Good luck with the sales anyways. ?

Statistics from my previous crypters show that people are only actually using 30% of all features included in crypter, and therefore why adding every single feature when its not going to be used. :)

Wrong. I don't know why people bother adding more features to crypters as in my opinion they are completely unnecessary a crypter should only CRYPT. Plain and simple and yes its worth the \$35 simply because it is 100% FUD. Also in my past experience with crypters, The ones that have loads of unnecessary functions usually are the ones who corrupt servers.

90% of PCs use the NET 2.0 as many common applications require a framework and the new OS Win7 uses it by default.

crypter stealth has been a great crypter but his life is over. fragrances at big ZERO has created this crypter, new codes and new features.

I'm agreeing to all of this, Manero is right. You can find some crypters here at HF for much higher prices, and most of them are rip-offs. At least, when you buy this crypter, you can be sure that it will WORK with all RATs\Keyloggers\Bots listed, and you can be sure that it will be auto-updated. This crypter is meant for those that know they are buying, i don't need shiny threads and massive amounts of vouches. I'm know what am I doing when it comes to crypters. This one may look simple but trust me it isn't. Code inside is very complex and advanced. So 35\$ is still a low price.

Manero2973 - May 27, 2011, 2:58 pm

just what you say my dear friend. you do not need guarantees to understand that you are a serious person and a very good coder. Quick question. If i use the binder to bind another file to it how many files can i add? 1 ? If 1 can i use darkcomet's binder to bind multiple files into one. Then from that i crypt that file? Will that corrupt or not ? eg Darkcomet server + binded with blackstealer + binded with another program.

THIS GUY IS THE BEST CRYPTER HERE. HE'S A EPIC GUY, AND FULLY LEGIT.

Not only was he nice, and kind, his service was top class. He even help me setup my RAT fully tested it, and made sure everything was working. The moral- this guy cares and is 100% recommended.

Hello,

When I bind my server with program, They are a error, Look please :

[img]<http://data.imagup.com/7/1121436154.jpg>[/img]

Why this error ?

[ZERO] - May 31, 2011, 9:15 am

What are you trying to bind with your server?

LiveSupportShop - May 31, 2011, 9:19 am

A VB.net Application , it is a setup .

[ZERO] - May 31, 2011, 9:23 am

Well don't know what may be the problem, because i see that explorer.exe causes some error? Do you use DarkComet by any case?

LiveSupportShop - May 31, 2011, 9:28 am

I use BlackShades NET,

Have you got msn ? For config & resolve my problem . via team viewer

It doesn't use stubs. Its CodeDOM, every build is pretty much unique.

For DarkComet , we have ton uncheck FwB explorer injection , so in which process it inject ? because we have ton select the startup in the crypter ? right

Edit : with this case uncheck and the Free version of the crypter , Darcomet is detected by KIS as Trojan generic

Guys please, have some patience, I'm working on update.

Reason why it got detected is, cause someone scanned it on VirusTotal.

Until I update RunPE #1, please use RunPE #2.

System[X] - June 21, 2011, 5:23 pm

Ok ill vouch, tryed this and wow, it worked like a charm.

Virus scans befor and after:

Befor: Result: 26/ 42 (61.9%)

After: Result: 2/ 42 (4.8%)

Same file :D

It worked great and i had a few rdp's with limited accounts where i could not remove the anti virus

software but my rat got in fine :D

Had no problems crypting, it all went smolth and took like 1 second for it to be done :)

So yeah a must have crypter and a massive vouch :D

Thanks

whats is the different with the new update ?

Null file info and the startup ? wich better ? with Darkcomet

[ZERO] - June 22, 2011, 4:06 am

Null File Info = Check it to make your installed file FUD for longer time.

Custom APIs = Remove detections when they appear by yourself by adjusting APIs.

Smaller Output = More effective, and faster.

Same file :D

It worked great and i had a few rdp's with limited accounts where i could not remove the anti virus software but my rat got in fine :D

Had no problems crypting, it all went smolth and took like 1 second for it to be done :)

So yeah a must have crypter and a massive vouch :D

Hey ZERO, why don't u add an assembly changer in the future? =)

That would be awesome! It's just a suggestion.

