Thread: [\[TuT\] Simple Port Forwarding \[Automated\]](#)

BlackChaos - May 24, 2011, 8:55 am

Hey guys ?

This is my first real contribution to the Remote Administration Tools forum and I hope you all like it. So far, to my knowledge, there is no guide similar to this on HF. But if there is, then know that I have not leached anything from it. This is from my own experience and usage of this program.

First off, What is Simple Port Forwarding?

It is a program which assists you in port forwarding bu automating the entire process. So, instead of fiddling around your modem, you can safely and efficiently port forward without any cost. Yes. This program is, above all, FREE.

Before we begin, you'll need to download Simple Port Forwarding [Free Version]

You can find it over here at their official website:

[Download - Simple Port Forwarding](#)

After you've installed the program, open it and get your groove on:

I have highlighted in red all those fields which you need to change and those things which you need to look out for.

[img]http://i1210.photobucket.com/albums/cc404/BlackChaos619/1.png[/img]

First of all, select the drop down list and choose your modem. This program supports many modems including the following:

[Simple Port Forwarding: List Of Supported Routers](#)

So if you can't find your modem, you can request for it on their site.

After you've selected your modem, you can check whether its the correct modem by checking out the display pic on the right side.

Enter your Router IP address, and the Router username and password.

If you don't know you username and password, try one of these:

Spoiler [\(Click to View\)](#) (Jul 5, 2010 09:01 PM)Plutonium Wrote: [\[CITE\]](#) Admin -

Admin - Admin

Admin - Password

Admin - User

Admin - Root

Admin - Custom Password, Check underneath your router for it

Root - Admin

Root -

Root - Password

Root - Root

Root - Password

Root - Custom Password. Check underneath

User - Root

User -

User - Admin

User - Password

User - User

User - Custom Pass.

And so on.

Then click on "Update Router" and let the program automatically fill in the details in your router page.

[img]<http://i1210.photobucket.com/albums/cc404/BlackChaos619/2.png>[/img]

On the right side, there should already be a small window similar to the one in the picture above. If its not already there, go to Tools > Getting Started

Click on the button in the fourth option which says "Do It Now".

This will lead you to another window which will begin your Port Forwarding process.

[img]<http://i1210.photobucket.com/albums/cc404/BlackChaos619/3.png>[/img]

In this window, there is nothing of use unless you're looking for alternative port forwarding for games, etc. But since we're setting up for a RAT, we need to go to the Custom tab.

[img]<http://i1210.photobucket.com/albums/cc404/BlackChaos619/4.png>[/img]

In the Custom tab, there a few options we need to figure out.

First off, the name is quite easy. Just type in whatever name you want. Example: Cyber, Poison, etc. It can be anything.

For type, leave it as it is.

Enter 82 as your start and end port. And finally, type in your IP address.

Just click on "Add" and you're done! Congratulations! ?

But before we get too excited, lets calm the fcuk down and check on how we did. ?

[img]<http://i1210.photobucket.com/albums/cc404/BlackChaos619/5.png>[/img]

Going back to the starting tools, click on the button in the seventh option which conveniently also says "Do It Now" (creativity is not a strong point here apparently)

[img]<http://i1210.photobucket.com/albums/cc404/BlackChaos619/6-1.png>[/img]

Now we're just going to check out if your Port Forwarding was successful or not.

Enter your Port Number which, if you've been following this guide to the letter, will be 82. Leave the Type as TCP.

Note: Make sure your listening IP is correctly matching your IP.

Now just click on Begin and watch the automated testing procedure.

Note: If the procedure does not automate, just enter your port number in the web page which opens up within the window.

[img]http://i1210.photobucket.com/albums/cc404/BlackChaos619/7-1.png[/img]

If you've done everything correctly, then you should be seeing what I'm seeing. SUCCESS ?

So thats pretty much all there is to it. Simple Port Forwarding.

Hope you guys like it. It took quite some time to get this done and it was really something. If you do like it, any sort of appreciation would be appreciated. A comment, a PM, a bouquet of motherfreaking roses. ?

bommijn - May 24, 2011, 9:04 am

looks nice ;)

but where can i find the virus scan ?

Boxing - May 24, 2011, 9:06 am

Port forwarding takes me 30 seconds to do it correctly, but I guess it's understandable some people can't figure it out. Good guide.

BlackChaos - May 24, 2011, 9:06 am

(May 24, 2011 09:04 AM)bommijn Wrote: [\[CITE\]](#) looks nice ;)

but where can i find the virus scan ?

Its the official program from their website. You can go ask them for the virus scan ?

lol JK I'll upload a virus scan soon.

