The output files may not be runtime FUD. This is just a basic binder and does not crypt your files anyway.

For timesake, I scanned on NVT and got [this](#) result. Stub is not detected by Antivir for now.

crypted server + clean program = clean scan result
crypted server + not clean program = messed up result
not crypted server + clean program = still messed up result
not crypted server + not clean program = f*cked up result

hope this helps^^

btw has anyone use this for cybergate server?
cuz i think my cybergate server got corrupted with this binder..
anyone has the same issue as mine or is it just me?:(

Thank you guys. Stub is still 0/33.

Though it doesn't give FUD output, it reduces detection rate. Don't expect public programs to make your files completely FUD. If any program does it, what's the point of people selling things in Sellers' section?

DinoMint - June 19, 2011, 4:54 pm

thanks for this binder i lvoe it

galeo8 - June 21, 2011, 2:22 pm

what does binding mean??

and what does crypting mean?? :)

3v0|v3 - June 22, 2011, 6:51 am

Binding is the process of making two files (Generally Virus + Media) look like one.

Crypting encrypts the code on your executable file (Virus) making it hopefully undetectable to Anti-Viruses

EDIT: Should I wait for this binder to be FUD, or just download right now? Opinions would be

greatly appreciated.

thedeadwalkk - June 23, 2011, 4:14 pm

If I bind a keylogger made with Ardamax, to a picture using this.

- 1) Will it be executable, and work as soon as they open up the picture?
- 2) Will it be detectable?

thanks

Keep it up. Hope to see more Releases from You !

Im new to this, can someone pm me with the answer:

So file 1 is the keylogger and file 2 is a txt file. After they're bound, it will act like a txt file, even if it will be .exe

I hope i didn't misunderstood something?

Koekert - July 15, 2011, 2:19 am

It will never be a .txt file that opens your keylogger. It will still be a .exe, but opens the .txt file and your RAT/keylogger on the background ;)

You can change the extension with an extension spoofer, even though that still doesn't always work yet.

The output files may not be runtime FUD. This is just a basic binder and does not crypt your files anyway.

For timesake, I scanned on NVT and got this result. Stub is not detected by Antivir for now.

(Nov 29, 2011 01:38 PM)-kamoka- Wrote: [\[CITE\]](#) Disable your antivirus & then try again did it but now i can't bind it two files .. when i click on ' bind two files ' there comes something weird and i get 2 files named : Binded and Stub.. when i open those files i get nothing. But each time bind other two files the kb's of the files Binded and stub increase .. What is the problem ?

Ty for helping

Thanks Support for this and all the other good works from your crew. We appreciate you all! Keep it flowing...

ultimatezone - January 12, 2012, 2:45 pm

nice binder i will check it out soon.

MrHax - January 12, 2012, 9:26 pm

Doesn't work for me... It will only let me pick .exe files. Even when I type in the full path of the .jpg it won't work...

KissAir - January 13, 2012, 4:27 am

Support™ I think there's a big problem in Binder i.e. it only bind .exe files. Please correct me if i'm

wrong.

Syberpro - January 13, 2012, 4:37 am

Thank you very much im about to test this out