Did you try with Custom Injection OLD\NEW? Also, did you try without Custom Injection?

Manero2973 - June 23, 2011, 6:53 am

My test with Darkcomet on Kaspersky:

- Kaspersky Anti-Virus (All version) with custom old or without = byapassed all!!!
- Kaspersky Internet Security 2010 with custom old or without = bypassed!!!
- Kaspersky Internet Security 2011 with custom old or without = bypassed only injection in visual basic command line, proactive difese block and delete the file installation and regkey - response, when the slave restart pc it is lost.
- Kaspersky PURE - is not exceeded by any Crypter. The KPURE proactive defense utilizes a particular. If anyone can show me I am very happy to do testing. I use KPURE. this for now. but it is also working on this. With a little patience ZERO will be bypassed.

Difference between 0 Crypter & Stealth Crypter? Stealth used StringBuilder\Resource methods of storing data into the stub, 0 uses only pure code storing method. Stealth's RunPE was totally different than the 0's and the one that Stealth had didn't work quite well with Cybergate. Stealth's output was way too huge, 0's isn't. I now know many better ways to code a crypter and 0 is my final product. Stealth was one of my first experiments. That is the difference.

do not worry. ZERO is working on this, will be fixed as soon as possible.
This is because people continue to scan the servers online.

DO NOT SCAN ON VIRUSTOTAL.COM!!

Stells - July 10, 2011, 4:37 am

Never scanned it on virustotal.. I know the rules.. Hope you will heal the crypt soon!

Manero2973 - July 10, 2011, 5:20 am

is not addressed only to you but if you want all the customers that will remain long-fud

hshoo - July 10, 2011, 9:06 am

Zero you should banned any one opening any online scanner except scan4you
Please code a tracking method to track any one scan his crypted server online then banned his account
you can start a voting on this page about that

I think this is the only solution to keep it more time FUD

S0Rk - July 10, 2011, 9:12 am

Maybe people should be asked....

If you wanna scan your server, where did you go?

if answer is Virus total, jotti, virscan then forbidden to have the crypter.

if answer is my-avscan, scan4you then it's ok mate.

For BlackShades (the settings are the same that the first page of the thread) :

With Custom Injection 1 : Error with Visual Basic Command Line Center and explorer.exe has stopped working.

With Custom Injection 2 : The binder don't work :'(but the server work.

With Add to Startup and Browser Injection/Null Info : Error and she isn't apparent on the screen ??? (server don't work and binder)

With Add to Startup/Null Info : Server work but not the binder :'(

I bought this crypter for the binder mainly. Why for me while for most the crypter work?? :'(

Please Zero, can you fix this? or if it's just me, help me for solve this ? Thanks.

Sincerely,
realhax

sry for double post,

and after a long period when the server isn't lauched i have a message : this program isn't an apps win32 validate. (on all server before too)

Manero2973 - July 12, 2011, 3:51 am

@realhax

I do not think at all that the problem is on your test Crypter.

I do tests on any operating system and server works fine. the problem is the PC you used for testing.

First, missing the fremework 2.0 or visual basic Commander line is broken (vbc.exe). update vbc.exe

blackshades to always use the null file active and Custom1 not browser default, turn off the persistence, or try with any injection into Crypter only null file active so that injected directly into vbc.exe. in the server configuration in blackshades uncheck installation and injection.

Download vbc.exe -> <http://www.mediafire.com/?c01ktcrytrc5wq>

Copy vbc.exe to "C:\Windows\Microsoft.NET\Framework\v2.0.50727\"

realhax - July 12, 2011, 5:53 am

Thank you for your help i go try ;)

I disabled DEP and copyed vbc.exe, the server work but the picture binded doesn't start on my screen. :s Why ? Maybe on others pc ?

[ZERO] - July 13, 2011, 4:19 pm

Crypted file will start without vbc.exe

VBC is Visual Basic Compiler, and therefore it is needed to compile files via CodeDOM that is why its needed in case if it got deleted by mistake. Using Blackshades\Darkcomet Uninstall function when the server is injected into the vbc.exe causes its deletion leaving your system without the file needed to generate output with CodeDOM.