But, seriously, its clean :)

(May 24, 2011 09:06 AM)Boxing Wrote: [\[CITE\]](#) Port forwarding takes me 30 seconds to do it correctly, but I guess it's understandable some people can't figure it out. Good guide.

Thank you Boxing :)

This guide is for people who are, somehow, unable to port forward manually. Like, for example, when the modem user panel does not have a specified Port Mapping option.

Blixx - May 24, 2011, 9:14 am

Nice guide my Bro. I hope it will help some people to get there ports forwarded.

BlackChaos - May 24, 2011, 9:19 am

(May 24, 2011 09:14 AM)Blixx Wrote: [\[CITE\]](#) Nice guide my Bro. I hope it will help some people to get there ports forwarded.

Thanks Blixx ^ ^

I hope so too. A lot of new users get stumped when it comes to PF-ing

Telhast - May 24, 2011, 9:20 am

I vouch for this guy. No need of virus scans. Trusted member and I've downloaded this program from him.

Joey Tribbiani - May 24, 2011, 9:38 am

There have been threads speaking about this tool but no one really explained it. Well explained. ?

BlackChaos - May 24, 2011, 9:46 am

(May 24, 2011 09:20 AM)Telhast Wrote: [\[CITE\]](#) I vouch for this guy. No need of virus scans. Trusted member and I've downloaded this program from him.

Thanks for the vouch niggah <3

(May 24, 2011 09:38 AM)Joey Tribbiani Wrote: [\[CITE\]](#) There have been threads speaking about this tool but no one really explained it. Well explained. ?

Thanks Joey ?

Exactly. When I searched the forum, I found no exact tutorial, guide or even an explanation on how to use it.

I'm hoping this will help a lot ?

Grammar Rays - May 25, 2011, 9:15 am

That is sexy. 'nuff said. Follow this tutorial made by an awesome user if you really want to portforward like a pro.

EvilNerd - May 25, 2011, 11:44 am

I'm more interested in a tool that can made port forwarding in a remote machine ie one that I control.

ilias2006 - May 25, 2011, 1:30 pm

canyouseeme says connection timed out,and simple port forwarded says succesfull,i dont understand?

BlackChaos - May 25, 2011, 1:43 pm

(May 25, 2011 01:30 PM)ilias2006 Wrote: [\[CITE\]](#) canyouseeme says connection timed out,and simple port forwarded says succesfull,i dont understand?

If your port forwarding was successful, then you have done everything correctly.

If your connection timed out during that, then try re-doing the steps and see if you observe the same reading again.

ilias2006 - May 25, 2011, 1:59 pm

yea i have the connection time out since 3 days..i had all my ports forwarded until 3 days ago where suddenly everything closed (i didnt close it)i dont know how..

BlackChaos - May 25, 2011, 2:14 pm

(May 25, 2011 01:59 PM)ilias2006 Wrote: [\[CITE\]](#) yea i have the connection time out since 3 days..i had all my ports forwarded until 3 days ago where suddenly everything closed (i didnt close it)i dont know how..

Check with your ISP. Maybe they noticed something strange and decided to shut it down.

Reaping - May 25, 2011, 2:16 pm

Even this won't work for me, tried fcking everything. My router is fucked up.

BlackChaos - May 25, 2011, 2:33 pm

(May 25, 2011 02:16 PM)Reaping Wrote: [\[CITE\]](#) Even this won't work for me, tried fcking everything. My router is fucked up.

Restore the Router to default settings and try again after some time.

The instructions are correct.

If you think you may have misunderstood them somewhere, feel free to ask me here or PM me.

The Archenemy - June 1, 2011, 12:45 pm

Very nice, this can help even the most nooby people, like myself! I'm using ATT U-Verse and it worked perfectly!

?Screamo - June 1, 2011, 2:48 pm

Very very nice tutorial indeed. I could have used this some months ago grr ;)

BlackChaos - June 1, 2011, 9:29 pm

(Jun 1, 2011 02:48 PM)Screamo Wrote: [\[CITE\]](#) Very very nice tutorial indeed. I could have used this some months ago grr ;)

lol Better now then never eh? :)

Thanks for readin ?

Zokrin - June 1, 2011, 9:34 pm

Great tutorial. Never cared for PF and this makes it a bit easier. Might download it.

BlackChaos - June 1, 2011, 9:38 pm

This is one of the easiest ways to Port Forward especially if your modem doesn't have a proper setting for Port Forwarding.

Netrox - June 2, 2011, 3:05 am

Great tutorial but as someone said. Its NOT the best method of port forwarding.

its better to learn it yourself by going in manually on the router ;)

but thats just my 2cents...

