Step 2Register a domain

Co.cc has free domains

Step 3Get some hosting i recommend paid hosting

Step 4Login to co.cc and set up the name servers to your domain when you have hosting name servers will be given and wait for it to be up

Login to your cpanel

Go to MySQL Databases

Create a user and database

One made go to the bottom and click add and set permissions to 777

Step 5Upload all the files you downloaded to the file manager

Go to dbc.php and open that up

Edit dbc.php follow what it says

Step 6Go to PhpMyAdmin in the cpanel

Upload the sql thats in the winrar go to import and find sql.txt

Step 7Register to desired username and pass

Go back to PhpMyAdmin

Go to the database you made with the imported sql.txt

Now go to users and edit your account

Set user level to 5

Set account active from 0 to 1

you may now login just add shells

Want to make a shell now? Go [Here](#)