In this case the loss is 80% of victims

because if in any case botkiller/antivirus eliminates VBC can no longer infect the victim in the future if you do not insert the file manually, right?

[ZERO] - July 13, 2011, 4:45 pm

Invalid statement. If you use Custom Injection inside my crypter, you won't be needing vbc ever again. Anyways, not a single botkiller\antivirus will delete vbc since it is a system file.

realhax - July 13, 2011, 5:42 pm

Usually i launch my server from my PC, no from Sandboxie.

I tested about the VB project.

I crypted the file as a blackshade server normal. I launched the crypted file and look the screenshot :

<http://img836.imageshack.us/img836/9296/oulalaw.png>

The name of my file was 'aleleo.exe'

I have the even error about 'denied access' when i crypted the file.

PS: the file don't launched but i had this error.

For information I tested by putting a name different from the existing process to be injected and it gives me this error with the process name changed. (i putted csrss.exe)

I had the same erro on this update. I figured out the problem. After you crypt, dont click ok. Just move the output file in the DATA folder then click ok. and after that it will copy out of DATA folder and into crypter directory.

Zero, this works so good with Blackshades. I just wanted to tell you thanks for the great product.

do not need to change the extension Crypter. you can do it manually. exe, com, bat, pif or scr
are always executable files
Perhaps you say to change extension to jpg, doc .. etc. .. but also does not help, because it only works on win7 and vistro not on winxp

nerull - July 18, 2011, 6:53 am

for my problem , i found if i del the /Data folder , my server work and i dont have the CMD windows !

for me and for thrustmaster , i think that the compressor is the problem ! please put a tickbox to do it optionnal .

and without the /data folder the only bug is the icon changer that doesnt work

PlastationN - July 18, 2011, 6:58 am

Yes, the data folder is the PROBLEM ! If I delete it, like nerull, that's work.

Works but detected 4/34 without the file /data

Crypter is 0/34 FUD again. Zoner detection has been fixed too. Guys, you need to have the data folder in order to get a FUD crypt, since the compressor is really needed. You don't need to open netz.exe, you just use the crypter it will use netz.exe on its own, press Protect Button wait 2-3 seconds, then wait until compressor has been activated.

If you still can't get a FUD crypt do the following :

Crypt a file without Data folder, then copy crypted file to Data folder and type this :

```
netz -z CryptedFile.exe
```

And tell me if you have more problems after it.

With this new update i have no problem !! Strange i just re-tryed with the last one and not work.

happy to work now !

Type this command where?
CMD?

netz.net appears and disappear quickly, I have no time to write something

[ZERO] - July 18, 2011, 9:04 am

Yes, open command prompt in the Data folder where the netz.exe is.

Then type netz -z yourfile.exe

PlastationN - July 18, 2011, 9:11 am

Oh Zero it is working. The update fixed the problem. My server works, CMD windows doesn't appear anymore. But detected by Avast 5 when I compile and when I launch the server..

guys i think if you have av enabled on your machine, make sure to uncheck the sending of samples in your av because whatever av you use, i think maybe distributing samples of your crypted file. please, dont worry about testing to see if its fud. zero will fix detections. thanks zero, this is still working great for me.

a quick question? do i have to select temp while im building my bs server. i notice that lots of people have a cookie cleaner or similar cleaning programs, so people often try and clear there temp. i would like to be able to select appdata while building bs, that way it stays fud for longer.

-thanks in your time reading this xD.

Please remove from the Cryptor installation bot in folder temp or add choice to the user. Many AV prohibit launching programs from these folders. For example McAfee. (After restart, he blocked bot which is located in the temp, if in Cryptors set "add to startup").

Wait updates.?

What are you trying to crypt? : iStealer 6.0 server

What settings are you using in it? : Settings by default (no bind, no icon)

What settings are you using in Crypter? : Settings by default (no bind, Output randomizer) + icon

What is the version of your Windows? : Windows 7 Professional (x64)

What do you think the problem could be? : Stub not FUD. The problem began when the /data folder update arrived.