-cheers

Netrox

[Delta] - June 2, 2011, 8:26 am

I used this software for checking but this software is very difficult to understand + this is trial version

THE HEADMASTER

Leg?nd - June 2, 2011, 1:27 pm

Nice tut but you could always use ProXPn

BlackChaos - June 3, 2011, 3:59 am

As I've said, this is only one of the easiest ways to Port Forward. This method is useful to those who have modems which have difficult layouts and settings.

DarkOrbit - June 28, 2011, 10:33 pm

bookmared this thanks for the guide

Raw. - June 28, 2011, 11:26 pm

when you say "add custom" and dont touch anything , mine only has tcp or udp it doesnt have tcp/udp .. can i still do it?

BlackChaos - June 28, 2011, 11:36 pm

(Jun 28, 2011 11:26 PM)Raw-bruh Wrote: [\[CITE\]](#) on the first part, when i click update router is says "you must have at least 1 port to forward".. what am i doing wrong?

Have you checked your router settings? Perhaps there is a built-in mechanism to disallow port forwarding.

Raw. - June 28, 2011, 11:45 pm

(Jun 28, 2011 11:36 PM)BlackChaos Wrote: [\[CITE\]](#) Have you checked your router settings? Perhaps there is a built-in mechanism to disallow port forwarding.

i got past that part, the part im stuck on now is, when i do the test it says succes, but when i see if the port is open on canyouseeme.org it says "connection refused" or "connection timed out" ...

BlackChaos - June 28, 2011, 11:52 pm

(Jun 28, 2011 11:45 PM)Raw-bruh Wrote: [\[CITE\]](#) i got past that part, the part im stuck on now is, when i do the test it says succes, but when i see if the port is open on canyouseeme.org it says "connection refused" or "connection timed out" ...

Hmm... I'm not familiar with that error. Try the process again and if it still fails, then you may have to try to forward a different port.

Raw. - June 28, 2011, 11:55 pm

(Jun 28, 2011 11:52 PM)BlackChaos Wrote: [\[CITE\]](#) Hmm... I'm not familiar with that error. Try the process again and if it still fails, then you may have to try to forward a different port.

ok ill try again, but what is another port i should use?i know i can use almost any but i dont know which ones are in use.

BlackChaos - June 29, 2011, 12:01 am

(Jun 28, 2011 11:55 PM)Raw-bruh Wrote: [\[CITE\]](#) ok ill try again, but what is another port i should use?i know i can use almost any but i dont know which ones are in use.

I suggest using 80 once again since it is the port for Hypertext Transfer Protocol (HTTP) used in the World Wide Web.

Raw. - June 29, 2011, 12:09 am

(Jun 29, 2011 12:01 AM)BlackChaos Wrote: [\[CITE\]](#) I suggest using 80 once again since it is the port for Hypertext Transfer Protocol (HTTP) used in the World Wide Web.

tried it and doesnt work, i guess i cant port forward my router..

there is alot of stuff checked off in my router settings, you wouldnt know if thats stopping it, or know the name of what would be stopping it would you ?

thanks for helping, and this is a good and easy tutorial if my router wasnt so shitty. lol

BlackChaos - June 29, 2011, 12:15 am

There are other tutorials for manual port forwarding which I suggest you to check out. Best of luck.
?

sorry if im annoying, i only have one more question. if i use utorrent to open my port so i can use a rat or ddos tool, would i lose all my slave/bots if i shut my computer down/restart it?

BlackChaos - June 29, 2011, 12:23 am

(Jun 29, 2011 12:18 AM)Raw-bruh Wrote: [\[CITE\]](#) sorry if im annoying, i only have one more question. if i use utorrent to open my port so i can use a rat or ddos tool, would i lose all my slave/bots if i shut my computer down/restart it?

I doubt it. But I suggest you should research more on that method as I'm not quite experienced with the mechanisms behind P2P softwares like utorrent.

And, its alright to ask questions. No one knows everything and asking is the best way to receive knowledge. ?

BlackxWaterUSA - June 29, 2011, 12:31 am

Thanks, this is a good TuT for the noobs :P

Its a good tut for anyone who is not able to Port Forward manually lol :)

bhushan - August 24, 2011, 2:05 am

thanks

bro

but my Default Gateway . . : 0.0.0.0

why is it so

?Dante - October 27, 2011, 5:04 pm

i am trying this now...hope this will work

dantehh

fwilde2 - December 15, 2011, 10:29 am

This was interesting to read.

Thanks

alexmx78 - May 3, 2012, 11:03 pm

Similar problem here. I opened ports 1608 and 1609 and Simple port forwarding says SUCCESS, however Canyouseeme.org times out. It is weird. Why would one accept the connection but the other wouldn't?