Detailed explanation of your problem? : When I compile, Scan and Run my crypted program : my AV Avast 5 detect and delete it. When I scan it on my-avscan, the ratio of the file is 3/34.

Screenshots of your problem? : I think you don't need any screen to understand that the file is infected. I posted a virus scan on the page 45-46 I think

This could be the solution. After you are done crypting your file and the output is not FUD, please copy it to Data folder. In there open command prompt and type into it this ? netz -z YourFile.exe

Waiting for your response if that worked.

condom - July 19, 2011, 12:39 pm

well sorry guys if it doesnt work for you, because while your istealers are failing, bs and darkcomet and cybergate are working. just use a rat, and find the plugins for the password stealers if passwords is what you want id recommend bs and darkcomet and roll with those.

@ Hackerz.pK this crypter works amazing. free updates bro, you can't beat that. zero and manero provide great support for errors you may experience. I never had any problem with this. the only thing you really need to know, is what your doing with the crypter. if you don't, play with it a little bit.

im sure you will enjoy. but please please please! DON'T SCAN IT. Don't even worry about the detections for now because zero will get them. just make your server, whatever you want to do and enjoy. if someone tells u its detected, disregard them and move on. maybe tell zero about the detections, but really, you should not have a need to scan yourself till someone says its detected or watch them scan.

just another thing. Zero, you should make a save settings option in this wonderful program. it will enhance quality of this program because then we wouldn't need to keep adding in all those blocks in the host blocker. Thanks!

He is out because he wanted money for his work, and he got a license for Crypter without my permission. He is also constantly asking for something, and doesn't fit the needs of being a supporter. Good English is a must do.

how do I turn on the Zcrypter that it binds to the server ...

Waisenkind - August 13, 2011, 12:33 pm

've tied the server exe, but exe only server starts.

condom - August 13, 2011, 1:38 pm

that may because your using too big of a file to bind with. i believe you just need to build a crypted server without any bind and open up run type "iexpress" and bind your server this way. i hope this helped :)

I did exactly as Manero's movie, before it was completely undetectable but now NOD 32 detects it..

[ZERO] - August 20, 2011, 2:00 am

Try these settings, and tell me if detection still exists!

Please remove from the Cryptor installation bot in folder temp or add choice to the user. Many AV prohibit launching programs from these folders. For example McAfee. (After restart, he blocked bot which is located in the temp, if in Cryptors set "add to startup")

Do you know why the price is 40\$?

1. Always works on files that are supported
2. Its almost all times FUD, except when 1 detection appear, but I try to fix it as soon as possible.
3. Updates are free and weekly.
4. We exist for about a year, this was Stealth Crypter, and now we have 0 Crypter, so we're not some random kids that try earn quick cash with some bad crypter. We keep up with our projects and don't shut them down.

These are the reasons of 40\$.

Working on it, as soon as my-avscan gets back up, will manage to fix it. :)
New update released, NOD bypassed & new anti-cracking system included. Software is now more secure.

Does this work on Predator Pain logger sir ?

really would buy this one if it would work with predator pain logger :(

as most keyloggers corrupts predator pain logger leaving most features disabled :(

If it works with predator pain logger sir i would buy lifetime :(.

Not have vbc.exe..

Download vbc.exe -> <http://www.mediafire.com/?c01ktkcrytrc5wg>
Copy vbc.exe to "C:\Windows\Microsoft.NET\Framework\v2.0.50727\"

PoisonKnife - November 11, 2011, 1:49 pm

It really is a fantastic crypter. Thank you for the update!

condom - November 12, 2011, 1:43 am

thanks for the update zero.

Scanwatch service bugs with following AVs sometimes : Panda

Bullguard

So, don't think crypter is not FUD if those detections appear, since this is a well known bug with myav-scan Scanwatch service.

U STRAIGHT RATCHY - November 15, 2011, 6:59 am

Hey man, Does this Crypter have a binder to it? Because I'm looking to buy a Crypter (with a binder) that will work with XR Hostbooter, and Cybergate. Let me know, thanks!

paulos - November 15, 2011, 7:30 am

The start up function dosent work?

Yes it does have a binder.

@paulos - Startup function works properly.

@paulos - Startup function works properly.

It does not work for me, which settings do you use then?

nicoftw - November 18, 2011, 10:30 pm

Is this FUD? Could someone please provide me a scan link of what it is atm , I see a free one was released but I want the paid one.

paulos - November 19, 2011, 4:09 am

Hey guys :D

Can somebody plzz help me

I want to crypt my darkcomet server, but i dont no the perfect settings for it.

- If someone have the correct settings, then plzz feel free to pm me ;)

Thanks in advance

Login server moved to new location, as well we launched a new update containing these changes. Update will be ready for download as soon as old server gets back up. Expect to be back in hour or two..

cracked again

Ok, so I guess I'll have to develop a new security again.

PoisonKnife - November 25, 2011, 4:41 pm

When logging in to the newest crypter, I get the message:

"Error!
Cannot establish connection to license server!"

Why is that?

Please try again.

It's due to host-my laptop. I have license server hosted at my place, since crackers were too persistent with my Crypter, so now protection is all based on Tcp connection. Sorry for that downtime, I sometimes forget to activate login server when I switch my laptop from one place to another.

Sorry, won't happen again! ?

Ok dont work anyway for blackshades...

give me settings for BS

toshort characters

DeMoNi - November 27, 2011, 1:10 pm

Is it fully working with Insomnia and FUD sir ?

And when you bind you server that has startup to another .exe, does it launch the binded another.exe on startup ?

Thanks ;)

there is a option in crypter run every time your binded file when server start..

Versace - November 27, 2011, 9:50 pm

What's the recommended BS settings for this?

I don't think startup ever worked (crypter) for me.

Yes but I want it to not be launched on STARTUP (the binded one only)

And is it FUD + does it work with Insomnia ?

PoisonKnife - November 28, 2011, 8:58 am

1. I get this error message agian: "Error!

Cannot establish connection to license server!"

2. What's the difference between Installation and Startup? And what should I go with using CG RAT?

paulos - November 28, 2011, 12:56 pm

I also get the error message agian: "Error!

Cannot establish connection to license server!"

paulos - December 1, 2011, 10:53 am

I still got this error message when i try top run the crypter :-/

PoisonKnife - December 3, 2011, 6:33 pm

I still get the error message. Mate I need your fantastic crypter up and running :)

PoisonKnife - December 5, 2011, 3:12 pm

Now I'm able to log in but when I'm trying to crypt the file I get this error message:

"Error!

Cannot connect to Source server!"

When can I expect it'll work? I am tired of all these problems !!

M3dlc4L - December 6, 2011, 9:06 am

Got right the same Problem...Its really annoying now...

M3dlc4L - December 11, 2011, 1:50 pm

:(dude i paid a lot of money for this crypter....is it too much then, that you fix this problems? I can not log in all the time. Sometimes I can and then I get this cannot connect to source server problem...please fix this!

PoisonKnife - December 13, 2011, 12:22 am

I can't login to the crypter. It tries to connect, but nothing happens. It just loading...

I was able to login yesterday, but no matter which configuration I tried the crypter ruined my server.

Can you do something so the crypter actually work and crypt the files instead of ruin them + try to fix the login challenges.

If it's not fixed soon and become more stable, I'll have to use another crypter.

Hold on guys, I'm working on a new crypter, that is going to be called Imperium Protector. Also, we will have a new system here, users will pay from now on membership access on my site to get my software, but all of you guys will receive best licenses on the site. Please go to www.bejnz.com and PM me your username so I can activate membership on it. ?

LiveSupportShop - December 14, 2011, 9:59 am

Anonyme have an Config for BlackShades please ?

M3dlc4L - December 18, 2011, 2:51 am

I registred myself on bejnz, and zero activated my account, but i cant download, because theres the error "a valid account is needed".

How long I have to wait this time ?

NuclearWinter2011 - December 27, 2011, 4:21 am

Does anybody know an estimated time on getting your account activated on bejnz?
